Introduction

The Morningstar Category™ classifications were introduced in 1996 to help investors make meaningful comparisons between mutual funds. Morningstar found that the investment objective listed in a fund’s prospectus often did not adequately explain how the fund actually invested. For example, many funds claimed to be seeking “growth,” but some were investing in established blue-chip companies while others were seeking growth by investing in small-cap companies.

The Morningstar Category classifications solved this problem by breaking portfolios into peer groups based on their holdings. The categories help investors identify the top-performing funds, assess potential risk, and build well-diversified portfolios. Morningstar regularly reviews the category structure and the portfolios within each category to ensure that the system meets the needs of investors.

Morningstar assigns categories to all types of portfolios, such as mutual funds, variable annuities, and separate accounts. Portfolios are placed in a given category based on their average holdings statistics over the past three years. Morningstar’s editorial team also reviews and approves of all category assignments. If the portfolio is new and has no history, Morningstar estimates where it will fall before giving it a more permanent category assignment. When necessary, Morningstar may change a category assignment based on recent changes to the portfolio.

The driving principles behind the classification system are as follows:

- Individual portfolios within a category invest in similar types of securities and therefore share the same risk factors (e.g. style risk, prepayment risk).
- Individual portfolios within a category can, in general, be expected to behave more similarly to one another than to portfolios outside the category.
- The aggregate performance of different categories differs materially over time.
- Categories have enough constituents to form the basis for reasonable peer group comparisons.
- The distinctions between categories are meaningful to investors and assist in their pursuit of investing goals.

In the United States, Morningstar supports 90 categories, which map into seven broad asset classes (U.S. Stock, Balanced, International Stock, Alternative, Commodities, Taxable Bond, and Municipal Bond). The broad asset class and category indexes listed with each category are used in Morningstar’s tools and reports to show performance relative to a benchmark. In addition, Morningstar has two categories for Money Market funds: Taxable and Tax-Free.
Recent Changes

September 30, 2003
► Replaced the Foreign Stock category with five new categories: Foreign Large Value, Foreign Large Blend, Foreign Large Growth, Foreign Small/Mid Value, and Foreign Small/Mid Growth

May 31, 2004
► Replaced the Muni Single State Int/Sh category with two new categories: Muni Single State Interm and Muni Single State Short
► Added Stable Value category (currently used for custom funds and separate accounts only)

February 28, 2006
► Added Inflation-Protected Bond, Long-Short, Target Date 2000-2014, Target Date 2015-2029, and Target Date 2030+
► Added the Balanced broad asset class

September 30, 2007
► Added Leveraged Net Long and Market Neutral to the separate accounts and custom funds databases

July 31, 2008
► Added Global Real Estate and Currency
► Added the Alternative broad asset class
► Removed Muni Florida

January 30, 2009
► Introduced Target Date categories in five year increments for years 2011-2050
► Added Retirement Income
► Added Miscellaneous Sector

June 30, 2009
► Added the Commodities broad asset class and six commodities categories: Broad Basket, Energy, Precious Metals, Agriculture, Industrial Metals and Miscellaneous
► Added Consumer Discretionary, Consumer Staples, Equity Energy and Industrials
Large Value, LV
Large-value portfolios invest primarily in big U.S. companies that are less expensive or growing more slowly than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large-cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Broad Asset Class Index: S&P 500 TR
Category Index: Russell 1000 Value TR USD

Large Blend, LB
Large-blend portfolios are fairly representative of the overall U.S. stock market in size, growth rates, and price. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large-cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate. These portfolios tend to invest across the spectrum of U.S. industries, and owing to their broad exposure, the portfolios’ returns are often similar to those of the S&P 500 Index.

Broad Asset Class Index: S&P 500 TR
Category Index: Russell 1000 TR USD

Large Growth, LG
Large-growth portfolios invest in big U.S. companies that are projected to grow faster than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large-cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). Most of these portfolios focus on companies in rapidly expanding industries.

Broad Asset Class Index: S&P 500 TR
Category Index: Russell 1000 Growth TR USD
U.S. Stock (continued)

**Mid-Cap Value, MV**
Some mid-cap value portfolios focus on medium-size companies while others land here because they own a mix of small-, mid-, and large-cap stocks. All look for U.S. stocks that are less expensive or growing more slowly than the market. The U.S. mid-cap range for market capitalization typically falls between $1 billion-$8 billion and represents 20% of the total capitalization of the U.S. equity market. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

- Broad Asset Class Index: S&P 500 TR
- Category Index: Russell Midcap Value TR USD

**Mid-Cap Blend, MB**
The typical mid-cap blend portfolio invests in U.S. stocks of various sizes and styles, giving it a middle-of-the-road profile. Most shy away from high-priced growth stocks, but aren't so price-conscious that they land in value territory. The U.S. mid-cap range for market capitalization typically falls between $1 billion-$8 billion and represents 20% of the total capitalization of the U.S. equity market. The blend style is assigned to portfolios where neither growth nor value characteristics predominate.

- Broad Asset Class Index: S&P 500 TR
- Category Index: S&P Mid Cap 400 TR

**Mid-Cap Growth, MG**
Some mid-cap growth portfolios invest in stocks of all sizes, thus leading to a mid-cap profile, but others focus on midsize companies. Mid-cap growth portfolios target U.S. firms that are projected to grow faster than other mid-cap stocks, therefore commanding relatively higher prices. The U.S. mid-cap range for market capitalization typically falls between $1 billion-$8 billion and represents 20% of the total capitalization of the U.S. equity market. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

- Broad Asset Class Index: S&P 500 TR
- Category Index: Russell Mid Cap Growth TR USD
**Small Value, SV**
Small-value portfolios invest in small U.S. companies with valuations and growth rates below other small-cap peers. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small-cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Broad Asset Class Index: S&P 500 TR
Category Index: Russell 2000 Value TR USD

**Small Blend, SB**
Small-blend portfolios favor U.S. firms at the smaller end of the market-capitalization range. Some aim to own an array of value and growth stocks while others employ a discipline that leads to holdings with valuations and growth rates close to the small-cap averages. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small-cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate.

Broad Asset Class Index: S&P 500 TR
Category Index: Russell 2000 TR USD

**Small Growth, SG**
Small-growth portfolios focus on faster-growing companies whose shares are at the lower end of the market-capitalization range. These portfolios tend to favor companies in up-and-coming industries or young firms in their early growth stages. Because these businesses are fast-growing and often richly valued, their stocks tend to be volatile. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small-cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

Broad Asset Class Index: S&P 500 TR
Category Index: Russell 2000 Growth TR USD

**Consumer Discretionary, CD**
Consumer discretionary portfolios seek capital appreciation by investing in equity securities of U.S. or non-U.S. companies in the consumer discretionary sector.

Broad Asset Class Index: S&P 500 TR
Category Index: S&P 1500 Cons Discretionary TR
Consumer Staples, CC
Consumer staples portfolios seek capital appreciation by investing in equity securities of U.S. or non-U.S. companies that are engaged in the manufacturing, sales or distribution of consumer staples.

Broad Asset Class Index: S&P 500 TR
Category Index: S&P 1500 Cons Staples TR

Communications, SC
Communications portfolios concentrate on telecommunications and media companies of various kinds. Most buy some combination of cable television, wireless-communications, and communications-equipment firms as well as traditional phone companies. A few favor entertainment firms, mainly broadcasters, film studios, publishers, and on-line service providers.

Broad Asset Class Index: S&P 500 TR
Category Index: DJ US Telecom TR USD

Equity Energy, EE
Equity energy portfolios invest primarily in equity securities of U.S. or non-U.S. companies who conduct business primarily in energy-related industries. This includes and is not limited to companies in alternative energy, coal, exploration, oil and gas services, pipelines, natural gas services and refineries.

Broad Asset Class Index: S&P 500 TR
Category Index: S&P 1500 Energy TR

Financial, SF
Financial portfolios seek capital appreciation by investing primarily in equity securities of U.S. or non-U.S. financial-services companies, including banks, brokerage firms, insurance companies, and consumer credit providers.

Broad Asset Class Index: S&P 500 TR
Category Index: DJ US Financial TR USD

Health, SH
Health portfolios focus on the medical and health-care industries. Most invest in a range of companies, buying everything from pharmaceutical and medical-device makers to HMOs, hospitals, and nursing homes. A few portfolios concentrate on just one industry segment, such as service providers or biotechnology firms.

Broad Asset Class Index: S&P 500 TR
Category Index: DJ US Health Care TR USD
U.S. Stock (continued)

**Industrials, ID**
Industrial portfolios seek capital appreciation by investing in equity securities of U.S. or non-U.S. companies that are engaged in services related to cyclical industries. This includes and is not limited to companies in aerospace and defense, automotive, chemicals, construction, environmental services, machinery, paper and transportation.

- Broad Asset Class Index: S&P 500 TR
- Category Index: S&P 1500 Industrials TR

**Natural Resources, SN**
Natural resources portfolios focus on commodity-based industries such as energy, chemicals, minerals, and forest products in the U.S. or outside of the U.S. Some portfolios invest across this spectrum to offer broad natural resources exposure. Others concentrate heavily or even exclusively in specific industries. Portfolios that concentrate primarily in energy-related industries are part of the equity energy category.

- Broad Asset Class Index: S&P 500 TR
- Category Index: S&P North American Natural Resources TR

**Real Estate, SR**
Real estate portfolios invest primarily in real-estate investment trusts (REITs) of various types. REITs are companies that develop and manage real-estate properties. There are several different types of REITs, including apartment, factory-outlet, health-care, hotel, industrial, mortgage, office, and shopping center REITs. Some portfolios in this category also invest in real-estate operating companies.

- Broad Asset Class Index: S&P 500 TR
- Category Index: DJ US Select REIT TR

**Technology, ST**
Technology portfolios buy high-tech businesses in the U.S. or outside of the U.S. Most concentrate on computer, semiconductor, software, networking, and Internet stocks. A few also buy medical-device and biotechnology stocks and some concentrate on a single technology industry.

- Broad Asset Class Index: S&P 500 TR
- Category Index: NYSE Arca Tech 100 TR
Utilities, SU
Utilities portfolios seek capital appreciation by investing primarily in equity securities of U.S. or non-U.S. public utilities including electric, gas, and telephone-service providers.

Broad Asset Class Index: S&P 500 TR  
Category Index: DJ Utilities Average TR USD

Miscellaneous Sector, MR
Miscellaneous sector portfolios invest in specific sectors that do not fit into any of Morningstar’s existing sector categories and for which not enough funds exist to merit the creation of a separate category.

Broad Asset Class Index: S&P 500 TR  
Category Index: Russell 3000 TR USD

Leveraged Net Long, LN
Leveraged net long portfolios seek income by establishing long and short positions in securities. The most common strategy for leveraged net long portfolios is to take long positions in securities that have been identified as attractive and short positions in securities that have been identified as overvalued. These portfolios typically hold long positions in securities with an aggregate value of up to 130% of its net assets. In addition, these portfolios will establish short positions in securities with a market value of up to 30% of its net assets. The net long exposure therefore remains 100%, but it is a leveraged exposure. This category is only used in Morningstar’s custom fund and separate account databases.

Broad Asset Class Index: S&P 500 TR  
Category Index: DJ US Total Full Cap TR USD
**Balanced**

**Convertibles, CV**
Convertible bond portfolios are designed to offer some of the capital-appreciation potential of stock portfolios while also supplying some of the safety and yield of bond portfolios. To do so, they focus on convertible bonds and convertible preferred stocks. Convertible bonds allow investors to convert the bonds into shares of stock, usually at a preset price. These securities thus act a bit like stocks and a bit like bonds.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: ML Converted Bonds All Qualities

**Conservative Allocation, CA**
Conservative-allocation portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds, and cash. These portfolios tend to hold smaller positions in stocks than moderate-allocation portfolios. These portfolios typically have 20% to 50% of assets in equities and 50% to 80% of assets in fixed income and cash.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: Morningstar Moderately Cons Target Risk

**Moderate Allocation, MA**
Moderate-allocation portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds, and cash. These portfolios tend to hold larger positions in stocks than conservative-allocation portfolios. These portfolios typically have 50% to 70% of assets in equities and the remainder in fixed income and cash.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: Morningstar Moderately Aggr Target Risk

**World Allocation, IH**
World-allocation portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds, and cash. While these portfolios do explore the whole world, most of them focus on the U.S., Canada, Japan, and the larger markets in Europe. It is rare for such portfolios to invest more than 10% of their assets in emerging markets. These portfolios typically have at least 10% of assets in bonds, less than 70% of assets in stocks, and at least 40% of assets in non-U.S. stocks or bonds.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: MSCI World NR USD
Balanced (continued)

**Target Date 2000-2010, TA**
Target date portfolios provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2000-2010) for retirement or another goal. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Over time, management adjusts the allocation among asset classes to more conservative mixes as the target date approaches.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: Morningstar Lifetime Moderate 2010

**Target Date 2011-2015, TD**
Target date portfolios provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2011-2015) for retirement or another goal. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Over time, management adjusts the allocation among asset classes to more conservative mixes as the target date approaches.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: Morningstar Lifetime Moderate 2015

**Target Date 2016-2020, TE**
Target date portfolios provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2016-2020) for retirement or another goal. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Over time, management adjusts the allocation among asset classes to more conservative mixes as the target date approaches.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: Morningstar Lifetime Moderate 2020

**Target Date 2021-2025, TG**
Target date portfolios provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2021-2025) for retirement or another goal. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Over time, management adjusts the allocation among asset classes to more conservative mixes as the target date approaches.

Category Index: Morningstar Lifetime Moderate 2040

**Target Date 2041-2045, TK**
Target date portfolios provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2041-2045) for retirement or another goal. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Over time, management adjusts the allocation among asset classes to more conservative mixes as the target date approaches.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: Morningstar Lifetime Moderate 2045
Balanced (continued)

**Target Date 2050+, TL**
Target date portfolios provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2050 and beyond) for retirement or another goal. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Over time, management adjusts the allocation among asset classes to more conservative mixes as the target date approaches.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: Morningstar Lifetime Moderate 2050

**Retirement Income, RI**
Retirement income portfolios provide a mix of stocks, bonds and cash for those investors already in or entering retirement. These portfolios tend to be managed to more of a conservative asset allocation strategy. These portfolios aim to provide investors with steady income throughout retirement.

Broad Asset Class Index: Morningstar Moderate Target Risk
Category Index: Morningstar Lifetime Moderate Income
International Stock

Foreign Large Value, FV
Foreign large-value portfolios invest mainly in big international stocks that are less expensive or growing more slowly than other large-cap stocks. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI EAFE Value NR USD

Foreign Large Blend, FB
Foreign large-blend portfolios invest in a variety of big international stocks. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). The blend style is assigned to portfolios where neither growth nor value characteristics predominate. These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI AC World Ex USA NR USD

Foreign Large Growth, FG
Foreign large-growth portfolios focus on high-priced growth stocks, mainly outside of the United States. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI EAFE Growth NR USD
International Stock (continued)

**Foreign Small/Mid Value, FA**
Foreign small-/mid-value portfolios invest in international stocks that are smaller and less expensive than other stocks. These portfolios primarily invest in stocks that fall in the bottom 30% of each economically integrated market (such as Europe or Asia ex-Japan). Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI World ex USA NR USD

**Foreign Small/Mid Growth, FR**
Foreign small-/mid-growth portfolios invest in international stocks that are smaller, growing faster, and higher-priced than other stocks. These portfolios primarily invest in stocks that fall in the bottom 30% of each economically integrated market (such as Europe or Asia ex-Japan). Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI World ex USA NR USD

**World Stock, WS**
World-stock portfolios have few geographical limitations. It is common for these portfolios to invest the majority of their assets in the U.S., Europe, and Japan, with the remainder divided among the globe’s smaller markets. These portfolios typically have 20%-60% of assets in U.S. stocks.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI World NR USD

**Diversified Emerging Mkts, EM**
Diversified emerging-markets portfolios tend to divide their assets among 20 or more nations, although they tend to focus on the emerging markets of Asia and Latin America rather than on those of the Middle East, Africa, or Europe. These portfolios invest at least 70% of total assets in equities and invest at least 50% of stock assets in emerging markets.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI EM NR USD
International Stock (continued)

**Latin America Stock, LS**
Latin America stock portfolios invest almost exclusively in stocks from Latin America. Most of these portfolios strongly favor the area's large markets, specifically Brazil, Mexico, and Argentina. Smaller markets such as Peru or Colombia aren't generally as well-represented in these portfolios. These portfolios invest at least 70% of total assets in equities and invest at least 75% of stock assets in Latin America.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI EM Latin America NR USD

**Europe Stock, ES**
Europe-stock portfolios invest at least 70% of total assets in equities and invest at least 75% of stock assets in Europe. Most of these portfolios emphasize the region's larger and more developed markets, including Britain, the Netherlands, Germany, France, and Switzerland. Many also invest in the region's smaller markets, including the emerging markets of eastern Europe.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI Europe NR USD

**Japan Stock, JS**
Japan stock portfolios emphasize companies based in Japan. The Japanese stock market is one of the largest in the world, so these portfolios' holdings vary significantly. Some portfolios concentrate on Japan's larger companies, while others concentrate on the nation's smaller firms. These portfolios invest at least 70% of total assets in equities and invest at least 75% of stock assets in Japan.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI Japan NR USD

**Pacific/Asia ex-Japan Stk, PJ**
Pacific/Asia ex-Japan stock portfolios cover a wide geographic range. Most of these portfolios focus on export-oriented nations such as Hong Kong, Singapore, Taiwan, and Korea. These portfolios invest at least 70% of total assets in equities and invest at least 75% of stock assets in Pacific countries, with less than 10% in Japan.

Broad Asset Class Index: MSCI EAFE NR USD
Category Index: MSCI AC Far East Ex Japan NR USD
International Stock (continued)

**Diversified Pacific/Asia, DP**
Diversified Pacific/Asia stock portfolios have a wider investment range than other Asia-oriented portfolios. These portfolios can invest throughout the Pacific Rim, including Australia and New Zealand. As a result, country weightings for these portfolios vary tremendously, though most retain some exposure to Japan and Hong Kong. These portfolios invest at least 70% of total assets in equities and invest at least 75% of stock assets in Pacific countries, including at least 10% in Japan.

- Broad Asset Class Index: MSCI EAFE NR USD
- Category Index: MSCI Pacific NR USD

**Global Real Estate, GR**
Global real estate portfolios invest primarily in non-US real estate securities, but may also invest in U.S. real estate securities. Securities that these portfolios purchase include: debt & equity securities, convertible securities, and securities issued by Real Estate Investment Trusts (REITs) and REIT like entities. Portfolios in this category also invest in real-estate operating companies.

- Category Index: MSCI World/Real Estate NR USD
Alternative

**Bear Market, BM**
Bear-market portfolios invest in short positions and derivatives in order to profit from stocks that drop in price. Because these portfolios often have extensive holdings in shorts or puts, their returns generally move in the opposite direction of the benchmark index.

Broad Asset Class Index: ML USD LIBOR 3 Mon CM
Category Index: S&P 500 TR

**Currency, CR**
Currency portfolios invest in US and foreign currencies through the use of short term money market instruments; derivative instruments, including and not limited to, forward currency contracts, index swaps and options; and cash deposits.

Broad Asset Class Index: ML USD LIBOR 3 Mon CM
Category Index: ML US Treasury Bill 3 Mon

**Long-Short, LO**
Long-short portfolios hold sizable stakes in both long and short positions. Some funds that fall into this category are market neutral – dividing their exposure equally between long and short positions in an attempt to earn a modest return that is not tied to the market's fortunes. Other portfolios that are not market neutral will shift their exposure to long and short positions depending upon their macro outlook or the opportunities they uncover through bottom-up research.

Broad Asset Class Index: ML USD LIBOR 3 Mon CM
Category Index: S&P 500 TR

**Market Neutral, NE**
Market neutral portfolios seek income while maintaining low correlation to fluctuations in market conditions. Market neutral portfolios typically hold 50% of net assets in long positions and 50% of net assets in short positions in order to deliver positive returns regardless of the direction of the market. This category is only used in Morningstar’s custom fund and separate account databases.

Category Index: DJ UBS Precious Metals TR USD
Taxable Bond

**Long Government, GL**
Long-government portfolios have at least 90% of their bond holdings invested in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. They are not risk free, though. Because these portfolios have durations of more than six years (or, if duration is unavailable, average effective maturities greater than 10 years), they are more sensitive to interest rates, and thus riskier, than portfolios that have shorter durations.

Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: BarCap US Government Long TR USD

**Intermediate Government, GI**
Intermediate-government portfolios have at least 90% of their bond holdings in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. These portfolios have durations between 3.5 and six years (or, if duration is unavailable, average effective maturities between four and 10 years). Consequently, the group’s performance—and its level of volatility—tends to fall between that of the short government and long government bond categories.

Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: BarCap US Government TR USD

**Short Government, GS**
Short-government portfolios have at least 90% of their bond holdings in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. These portfolios have durations between one and 3.5 years (or, if duration is unavailable, average effective maturities between one and four years), so they have relatively less sensitivity to interest rates, and thus low risk potential.

Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: BarCap Government 1-5 Yr TR USD

**Inflation-Protected Bond, IP**
Inflation-protected bond portfolios invest primarily in debt securities that adjust their principal values in line with the rate of inflation. These bonds can be issued by any organization, but the U.S. Treasury is currently the largest issuer for these types of securities.

Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: BarCap US Treasury US TIPS TR USD
Long-Term Bond, CL
Long-term bond portfolios invest primarily in corporate and other investment-grade U.S. fixed-income issues and have durations of more than six years (or, if duration is unavailable, average effective maturities greater than 10 years). Due to their long durations, these portfolios are exposed to greater interest rate risk.
Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: BarCap US Govt/Credit Long TR USD

Intermediate-Term Bond, CI
Intermediate-term bond portfolios invest primarily in corporate and other investment-grade U.S. fixed-income issues and have durations of 3.5 to six years (or, if duration is unavailable, average effective maturities of four to 10 years). These portfolios are less sensitive to interest rates, and therefore less volatile, than portfolios that have longer durations.
Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: BarCap US Govt/Credit 5-10 Yr TR USD

Short-Term Bond, CS
Short-term bond portfolios invest primarily in corporate and other investment-grade U.S. fixed-income issues and have durations of one to 3.5 years (or, if duration is unavailable, average effective maturities of one to four years). These portfolios are attractive to fairly conservative investors, because they are less sensitive to interest rates than portfolios with longer durations.
Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: BarCap Govt/Credit 1-5 Yr TR USD

Ultrashort Bond, UB
Ultrashort bond portfolios invest primarily in investment-grade U.S. fixed-income issues and have durations of less than one year (or, if duration is unavailable, average effective maturities of less than one year). This category can include corporate or government ultrashort bond portfolios, but it excludes international, convertible, multisector, and high yield bond portfolios. Due to their focus on bonds with very short durations, these portfolios offer minimal interest-rate sensitivity and therefore low risk and total return potential.
Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: USTREAS CD Sec Mkt 6 Mon
Bank Loan, BL
Bank-loan portfolios primarily invest in floating-rate bank loans instead of bonds. In exchange for their credit risk, these loans offer high interest payments that typically float above a common short-term benchmark such as the London interbank offered rate, or LIBOR.

Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: BarCap Govt/Credit 1-5 Yr TR USD

Stable Value, VL
Stable-value portfolios seek to provide income while preventing price fluctuations. The most common stable-value portfolios invest in a diversified portfolio of bonds and enter into wrapper agreements with financial companies to guarantee against fluctuations in their share prices. These wrapper agreements typically provide price stability on a day-to-day basis, thereby insulating each portfolio’s net asset value from interest-rate volatility. Therefore, the duration for each of these funds is essentially zero. This category is only used in Morningstar’s custom fund and separate account databases.

Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: USTREAS T-Bill Cnst Mat Rate 3 Yr

High Yield Bond, HY
High-yield bond portfolios concentrate on lower-quality bonds, which are riskier than those of higher-quality companies. These portfolios generally offer higher yields than other types of portfolios, but they are also more vulnerable to economic and credit risk. These portfolios primarily invest in U.S. high-income debt securities where at least 65% or more of bond assets are not rated or are rated by a major agency such as Standard & Poor’s or Moody’s at the level of BB (considered speculative for taxable bonds) and below.

Broad Asset Class Index: BarCap US Agg Bond TR USD
Category Index: ML US HY Master II

Multisector Bond, MU
Multisector bond portfolios seek income by diversifying their assets among several fixed-income sectors, usually U.S. government obligations, U.S. corporate bonds, foreign bonds, and high-yield U.S. debt securities. These portfolios typically hold 35% to 65% of bond assets in securities that are not rated or are rated by a major agency such as Standard & Poor’s or Moody’s at the level of BB (considered speculative for taxable bonds) and below.
