Partners for Endoscopy Ltd.

More than half a decade has passed since this organisation was created by seven ambitious endoscopy professionals, determined that they could make their new ideas and attitudes improve the field beyond compare. With a staff of more than 20 now accounting for what are several centuries of combined experience, Partners for Endoscopy are very much established at the forefront of the field and have built a fine reputation in the NHS and private facilities across the UK and far beyond.

We have been able to grow because we research properly, because we produce what we need and, fundamentally, because we listen to you, our customers. Our rapport with you has allowed us to develop a training facility that is unique in this industry and will be used to great effect to provide easy instruction on your TRACE system. This means we can have the entire system operational and your staff using it effectively in just a couple of days.
Manual Cleaning

EP Range
The latest guidance calls for immediate channel flush and insertion tube wipe using enzymatics. The EP range covers all requirements - economy, convenience and safety any unit guarantees correct dilution, low volume waste and economical to use.

EP1 ENDO-PACKS
All-in-one pre-clean kit. Used in the decontamination area to prep flexible endoscopes.

PRODUCT CODES
22008 (EP1) Pack of 100

EP2 ENDO-PACKS
The first step in reprocessing a flexible endoscope is to wipe down the insertion tube and suction up enzymatic detergent/water through the working channels. First Step bedside kits put it all together in one convenient kit. Ideal for procedures away from the Endoscopy unit.

PRODUCT CODES
22009 (EP2) Pack of 120

EP4
Perfect for the procedure room. Pre diluted, fits the Oasis tray and is a genuine enzymatic – as recommended by JAG.

PRODUCT CODES
22014 Pack of 70

ENDOPACKS
The First Step Endopacks contain a dilute enzymatic solution which can be used by the patient’s bedside to administer immediate enzymatic cleaning onto a used endoscope – which makes it an ideal replacement for buckets and bowls.

PRODUCT CODES
22008 (EP1) Pack of 100
22009 (EP2) Pack of 120
22014 (EP4) Pack of 70
22016 (EP4 holder) Sold individually

EPW 500ML FIRST STEP ADD WATER BEDSIDE KIT
Our new First Step 500ml Flexible Endoscope Bedside Pre-Clean Kit is sent to you with concentrated Simple2 Enzymatic Detergent. You simply dilute the concentrate by adding tap water into the stand up pouch. This can even be done in advance as a unique zip lock retains the mix ready for use. There is an easy-to-read fill line on a clear strip on the back of the pouch. This kit is economical to use, cost-effective and convenient to store. It’s also environmentally friendly, with a lower carbon footprint than alternative bedside kits, due to less packaging (as audited under our ISO14001 environmental quality standard).

PRODUCT CODES
22017 Pack of 120
LONG GLOVES
We’ve sourced a glove that is supple enough to allow unhindered cleaning of the endoscope, yet long enough to protect forearms from the potentially hazardous cleaning solution on a dirty endoscope. To our knowledge, these are the only gloves on the market that meet these requirements.

PRODUCT CODES
Vault

COVERSLEEVES
The new guidance produced from the endoscopy working group on behalf of the BSG, now states that forearms must be covered during manual cleaning to help reduce the transmission of infections. Our plastic coversleeves provide a cost-effective, practical and comfortable way of covering the exposed area between gloves and short sleeves on blues or uniforms. These are fully disposable and can be thrown away after each case. They come in packs of 1000 pairs and a wall fitting dispenser can also be purchased for easy storage and access.

PRODUCT CODES
16200 Pack of 1000 pairs
16201 Dispenser

ZYMEX
All current guidelines promote the use of enzymatic detergent in cleaning by the patient bedside – during the manual clean and in an AER. Our enzymatic detergent can be used in all stages of the endoscope cleaning process and can even be used in ultrasonic baths.

In addition, it is INEXPENSIVE when compared to other manufacturers and does not require additional heat to do the job. Available in one and five litre (with dispenser pump) bottle sizes. In addition, an automatic dosing pump will be supplied free of charge to bigger users.

PRODUCT CODES
40001 Box of 4 x 1 litre
40002 Box of 4 x 5 litres

PRAWN CRACKER SPONGES
Lint free PVA sponge.
Perfect for cleaning flexible endoscopes.
• Disposable, one-time use
• Save storage space!
• Tear resistant
• Will not contribute to A.E.R.
• “Solenoid Screen Buildup”
• Highly absorbent
• Soft and effective
• Inexpensive!

PRODUCT CODES
10003 Pack of 100

APA CLEANING SINKS - DESIGNED FOR JAG AUDITS
Normal sinks are too deep and the wrong shape for cleaning flexible endoscopes. Partners supply custom designed sinks with automatic measured detergent dosing, leak testing and purge pumps. Height adjusting also available to solve back strain issues.

ENDOSINK
The Endosink meets JAG requirements in less than half the footprint. Rise and fall controlled process.

CLEANING ROOM TOO SMALL?
BUDGETS SQUEEZED TOO TIGHT TO AFFORD NEW SINKS?
SINK INSERTS
A low cost way to adapt your sinks to ease back pain caused by leaning over deep bowls.

Contact PFE for a bespoke measuring service and quotation on 01782 594164.
FACE MASKS
Partners provide a large variety of masks for use in the cleanroom and during procedures. The product range includes fluid-resistant moulded face masks, ear-loop masks and half/full-face shields, all of which are competitively priced.

WATERPROOF GOWNS
Different units sometimes have different needs. We have supplied a breathable, splash resistant range of gowns for the reprocessing room for many years, but some customers required a totally waterproof range. We now supply both!

PRODUCT CODES
<table>
<thead>
<tr>
<th>Code</th>

</tbody>
</table>

SPASH-PROOF GOWNS
During procedures and manual cleaning there is a high risk of being splashed with body fluids. Guidelines recommend that staff should cover all of the body.

To protect yourself and your clothing our gowns are full-length wrap-around with full-length covering for arms, are soft and breathable whilst integrating a water resistant coating. They are also fully disposable, therefore preventing the passing on of potentially infective fluids. Excellent for manual cleaning and procedures such as ERCP, where they can be worn comfortably under lead aprons.

WATERPROOF GOWNS

BIOPSY CAPS
BSG guidelines now state that if a biopsy cap is penetrated during a procedure then it must be thrown away. This obviously leads to an increase in demand against your departments budget.

To help with this, Partners has produced a low-cost biopsy cap which can fit Olympus and Fujinon 5 series scopes. This enables you to comply with guidelines without breaking the departmental budget. The improved version solves any leaking issues. Also available individually wrapped and sterile.

Manual Cleaning

Endo SmartCap
“Very pleased with the product”
Endoscopy Sister, St Hugh’s Hospital
Manual Cleaning

From stenting duodenoscopes to superfine hysteroscope channels, we have a brush to suit your scopes and your budget, call for a quote and we guarantee to beat your current supplier!

CLEANING BRUSHES

Brushes used during manual cleaning must now be fully disposable. Our brushes are double-ended with a small brush for passing through the channel (internal diameter size 2.2mm – 5.3mm) with a large port brush on the opposite end for cleaning within the biopsy port and valve housing.

SUPERFINE BRUSHES

Universal precautions state that all patients should be treated the same. Then why do some people re-use cleaning brushes? This could be because until now there has been no available disposable brushes that can be used on very narrow channelled instruments such as ureterscopes, intubating bronchoscopes and hysteroscopes. Our Superfine brushes fit a channel size of less than 2mm and are disposable – enabling you to standardise across your department regardless of the size of scope.

Partners for Endoscopy, proud sponsors of
Automatic Endoscope Reprocessors

PT1/PT2

Built on the strength of the 20 year reputation of the range, the new generation of PT1/PT2 machines continues to provide users with a reliable scope reprocessing system in accordance with current guidance and legislation.

Utilising an ultrasonic cleaning action and a unique valve washing system, the PT1/PT2 is the only machine to validate the reprocessing of a scope and also the air, water and suction buttons too. The PT1/PT2 provides flexibility of design with single chamber and slimline machines to accommodate all reprocessing requirements. From the busiest endoscopy suites to the smaller satellite OPD areas (e.g. ENT) the PT1/PT2 can be set up to your bespoke requirement with a choice of:

- Chemical – all multi-shot/single use options available.
- Water treatment – RO, standard filtration or alternative bacteria free rinse water systems.

PT3 AER

Three independent trays produce a sterile endoscope every seven minutes! Low running costs and high reliability make this the answer for busy endoscopy units.

This pass-through AER is the only model in the world to have a triplex design. No components are shared for any of the three trays, ensuring your lists are not disrupted. Uses the latest RFID traceability package for seamless processing.
Automatic Endoscope Reprocessors

Soluscope Series 3 and 4

Designed around the European Norm 15883, the Soluscope range process one endoscope in a fraction of the time of conventional AER’s. With a small footprint, low-cost per cycle and easy to use, one of the Soluscope Series is a perfect addition, especially for satellite clinics.

Automatic Endoscope Reprocessors

ENT SOLUSCOPE

Designed specially to reprocess nasendoscopes in line with guidance and legislation. Compact design to fit in the smallest of clinic settings. Ensures safety for all. The patient will receive a safely disinfected scope every time without the expense of sheaths or risk of unproven disinfectant wipes. Complete with full traceability package. Fully enclosed system and rapid 12 minute cycle ensuring clinic activity is maintained.

REVERSE OSMOSIS (RO)

Reverse osmosis is the HTM recommended method of supplying bacteria-free water to your washer/disinfector.

As well as utilising RO membranes, our system also uses UV and a specially adapted timed self-disinfect cycle, which can be used in conjunction with our biofilm remover to provide peace of mind.

Due to its unique dispense system, the Partners RO system can supply a large 80 litre out-flow capacity which means several machines can be connected to one unit. The unit itself is stand-alone with a small footprint of 800mm x 800mm.

Endo SmartCap
“Brilliant idea”.
Endoscopy Sister,
Southend Hospital
## BioFilm Remover

Provides a highly effective alternative to chlorine based agents for self-disinfection of RO, filters and AER’s. Regular use will ensure that final water within your system is maintained in accordance with HTM 01-06 standards and will also improve flow and membrane life.

Situates in an automated generator, timed self-disinfects can be scheduled regularly and at convenient times to the department ensuring all water systems, filters and scope reprocessors are not harbouring any microbial growth.

**Product Codes**

- 40005: Box of 4 x 5 litres

## TEST Soil

Allows the department to comply with test schedules of HTM with this validated easily applied test soil kit. Simply mix with water and brush on to the chamber of your AER, then complete a normal operational cycle.

Provides an instant, visual validation of the cleaning efficiency of your AER. The soil can also be used in surrogate devices to test channel cleaning.

“Partners for Endoscopy, both representatives and engineers, are very helpful, easy to contact and the engineers are very quick in their response.”

Sarah O’Brien, Endoscopy, Princess of Wales Hospital
**WHAT IS TRIOSAFE?**

TrioSafe is a revolutionary sporicidal, antibacterial, bactericidal, fungicidal and virucidal sterilant. It is non-toxic and alcohol free. TrioSafe contains HOCI (Hypochlorous Acid), the active ingredient produced by the body’s immune system for protection against infection.

Due to its incredible killing power, HOCI has been used in surgical units for over 20 years. Until now it has only been available using an expensive and unreliable on-site production process. Partners For Endoscopy have spent six years developing a low-cost reliable on-site generator.

HOCI is also widely used within the food services, agricultural, veterinary, dental, water and facilities management sectors where the highest, uncompromised, health and hygiene standards must be observed at all times.

**WHAT MICRO-ORGANISMS DOES IT KILL?**

HOCI is a highly active, antibacterial, antiviral and anti-fungal sterilising agent, achieving a >10^7 log reduction within two minutes exposure in the absence of organic material and within five minutes in the presence of 10% serum solutions. (Journal of Hospital Infection Babb et al 1999).

Unlike any other steriliser, TrioSafe is non-toxic, with no exposure limits and no disposal hazards. TrioSafe contains no salt therefore does not have the same corrosive actions as other types of HOCI generated electrolytically.

**HOW DOES IT WORK?**

According to the effect of Super-Oxidised water on Escherichia coli, the action of HOCI was the "total destruction of chromosomal and plasmid DNA, RNA and proteins of E. coli within five minutes of exposure". Atomic force microscopy imaging revealed swelling and rupture of cells with release of cytoplasm. The paper proposed the bio-cidal properties of HOCI are due to its effect upon constituents of the bacterial cell including proteins and nucleic acids. (Journal of Hospital Infection, Zinkevich et al (2000)46: 153-156).

**HOW DOES IT WORK?**

The revolutionary sporicidal, antibacterial, bactericidal, fungicidal and virucidal sterilant. It is non-toxic and alcohol free. Now available in a spray bottle.

WATER SAMPLING KIT

The Partners’ Water Sampling System kit provides a convenient and more accurate method to collect water samples from your AER with minimal user intervention. It eliminates many false positives that can occur from environmental contamination on collection of the sample. The sampling kit also saves precious time as it’s housed within the chamber during a process and will collect the sample without the need for the user having to wait or interrupt the cycle. Simply plug in, walk away and the sample will be automatically collected at the end of the cycle.

SERVICING AND TESTING

Providing a fast and efficient service to the endoscopy sector.

- Bespoke Service Contracts
- Combative Bacterial Approach
- EN ISO 15883-4 Validations
- HTM 2030 Validations
- Full Micro Validation Tests
- Biofilm Remover
- Large Inventory Stock Carried
- Regionally Based Engineers
- Fast Emergency Response Times
- Clinical Nurse Advisor

Our emergency response times are measured monthly to ensure we deliver a personalised service. Currently 99% of callouts are resolved in under 3 hours.
Automatic Endoscope Reprocessors

**HTM2030 TEST KITS**

Looking to take your HTM testing in house to save money? PFE can help.

Premade test kits provide you with all you need for a member of staff to carry out complete annual and quarterly revalidation.

Along with advice notes, the kit will make it easy for you. We will send the kit to you in cool bags and arrange for a courier to pick it up the following day to return it to the lab.

You just have to take the samples and keep them cool.

**ANNUAL VALIDATION KIT**

**Contents:**
- A water sampling kit
- Preloaded testing devices containing bacteria
- One set of quarterly items included (see below)

**Laboratory tests include:**
- Chemical analysis of the final rinse water
- Total viable counts on final rinse water
- Environmental Mycobacteria
- Endotoxins
- Qualification tests using Pseudomonas, E.coli and Staphylococcus species

Transportation back to Laboratory

**QUARTERLY HTM2030 TEST**

**Contents:**
- Water sampling bottles
- Soil test kit
- Channel Patency test kit

**Laboratory tests include:**
- Total Viable Counts on final rinse water
- Soil testing using appropriate test soil as described in HTM 2030
- Validation and verification and surrogate device

*Please note you will need one of these every three months

**WEEKLY TEST**

**Contents:**
- Water sampling bottles
- (Lab tests include: TVC, hardness, conductivity)

**OASIS ENDOSCOPE TRAY**

Made from recycled print paper, the Oasis tray replaces both re-usable (and often contaminated) trays and expensive, fiddly liners. It has a solid lid to meet JAG guidelines, a well to hold your pre clean enzymatic detergent without spillages. As it is made of paper, it’s also great for the environment. How good is that?! And they have silver nitrate mixed in with the pulp to keep them bacteria static.

The lid reverses to clearly identify the status of the endoscope contained within.

**OASIS CART**

The Oasis tray will fit most ‘scope carrying carts and most endoscopes but as you can imagine, Partners can supply one at a better price than the competition!

To hold up to seven Oasis trays as shown

**Product codes**

| PRODUCT CODES | 10900 | Box of 60 |

Partners are also able to supply a clinical waste bin for safe dispose of the trays – please contact your Sales Partner or the office for further details 01782 594164
Scope Storage/Transport

ENDO BOTTOM COVERS

The Endo Bottom Covers protect the distal tip of your 'scope during transportation or storage. Simply slide on over distal tip. Fully disposable.

**PRODUCT CODES**

Our Vinyl Endo Bumpers provide padded protection for the fragile tips of your endoscopes.

**PRODUCT CODES**

EB-03 (39.4cm x 21.6cm x 3.8cm)
EB-06 (69.8cm x 21.6cm x 3.8cm)

How would you rate the courtesy of our staff? “Patient, helpful”. Wendy Kentish, Endoscopy Unit, Royal London Hospital

• Accommodates all of today’s endoscopes
• Easily cleaned
• Can be mounted on a wall or cabinet
• Made of strong, durable plastic
• Relieves bundle strain
• Holds three or six 'scopes
• Mounting hardware and instructions included

• Made of durable vinyl
• Easy to clean
• Wall mounted with durable Velcro
• Waterproof
• Small and compact, two sizes available
• Can be easily moved
Scope Storage/Transport

TROLLEYS

Partners carry a variety of trolleys for GI endoscopy and ERCP rooms. Unique, click-on monitor stands make easier movement from room to room. ERCP carts feature tambour locking drawers for drugs etc.

MASS

Provides a full range of storage solutions, robust and flexible in design – from ‘scope cupboards to ERCP mobile carts. Other applications include cardiology/angiography. Units can be made bespoke to requirement with design support services available.

ENDOSCOPY ACCESSORY HOLDER
In keeping with the provision of traceability records for all items used during an endoscopic procedure, it is essential to ensure that accessories to the endoscope — in particular the valves — are kept with the correct instrument. Traditional ‘Persil bags’ are a great way of achieving this but with one major drawback; being made of material, they retain moisture following a processing cycle which provides one of the essential conditions for the growth of micro-organisms.

Our answer? The Endoscope Accessory Holder affectionately known as the ‘Tea Strainer’ (for obvious reasons) provides a surgical stainless steel version of the ‘Persil bag’ capable of holding two sets of valves. These can be labeled to correspond with the endoscope that the buttons belong to or physically tagged to the ‘scope via our ‘EndoCap Leash’ product. Numbered tags make ‘scope and accessory pairing even easier.

TAGS
We were asked to provide a chemical proof, easy to read and low cost way to quickly identify each endoscope in the unit. Not much more to say, numbered 1 to 50, these tags meet all the requirements.

Accessories

EXAM PANTS
During a JAG audit, our customers were asked how they were maintaining sigmoidoscopy and colonoscopies patients’ dignity. These fetching little numbers achieve that at minimal cost.
These one use disposable exam shorts feature a rear cut-out covered by a flip-up flap making them ideal for colonoscopy and endoscopy procedures while allowing the patient to maintain his/her modesty.
- Made of 3 ply triplex polyspun material laminated together.
- Flap is secured by tape in the closed position.

LEAK TESTER
Our handheld Leak Tester is suitable for all makes of flexible endoscope. A high degree of endoscope repair bills can be attributed to fluid/chemical ingress into the instrument through splits in the outer protective layer. This can be easily avoided with leak testing prior to every reprocessing cycle.

TOWER DRAPE
Like most products from Partners, this one comes from an idea by an endoscopy sister.
She realised that when disconnecting the light guide on a dirty ‘scope, she was soiling the video processors switches and surfaces. Then when she reconnected the ‘scope – bingo! – instant contamination.
Our solution for her, and you: the Tower Drape. Perforated slots to allow the light guide and diathermy lead to be connected but fully cover the whole tower.

SINGLE USE RAT TOOTH GRASPING FORCEP

The single use grasping forceps is indicated for use in the gastrointestinal tract via endoscope to grasp tissue, stone or other foreign objects.

It uses a linkage structure that allows superior flexibility and actuation.

AWS BUTTONS

Endoscope valves are vital, sophisticated devices that require regular meticulous cleaning procedures. There are over 30 steps to proper manual cleaning and reprocessing of Biopsy, Air/Water and Suction Valves, which can make the cleaning process difficult, if not impossible.

DEFENDO® Sterile Single Use Air/Water, Suction and Biopsy Valves:
• Eliminate manual cleaning and reprocessing of reusable valves
• Help create consistent practices
• Reduce the potential for errors
• Available for Olympus endoscopes
