INTRODUCTION TO VALLEN’S HISTORY

Vallen was first founded in Houston, Texas in 1960 by Valarie (Val) and Leonard (Len) Bruce – hence the name VALLEN. It initially grew with a particular focus of selling safety products to the mining, oil and gas sector in Texas.

Over the years, Vallen has grown steadily, helped along in 1970 when the American Congress passed the Occupational Safety and Health Act (OSHA). As business continued to grow, they purchased and set-up headquarters on a five acre property in northwest Houston, with the construction of a 50,000-square-foot Corporate and Distribution Headquarters in 1978.

Valerie and Leonard directed the Vallen Company to the next step by going public in 1979, raising funds to continue growth and allow for expansion. In 1992 they purchased a 50% share in a Mexican company, spreading their international wings. Further purchases allowed for expansion into Canada and Vallen was well on its way to becoming a truly international corporation.

With over $300 million in sales and Leonard approaching 80, the business was well into manufacturing their own brands and distributing products throughout North America, including Canada and Mexico.

Today, Vallen products are trusted and sold around the world. It is known as the largest safety brand built on a heritage of quality and value. In Australia the L&H Group is proud to provide you with the quality of Vallen products, which have been designed, specified and made for Australia's unique environment and working conditions.

The Vallen safety catalogue is your essential guide to the Vallen range, which are stocked by the L&H Group – another example of “Our Promise, Great Service!”

If you have any questions, please talk to your local branch about our full range of products and how we can continue to be a value adding supplier to your business.

ABOUT EN388

What is the EN388?

The EN388 is a compilation of 4 tests (abrasion, cut, tear, puncture) for determining the mechanical protection levels of Personal Protection Equipment (PPE) materials. It is most frequently used in European markets, but has been making its way into the International market as a widely accepted standard for measuring protective properties of industrial PPE.

PPE that use the EN388 method are marked with a CE label and 4 numbers corresponding to the scores received in each of the mechanical tests. Each test rates the material on a scale of 1 (low) to 4 (high), except in

How it works

Gloves are tested in accordance with European Standards EN388. Under the guidelines of EN388 gloves are tested against Abrasion, Cut, Tear and Puncture with results measured against the below table and recorded on applicable styles.

The test results always run in order of Abrasion – Cut – Tear – Puncture. Cut levels are recorded from 1-5 whilst other elements are recorded 1-4.
### Mechanical Hazards EN388
- Abrasion resistance: 0 - 4
- Blade cut resistance: 0 - 5
- Tear resistance: 0 - 4
- Puncture resistance: 0 - 4
- Impact resistance: Pass or Fail
- Antistatic: Pass or Fail

### Chemical & Micro-Organisms EN374
- EN347-2 resistance to penetration by micro-organisms. Referred to as acceptable quality level (AQL): 1 - 3
- EN374-3 resistance to chemical hazards (permeation)

### Protection from Cold EN511
- Resistance to convective cold: 0 - 4
- Resistance to contact cold: 0 - 4
- Permeability to water: 0 - 4

### Protection from Heat & Fire EN407
- Burning behaviour: 0 - 4
- Contact heat: 0 - 4
- Convective heat: 0 - 4
- Radiant heat: 0 - 4
- Small molten metal splash: 0 - 4
- Large molten metal splash: 0 - 4

### Protection from Radioactive EN421
- Ionised rays and radioactive contamination
Glove sizes in accordance with EN420

It is very important that the correct glove size is provided and worn and clear guidance is provided to ensure that sizing is right first time. Two measurements are required to establish the correct size – the hand diameter (A) and length (B = distance between wrist and tip of middle finger). Measurements are given in mm.
