VMware vCloud Suite
Your IT Infrastructure upgraded to a Software-Defined Data Center

vCenter Operations Management

vCenter Operations Management

Performance and capacity optimization – analytics, dashboards and alerting

• Increase quality of service, operational efficiency and outcome compliance for your dynamic hybrid cloud infrastructure and business-critical applications with VMware vCenter Operations Management. 
• Powerful analytics provide a comprehensive view of your virtual infrastructure.
• 24/7/365 support from VMware experts.

VMware vCenter Operations Management

• Accelerate the adoption of virtualization and cloud computing for business-critical applications. 
• Reduce IT costs and complexity with simplified infrastructure management. 
• Automate and optimize the management of VMware vCenter environments.
• VMware vCenter Operations Management is tightly integrated with vCloud Director, enabling you to easily create and manage virtualized environments.

vFabric Application Director

Automated configuration and deployment of multi-tier cloud applications

• vFabric Application Director is an application provisioning solution that reduces application deployment time by up to 70 percent for both virtual and physical environments. 
• vFabric Application Director streamlines the deployment of applications across your environment with a simple, intuitive user interface.

VMware vFabric Application Director

• Accelerate application development and deployment with automatic application generation. 
• Automate the creation of complex, multi-tier applications across physical and virtual environments.
• Scalable architecture supports up to 10,000 users.

Cloud Automation Center

Provisioning and management of IT services in vSphere environments

• Rapidly deploy and provision cloud services across private and public clouds, physical infrastructures, and mobile devices with VMware vCloud Automation Center. 
• vCloud Automation Center is an automated service delivery platform that enables you to quickly and easily provision and manage IT services.

VMware vCloud Automation Center

• Enables automated service delivery across physical and virtual environments. 
• Integrated with VMware vCenter Server and other VMware products. 
• Supports disaster recovery and business continuity initiatives.

VCloud Connector

Private and public cloud extensibility

• vCloud Connector 2.0 delivers a comprehensive service-oriented architecture for your hybrid cloud environment. 
• Enables you to extend the logical boundaries of your datacenter and manage a single catalog across the entire cloud environment.

VMware VCloud Connector

• Single-pane-of-Glass UI for viewing, registering and operating on your workloads. 
• Reusable workload transfer with network host interfaces. 
• Lateral connectivity from VCloud Connector to VMware vCenter Server.

VCloud Director

Virtualized datacenters with multi-tenancy

• vCloud Director helps you deploy, manage, and secure virtual datacenters that are ready for consumption in a matter of minutes. 
• Provides a single-pane-of-glass UI for viewing, registering and operating on your workloads.

VMware vCloud Director

• Enables centralized management and control of virtual datacenters. 
• Isolated multi-tenant organizations. 
• Supports multi-cloud, multi-tenant datacenter environments.

VCloud Networking and Security

Advanced continuous availability, firewall and network security

• vCloud Networking and Security is the leading software-defined networking and security solution that enables continuous application delivery and optimal security for your hybrid cloud environment. 
• Provides continuous availability, data protection, and seamless application delivery across physical and virtual environments.

VMware vCloud Networking and Security

• Provides continuous availability and data protection across physical and virtual environments. 
• Supports virtual and physical environments.
• Supports multi-tenant environments.
