Why choose Covers

Covers vision is to be our customers’ preferred supplier of timber, building and allied materials...

We aim to achieve this in various ways...

• By building lasting partnerships with you, our customer, meeting your requirements promptly, courteously, efficiently and professionally.

• By ensuring that the quality of our service and products give us a leading edge in the market.

• By maintaining a competitive advantage, embracing leading production and operational methods and investing in constructive change.

• By supplying a wide range of quality goods, either from our own stocks or direct from suppliers, at competitive prices.

• By providing technical advice on all products we supply.

• By creating an environment where everyone feels valued and experiences job satisfaction through teamwork and continuing individual development.

• By recruiting and retaining the highest quality staff as an equal opportunities provider.

To obtain an estimate or to place an order there are four easy options:
1. Visit your local depot.
2. Telephone your local depot.
3. Fax your request or order to your local depot.
4. Email your local depot with your request or order.

Please note we accept: MasterCard, Maestro, Switch and Visa cards. Depots details and account information are on the reverse of this brochure.
Our Environmental Policy

- Seek to prevent pollution
- Seek to minimise waste
- Identify and manage environmental risk and hazards
- Identify and influence the choice of construction materials and working methods
- Plan best practice working
- Make better use of the working environment
- Make better and efficient use of resources
- Set environmental standards
- Promote and provide environmental training
- Encourage pro active participation in environmental activities
- Avoid material waste, water waste, energy waste, vehicle waste, labour waste
- The company is committed to an environmental policy and seeks continuous improvement in performance
- In our organisation there is a continuous learning curve
- We are FSC® and PEFC certificated and purchase the majority of our timber from approved managed certified forests

Please recycle
Decking creates a natural link between house and garden, making the most of an under-used but valuable area outdoors.

It provides a perfect area for entertaining, barbecues or just relaxing on those long sunny days. Designed to fit any home and garden, an outdoor deck is a cost effective way to make extra living space.

Enhancing any garden, decking can be enjoyed by everyone in the family and will be durable, long-lasting, easy to maintain and continue to look good for many years to come! For a simple ‘patio style’ deck or if you prefer, a more custom designed look, you will find everything you need to create the deck you’ve always wanted with decking from Covers.

This brochure is an overview of the many variations of decking we have available and what decking is best suited to your needs.
CoverDek is our own branded Softwood and Hardwood decking that is produced in our mill at Chichester. The CoverDek system we provide includes Baserails, Newells, Handrails Spindles and Joists.

The CoverDek system we have designed will enable the end user to construct a complete deck at an affordable cost.

Composite decking provides a natural looking surface that is easy to clean and will last year after year. No need to paint, seal, stain or even waterproof. Composite is ideal wherever exceptional durability and weather resistance are required.

**Composition**
Made from 90% recycled hardwood and polyethylene products, Composite is eco-friendly and long-lasting.

Millboard Enhanced Grain

The enhanced grain boards create a classic decking area that will complement both traditional and contemporary settings. The wood grain finish which is individually hand-enhanced, is stylish and durable even in the most demanding of environments. Available in four attractive colours and a choice of widths and lengths.

Composition
A blend of reclaimed materials bonded with a hybrid polyurethane polymer and fibres for strength and durability.

Millboard Weathered

Adding character and style, these charming boards create decking areas of timeless beauty as they have been made from manufactured moulds created from hand picked antique oak boards of over 100 years old.

Available in two character-full colours, the boards have Lastane™ anti-slip surface making them not only look good but also safer in wet conditions.

Composition

A blend of reclaimed materials bonded with a hybrid polyurethane polymer and fibres for strength and durability.

Millboard Fluted

Taking inspiration from the classic style of conventional decking but made from low-slip Lastane™, our fluted boards bring this design right up to date with crisp clean lines that define and enhance the beauty of the oak grain.

Available in two attractive colours, fluted is sure to create an eye-catching deck in all situations.

Composition

A blend of reclaimed materials bonded with a hybrid polyurethane polymer and fibres for strength and durability.

Millboard Lasta Grip 40 & Last Grip 50

For use wherever extra slip resistance is required Lasta Grip 40 and 50 have two integral textured strips moulded into resilient softer Lastane™ surface, covering over a third of the surface area.

Excellent slip resistance is achieved without the risk of personal injury inherent in highly abrasive sharp grit strips. The non-porous Lastane™ surface repels moss and needs no maintenance other than occasional wash down.

The surface helps deaden footfall and furniture movement noise, making them the perfect choice for public places, commercial and leisure applications.

Composition
A blend of reclaimed materials bonded with a hybrid polyurethane polymer and fibres for strength and durability.

Millboard Board-and-end grain

The subtle design of board-and-end grain gives a distinctively different image to any decking area and is entirely unique in the marketplace. Taken from the finest oak and timber samples, these boards portray the beauty of contrasting natural wood characteristics with the end grain, whilst retaining the stability and safety that Millboard is renowned for, with the resilient Lastane™ surface.
Millboard Half Weave

Truly bringing interior design outside, half weave combines the appearance of decking boards with shorter cross pieces in one board that add the character of parquet flooring. Blending perfectly with most settings, this exclusive design creates a relaxing atmosphere that is perfect for any prestigious outdoor area.
Available in two attractive colours, all boards have Lastane™ resilient, anti-slip surface.

FinnForest WalkSure™

WalkSure™ low slip decking combines rubber and pressure treated softwood deck board. The resulting product provides not only an attractive and colourful alternative to traditional timber decking but also a safe, low slip surface in wet or dry conditions, ideal for play areas and pool surrounds. Other applications include public walkways, outdoor smoking facilities, leisure complexes, hotels, pubs and clubhouses.

FinnForest GrasseDeck™

GrasseDeck® brings a new dimension to decking, creating a softer aesthetic and working well in contrast to hard landscaping materials. Elegant, sturdy and featuring artificial ‘grass’ on treated softwood boards, GrasseDeck® is easy to maintain and is ideally suited for domestic use within gardens, courtyards, balconies and around spas and swimming pools.

FinnForest
Balustrading
rails & posts
Available to order

Balustrading rails & posts Classic softwood balustrading can easily be stained to match the decking and fencing of your choice. Choose from the solid reliability of the Roman column balustrade, the elegant lines of the turned spindle or, for a more clean, modern look, the square spindle. Each one is finished to the highest standard and guarantees you years of enjoyment in your garden.

Square spindle

Turned spindle

Roman column  → page 17 for details on constructing deck board end posts
FinnForest Tuscany balustrade kit

An elegant railing combining the natural beauty and strength of wood with curved aluminium balusters to create a modern blend of style and convenience. Pre-drilled for ease of installation, complete with fixings. Posts not included.

FinnForest Traditional balustrade kit

A wooden hand and base rail complementing a set of smooth black aluminium balusters to create a timeless, classic appeal. Pre-drilled for ease of installation, complete with fixings. Posts not included.

FinnForest Clearview balustrade kit

A glass railing system with high quality preservative treated softwood top and bottom rails, a contemporary treated softwood cap rail and seven clear tempered safety glass panels. This kit is pre-drilled for ease of installation. Posts not included.
Tips on Decking

1. Select joinery grade decking
   Select joinery grade softwood decking by identifying the tight growth rings along the end grain of the joist or board – a slow grown timber will provide a far cleaner and more precise finish when machining over a non slow-grown timber.

2. Select the best timber
   Ensure the decking products you purchase are of a high quality and designed to last for lasting durability.

3. Maximise the deck’s life
   Ensure any cut timber or drilled holes are treated with a timber preservative. A thorough coat of treatment only takes a moment and will prolong the life of the deck. This procedure is often a condition reflected in the product’s guarantee so worth following.

   Use a good landscaping fabric underneath your deck to prevent weed growth

4. Avoid water pooling
   This is down to your planning and preparation of the joist perimeter structure. Using a simple spacer acts as an effective guide and a 2mm fall in gradient of the joist in every metre is sufficient to ensure the rain water falls away and prevents any pooling, reducing maintenance too.

5. Decking up to door sills and walls
   Decking is extremely versatile and ideal for running up to entrance doors or around the perimeter of buildings.

   Install the joist structure and deck boards so they are clear of the building by at least 15mm and always below the damp course.

6. ‘Boxing-in’ balustrade posts
   To ensure a safe and secure newel post for balustrading, use the strength of your joist structure to ‘box in’ the post, using cut noggins affixed to the joist and post with timber deck bolts or coach bolts. If installing a deck frame around the perimeter, be sure to allow for your joist tram lines.

   Don’t forget to treat any cut edges with an End Grain Preservative
Tips on Decking

7. Mix the deck finishes

Alternative deck boards, for example GrasseDeck® or WalkSure™ not only add a striking look to the area but also play a functional role in reducing the amount of debris and dirt transferred from footwear onto the deck. Ideal for steps, walkways and pool surrounds.

8. Fixing deck boards

To prevent the timber cupping, it’s always best to fix boards down securely with two fixings not just one. Screws tend to provide a more secure fixing. It’s recommended to drill a pilot hole first before screwing down, alternatively use a self countersinking screw which will save time.

Allow an expansion gap of around 5mm between each deck board, this will allow for expansion of the timber and assist with drainage.

Position the fixing at least 20mm from the edge of the deck board. When joining two cut deck boards together in a run, fix with screws 10mm from the end of each board, at an angle to ensure secure fixing into the joists below.

9. Balustrade kits save time

To restore an old and tired deck or add perspective to a new one, use balustrade kits that have pre-drilled hand and base rails and all the necessary fixings. Traditional and Tuscany kits from Finnforest are ideal. The balusters are finished in a powder coated, durable black paint and can be installed in no time.
Important Information About Your Decking

1. Always pre-drill pilot holes prior to fixing with screws.
2. Use stainless steel screws and fixings to eliminate rust stains.
3. Keep posts out of contact with the ground or standing water.
4. To maintain the colour of your deck treat it with a pigmented stain or oil.
   Without treatment, exposure to UV light will cause the colour to fade.

Tools required
Spade
Straight edge or chalk line
Spirit level
Suitable fixings
Drill and hammer
Screwdriver
Hand/Power saw
Metal post supports (optional)

Safety First
Wear gloves to avoid splinters.
Avoid prolonged inhalation of sawdust from wood.
When using power tools wear safety goggles to protect your eyes from the possibility of flying particles.

step 1 Preparing the site
Mark out desired area for deck with wooden pegs and string. This will help you visualise the size of the finished deck and act as a guide to preparing the site. All earthed areas should be covered with weed control membrane to stop weeds and other growth. If your ground is flat and level you can proceed to Step 3. However, if you wish to raise the deck from ground level or the ground is uneven or sloped, you should proceed to Step 2.

step 2 Raised deck
If you choose to raise your decked area, the raised deck will need to be supported with posts. In most circumstances a distance of 1.8m between posts should be sufficient. This may vary depending on the joist size, fixings used and the potential loading. Posts will be required to support central joists as well as the perimeter frame.
If required posts can be fixed by either concreting the post directly into the ground or using metal supports* (see diagram opposite). Using a level, find the desired floor height on the posts and mark this accordingly. This should provide you with the position of the top of your deck board and therefore enable you to identify the joist position for fixing. Secure the joists using suitable fixings, for example joist hangers, screws or coach screws.
step 3 Framework
Cut the side joists (A) that will form the sides of the deck to the size you require and mark the position of the floor joists (B) at 400mm centres.
Cut the deck floor joists (C) to length and place the floor joists in position where the deck is required. Assemble the framework using 3 screws, or alternatively joist hangers, per joist end.
Please note: screwing through the side beam into the end of joists is only recommended for ground level decks.

step 4 Fixing deck boards
Cut your deck boards to the required length. Place the first board with the end flush with the face of the front of the deck. Fix this first board to each joist and always pre-drill a pilot hole prior to fixing. The gap between your boards should be 5-8mm for drainage*.
Place the next board parallel to the first and continue in the same way until the last board is laid.
*Please note: this will vary for Composite decking due to the different fixing system.

Use for 140mm Composite deck boards

**Please note:** the number of boards may vary depending on the design and shape of your deck.

Check the amount you need before you buy, as you may need additional boards.

The tables above include the gaps required between the boards.

A simple guide to installing a balustrade on your decked area.
Please note: if you have purchased a balustrade kit, please refer to the separate instructions included in the pack.

**Square or turned balustrade**
1. Attach the base rails in between the posts using angle brackets, at a maximum of 99mm height above the deck
2. Cut the fillet section into maximum 99mm segments
3. Inlay segments of 99mm fillet followed by a spindle-sized gap. Fillets should be secured to the base rail with panel pins
4. Repeat this process for the handrail
5. Insert all of the spindles into the gaps left between the fillet and cover with the hand rail.
   You may wish to use wood glue before inserting the spindles
6. Fix the handrail to the posts using angle brackets
7. The minimum handrail height for a balustrade on a domestic deck is 900mm

**Roman columns**
1. Screw down through deck board to roman column
2. Screw up through deck board to joist above; this ensures no screws are visible at the top

**Roman column deck board end post - assembly**
1. It is important to treat any exposed timber with a suitable end grain preserver to help protect against rot and decay
2. Cut four lengths of deck board to the desired height to match your roman column wall
3. Secure these together as shown (left) to create a complete post

**Roman column post cap - assembly**
- Cut two triangles from the end of a deck board; these will form the top of the post

Please note: if you have purchased a balustrade kit, please refer to the separate instructions included in the pack.

**Durafix Trimhead Fixings**

That’s how easy the ‘hidden’ fixing is. Just screw straight in, no pre-drilling, counter sinking or fiddly clip fixings. The unique Lastane material closes back over the Millboard Trimhead fixing, leaving a virtually indistinguishable hole or at the most a very small entrance hole.

All our recommended board fixings have self-cutting tip and a torx drive head for ease of use. Ensure the head is 5mm below the surface.

Ronseal Decking Stain is hardwearing, scuff resistant formula, resists cracking, peeling & blistering. Quick Drying - rainproof in 90 minutes, out peforms conventional woodstains on decking. Ronseal Decking Seal provides a clear protective barrier that repels moisture and helps protect the timber from water damage, while allowing the wood to breathe. It’s clear finish allows decking to weather naturally over time.

Ronseal Decking Restorer is the quick and easy way to safely restore grey or weathered decking back to its natural appearance with the minimum of effort and fuss. The unique non-acidic gel formulation will brighten and revive dull and weathered timbers to leave your deck looking clean, newly restored and transformed to it’s original colour.

Ronseal Decking Protector resists greying, surface mould and algae growth. It is a unique wax enriched formula that creates a superb barrier against water penetration and helps prevent discoloration by protecting the deck against constant wetting, drying, splitting and swelling. Ideal for spraying. Provides the ultimate waterproofing protection, Unique wax enriched formula creates a superb water resistant barrier.

Ronseal Decking Oil is a durable scuff resistant tinted oil that forms a waterproof barrier to protect against weathering, warping, swelling, drying and splitting. It resists mould and algae growth and its fade resistant finish protects against UV rays. For use on hardwood and softwood decking.

Ronseal Cleaner & Reviver cleans and revives timber decking, removing dirt, grease, fungus, stains, algae and mildew. It opens the pores of the wood allowing maximum adhesion of coatings for a lasting finish. Ideal for use prior to applying a decking finish.

Ensele Brush-On End Grain Preservative is a water based preservative based on copper/triazole technology. Whenever Tanalised timber is cross-cut, notched or bored on site, the exposed surfaces must be re-treated with Ensele end-grain preservative to maintain the integrity of the protective system.

Weedex 70 is suitable for tough perennial weeds, flower and shrub beds, vegetable beds, aggregate areas (paths etc) under decking, containers and baskets.

**FastenMaster GuardDog Exterior Wood Screw**

GuardDog is a versatile exterior wood screw used for a variety of applications. The PoziSquare™ Drive eliminates the strip out of a fastener. Fully tested, fully guaranteed in ACQ, Cedar, Redwood and Copper Azole.

**The design features of this product include:**

- Versatile head style can be used with the PoziSquare Drive, #2 square drive, and Phillips drive
- Guaranteed corrosion resistance
- Colour matched to blend in with the new pressure treated decking
- Sharp threads quickly penetrate lumber
- Free PoziSquare driver bit included
- Available in 40mm, 50mm, 63mm & 90mm

---

**Fischer Decking Screws**

**The design features of this product include:**

- Unique thread design provides exceptional holding power.
- No pre-drilling as these screws can drive into the hardest wood.
- Spiral flutes are suitable for end grain applications
- Weather resistant coating make them ideally used for all exterior timber applications.
- Packed in a handy clear plastic carry box, which can be filled and re-used again.

---

**Spax® Wirox Screws**

An excellent quality construction screw with universal applications. The Wirox coating provides a high level of surface hardness to give greater resistance to coating damage, and possesses anti-corrosion resistance 10 times greater than yellow zinc.

**The design features of this product include:**

- Environmentally friendly: chrome vi-free
- No pre-drilling required
- No splitting even when close to edge

---

**Paslode Quattro Woodscrews Zinc Plated**

Specifically developed to ensure installation is simple and hassle free. With no pilot holes required and no damage caused to wood, MDF and chipboard surfaces.

**The design features of this product include:**

- Zinc plated Internal Wood Screws
- Quattro thread shank - for excellent cut into timber fibres
- Profpoint cutting tip - minimises the risk of splitting
- Countersunk ribbed head - beautiful finish with no surface damage
- TX Drive recess - high torque for powerful driving (Free bit in every box)

Timber
Our reputation as the South of England’s Timber Specialists has been built on providing our customers with an unrivalled range of quality timber, knowledgeable staff and a reliable delivery service. We import timber direct from well managed and sustainable forests and offer FSC® and PEFC certified goods wherever possible. Our investment in special milling technology allows us to make the claim…... "If you can draw it, we can produce it". We can provide priming, sheet cutting; stress grading and timber treatment systems to ensure our timber will meet your specification. We can also treat timber for both internal and external applications.

Softwood Range
Kiln dried and graded carcassing • Preservative treatment • CLS studding • Treated battens • Scaffold boards Cedar shingles Shiplap and TGV • PAR and mouldings • Top grade sawn Redwood • Decking • Flooring

Hardwood Range
European Oak • Tulipwood • Iroko and Utile • Sapele and Meranti • American White Oak & Ash American Cherry • White Beech • Steamed Beech • Idigbo • American Black Walnut

Heavy Building Materials
Building on our experience as a leading independent supplier of heavy and related building materials, we have a great understanding of both trade and retail needs. Our knowledgeable staff can source almost any item for you and give advice on the most suitable products to use. We offer a consistently reliable delivery service from stock and provide a direct sales service. Our quotation departments provide a fast response for enquiries for direct to site loads and ex-depot trade. Aggregates are available either loose, bagged or in non-returnable bulk bags. Our major Depots hold a wide range of bricks relevant to local requirements. All depots hold stocks of cement, plasters, plasterboard, insulation and drainage and at Chichester specialist stocks are held of new and second hand clay and cement roof tiles. Delivery vehicles are equipped with mechanical handling equipment to ensure fast and efficient off loading at your site.

Hardware & Decorating
Our vast range of lightside products is forever growing! We are constantly seeking new products, ranges and areas which we see as beneficial to our customers. Our skilled sales office staff are equipped with product libraries to assist the sourcing of special and unusual orders. All of our depots are staffed by experienced individuals who all have specialist knowledge of the products we sell.
Landscaping
Covers stock an extensive range of exciting landscaping materials from the leading manufacturers. Our inspirational selection of natural stone, concrete paving, block paving, decorative aggregates, decking, fencing and garden buildings will ensure you find the perfect products to help you transform your garden or driveway. Covers landscape centres all boast a diverse range of products on display to assist you with your selection and knowledgeable staff who can calculate the quantities you require for your project.

Flooring
Nothing beats the feel of good flooring under foot, whether it’s solid, engineered or laminate. Practical, hard wearing and requiring minimal maintenance, the best solid flooring has remarkable resilience to the knocks and bumps of everyday life – and can last for decades. At Covers, we’re able to offer over 20 different types of timber and timber-style floor coverings from major manufacturers and importers, with knowledge and installation advice to match.

Kitchens and Bathrooms
Our dedicated kitchen and bathroom showrooms at Chichester and Bognor Regis offer an array of traditional and contemporary designs to accommodate all tastes and budgets. Covers experienced staff will help you through the decision making process and will provide you with a free design and quotation.

Trade Kitchens and Bathrooms
At Covers, we never forget that kitchens and bathrooms sell houses. That’s why we offer a vast selection of kitchens, bathrooms, appliances and accessories to reflect all the very latest design trends. With ranges from leading suppliers such as Sheraton, Symphony and Ideal Standard, we have everything you need. We will seamlessly guide you through the process of selecting a new kitchen or bathroom for your latest development, conversion or extension. Consultation, design, quotation, delivery. We’ve got it all under one roof – with a patient and responsive attitude to service.

Doors, Windows and Conservatories
We’re the area’s largest stockist of quality doors and windows with dedicated showrooms in Chichester, Bognor Regis and Lewes. We stock high technology doors and windows from world class suppliers like Premdor, Jeld-Wen, Vicaima, Johnson Aldridge and many more. Covers are a proud member of the British Woodworking Federation, which is responsible for the quality control and development of doors and windows in the UK.
Covers also supply an excellent range of made to measure UPVC products, such as doors, windows and conservatories. Fibreglass doorsets are also available in various colours and styles.

Eco Centre
Covers has put green issues to the top of our agenda and opened the South East’s first ever Eco Centre. Customers can now view the very latest eco building products and appliances under one roof. The Eco Centre is a vital resource for consumers to learn about how to make their home energy efficient and eco friendly.

How would you like to pay?

Cash or Account

Trade Card: If you prefer to pay as you go. You will get trade terms, which means you don’t have to negotiate every time you pay.

Credit Account: We offer a 30 day account to qualifying customers on trade terms, so that you can buy everything at the right price, with account facilities of invoices and statements to your office and planned payments dates.*

* Credit references required. Terms and conditions apply.

Depot Account: This offers the benefits of a Credit Account in terms of invoices and statements but no credit is offered. Ideal for a small trader who may send one of their team to collect goods and does not wish to give them cash or to lose the invoices.

You can download the application forms for the above from our website www.covers.biz.
