WARNING: Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual. For assistance or additional information consult qualified installer, service agency or the gas supplier.

FOR YOUR SAFETY

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

FOR YOUR SAFETY

WHAT TO DO IF YOU SMELL GAS:
1. Do not try to light any appliance.
2. Do not touch any electrical switch; Do not use any phone in your building.
3. Immediately call your gas supplier from a neighbor’s phone and follow the gas supplier’s instructions.
4. If you cannot reach your gas supplier, call the fire department.

The Flue Damper must be in the full open position when burning the gas logs.

This fireplace is to be burned only with the gas log set supplied with the fireplace. Burning other items could cause a fire hazard or injury.

For best results, Natural Gas pressure should be 7” to 12” W.C. and 11” W.C. for Propane Gas.

To simulate real wood burning, the gas burner is designed to burn a yellow flame. It is normal for the logs to soot-up. The soot can be easily removed with a vacuum cleaner or soft brush.

Check the label on the firebox to assure the proper gas type. Never use anything but the correct gas type for your fireplace.

This appliance complies with National Safety and is tested and listed by A.G.A. to ANSI Z21.50 - 1996 as Vented Decorative Gas appliance. Installation must conform to local codes. In the absence of local codes, installation must conform with the current National Fuel Gas Code, ANSI Z223.1.

Massachusetts State Code requires damper to be welded open or removed.

The design of this FIREPLACE ACCESSORY has been tested and is listed with CSA INTERNATIONAL in accordance with THE AMERICAN NATIONAL STANDARDS INSTITUTE - ANSI Z21.50, CSA Test Report No. 188842-1049553.

This manual serves only as a basic guideline for installation and use of this firebox and gas piping. The complete installation must be in accordance with local codes and ordinances, or, in the absence of local codes, with the American National Standards Institute National Fuel Gas Code Z223.1 latest edition.

GENERAL INFORMATION

MODEL SF3624-TV IS A TOP-VENTED DECORATIVE GAS APPLIANCE. IT IS DESIGNED TO BURN BY DRAWING COMBUSTION AIR FROM THE OUTSIDE AIR KIT THAT ATTACHES TO THE LEFT SIDE OF THE FIREPLACE.

THE EXHAUST FLUE GASES ARE TO BE VENTED THROUGH THE TOP-VENT USING 8" B-TYPE GAS VENT PIPE. ALL-FUEL CLASS A CHIMNEY PIPE MAY ALSO BE USED.

THE CONTROL SYSTEM IS A MILLIVOLT TYPE THAT INCLUDES A ON-OFF SHUT-OFF VALVE, A GAS CONTROL VALVE, A STANDING PILOT LIGHT ASSEMBLY, PIEZO IGNITOR AND ON-OFF ROCKER SWITCH.

WARNING: THIS UNIT IS NOT FOR USE WITH SOLID FUEL.

NOTE: INSTALLATION AND REPAIR SHOULD BE DONE BY A QUALIFIED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND AT LEAST ANNUALLY BY A PROFESSIONAL SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO EXCESSIVE LINT FROM CARPETING, BEDDING MATERIAL, ETC. IT IS IMPERATIVE THAT THE UNITS CONTROL COMPARTMENT, BURNERS, AND CIRCULATING AIR PASSAGE-WAYS BE KEPT CLEAN TO PROVIDE ADEQUATE COMBUSTION AND VENTILATION AIR.

CLEARANCES REQUIRED

MINIMUM CLEARANCES FOR THE FIREBOX ARE:

1/2" ON THE SIDES AND BACK AND 0 AT THE BOTTOM. TOP CLEARANCE IS 3" WHICH IS THE HEIGHT OF TOP STANDOFFS, SEE FIGURE 7.1 FOR FRAMING DIMENSIONS:

NOTE: PROVIDE ADEQUATE CLEARANCES AROUND AIR OPENINGS INTO THE COMBUSTION CHAMBER.
GAS PIPING AND GAS PRESSURE REQUIREMENTS

All gas piping must be installed to comply with local codes, or, in the absence of local codes, with the latest edition of the National Fuel Gas Code ANSI Z223.1.

Unions in gas lines shall be of ground joint type. Compounds used on threaded joints of gas piping must be resistant to the action of liquefied petroleum gas. Gas piping must be of sufficient size to provide a minimum natural gas pressure at the appliance of 7" water column or 11" for L.P. gases for the purpose of input adjustment. The maximum inlet gas pressure to the unit must not exceed 10" for natural gas, and 13" for LP gases. If this unit is to be supplied with LP gas (bottled propane) the tank or bottle supplying the gas must have a regulator that reduces the gas pressure to between 11 and 13 inches water column. The control will not operate with gas line pressure directly from the tank and may leak gas due to this excessive pressure.

**DANGER:** OPERATION OF THIS UNIT ON LP GAS WITHOUT AN APPROVED REGULATOR AT THE SUPPLY CONTAINER WILL LEAD TO GAS LEAKS AT THE CONTROL WITH POSSIBLE FIRE OR EXPLOSION.

Include a manual shut-off valve and union in the line so the control or heater may be disconnected for servicing. Include a drip leg and a plugged 1/8" N.P.T. tapping into the line also. The tapping must be accessible for the test gauge connection immediately upstream of the gas supply connection to the unit. Use a soap and water solution or liquid gas leak detector to coat each joint in the piping system and look for bubbles which indicate gas leaks. Repair all gas leaks.

**CAUTION:** THE UNIT AND ITS INDIVIDUAL SHUT-OFF VALVE MUST BE DISCONNECTED FROM THE GAS SUPPLY PIPING SYSTEM DURING PRESSURE TESTING OF THAT SYSTEM AT TEST PRESSURES IN EXCESS OF 1/2 PSIG. THE UNIT MUST BE ISOLATED FROM THE GAS SUPPLY PIPING SYSTEM BY CLOSING ITS INDIVIDUAL MANUAL SHUT-OFF VALVE DURING ANY PRESSURE TESTING OF THE GAS SUPPLY PIPING SYSTEM AT TEST PRESSURES EQUAL TO OR LESS THAN 1/2 PSIG. PRESSURES IN EXCESS OF 1/2 PSIG WILL CAUSE DAMAGE TO THE CONTROL VALVE AND MAY CAUSE DAMAGE TO THE SHUT-OFF VALVE.

**DANGER:** DO NOT USE CANDLES, MATCHES OR OTHER IGNITION SOURCES WHEN CHECKING FOR LEAKS. FUEL GASES ARE VERY FLAMMABLE AND IN CERTAIN CONCENTRATIONS, EXPLOSIVE. CHECKING FOR LEAKS WITH AN OPEN FLAME MAY LEAD TO FIRE OR EXPLOSION.
INSTALLATION INSTRUCTIONS

In planning the installation for the fireplace it is necessary to determine where the unit is to be installed, the routing of the B-type vent system, and whether optional accessories are to be used. Gas supply piping should also be planned.

Model SF3624-TV (with the use of the Outside Air Kit) can be installed in a bedroom (in the United States) which has a total volume of unconfined space appropriate to the particular installation. Refer to the National Fuel Gas Code ANSI Z223.1/NFPA 54 - (current edition), the Uniform Mechanical Code - (current edition), and Local Building Officials for the options allowed in obtaining an effective bedroom volume of unconfined space.

The fireplace can be mounted on any of the following surfaces:
1. A flat combustible surface.
2. A raised wooden platform.
3. Four (4) corner supports.

(Example: four (4) concrete masonry blocks.) These supports must be positioned so they contact all four corner edges on the bottom of the unit.

If the fireplace is installed directly on carpeting, tile, or other combustible material other than wood flooring, the appliance shall be installed on a metal or wood panel extending the full width and depth of the unit.

Fireplace framing can be built before or after the fireplace is set in place. Framing should be positioned to accommodate wall covering and fireplace facing material. The fireplace framing should be constructed of 2 x 4 lumber or heavier. The framing headers may rest on the fireplace standoffs. Refer to Figure 7.1 for fireplace and framing reference dimensions.

CAUTION: VERIFY FIREPLACE DIMENSIONS, FRAMING METHODS AND WALL COVERING DETAILS BEFORE FRAMING CONSTRUCTION BEGINS.

Determine the exact position of the fireplace so that the vent run can be planned. Figure 2.1 shows possible locations for the fireplace; inside of a room, flush mount in a chase, or installed in a corner. Using a level, make sure the fireplace is properly positioned and squared.

WARNING: DUE TO HIGH TEMPERATURES, THE APPLIANCE SHOULD BE LOCATED OUT OF TRAFFIC AND AWAY FROM FURNITURE AND DRAPERIES. CLOTHING OR OTHER FLAMMABLE MATERIAL SHOULD NOT BE PLACED ON OR NEAR THE APPLIANCE.
Installing Chimney/Vent System

Model SF3624TV is approved to be used with 8" B-Type Gas Vent or 8" class-A All Fuel Chimney. Under most conditions the fireplace system will draw properly if the chimney height is determined in accordance with the following guidelines:

1. If your chimney penetrates the roof within 10' of its peak, it must be extended at least 24" above your roof's peak and be at least 36" above the highest point of the roof opening, (see below).

2. If the chimney penetrates the roof farther than 10' from its peak, measure from the centerline of the chimney to a point 10' away, between the chimney and the peak of the roof. The top of the chimney must be at least 36" above the highest point of the roof opening, (see below).

3. The 10' Rule of Thumb is a guide for calculating chimney height that works under most conditions. However, many factors can cause the need for additional chimney height beyond what 10' Rule of Thumb would indicate. Topographical factors can cause high-pressure zones, which prevent a chimney from drawing. This can occur if the house is located in a low-lying area, in a valley or near the base of a cliff or hillside. The same situation can occur if the chimney is near other steep rooflines or tall buildings. Areas with high winds also frequently require higher than normal chimneys.

Certain styles of architecture tend to interfere with a fireplace's draw. If the room in which the fireplace is located has a very high ceiling, smoke may enter the room unless the chimney is terminated at a level higher than that of the ceiling, even if the 10' Rule of Thumb indicates a shorter chimney height.

**Note: (90-degree elbows are not approved!)** In the event of draft related problems due to extreme wind conditions a special draft inducing cap is available.

**Warning!** This gas appliance must not be connected to a chimney flue serving a separate solid-fuel burning appliance.

Installing Outside Air Kit

Model SF3624-TV is supplied with the component parts for outside combustion with the exception of the 4" flex duct. It is recommended that the outside air system be used whenever possible. Connect 4" Class-1 Flex duct or Metal Vent to duct collar on side of firebox, run duct to fresh air source and terminate using duct termination cap. The Outside air can be opened by pushing control knob toward back of fireplace and closed by pulling towards front (Refer to figure 7.2).
Finishing the Wall

Finish the wall with the material of your choice. Do not install a combustible mantle or other combustible projection above the fireplace opening unless it is a minimum of 12 inches above top of fireplace opening. (Figure 8.1)

CAUTION: All joints between the finished wall and the fireplace surround (Top and Sides) can only be sealed with non-combustible material. Only non-combustible material can be applied as facing to the fireplace surround. (Figure 8.1)

Hearth Extension

A Hearth Extension may be installed. But it is not required for decorative gas appliances.

Gas Log Installation

1. Fill burner pan with vermiculite supplied with log set. Note! On L.P. models be careful not to pour vermiculite over brass air mixer attached to burner pan. Air mixer holes must not be obstructed!
2. Spread the ember material over the vermiculite.
3. At this time, we suggest you test fire the burner. Refer to start up instructions on page 12. Important! The fireplace damper must be in full open position.
4. Place the grate over the burner and install the logs as illustrated on page 9.
5. The last step is to cover floor of fireplace with volcanic rock around the sides and in front of burner pan to enhance overall appearance. Note: On L.P. models be careful not to pour black cinders over brass air mixer attached to burner pan. Air mixer holes must not be obstructed!
Placement Instructions

- Place the back bottom log (log #1) as shown in the Illustration above. It should be positioned on the back of the grate.
- Place the front bottom log pieces (logs #2 and #3) as shown. They should be positioned on the front of the grate.
- The front bottom log pieces (logs #2 and #3) should be touching each other in order to form what will look like a rotten or burned out chamber in the front log section (see bottom left picture).
- Log #4 and #5 should be placed on top of bottom logs as shown in bottom left picture.
- Log #6 and #7 should be placed on top as shown in top right picture.
- Bottom right picture shows final log arrangement.
OPTIONAL GLASS DOOR INSTALLATION

1. INSTALL GB DOOR TRACKS AND HINGE SPRINGS AS ILLUSTRATED IN FIGURE 1 USING 6 SCREWS IN KIT.
2. SCREW HANDLES ON TO DOORS.
3. INSTALL DOORS AS SHOWN IN FIGURE 2.

NOTE!

☐ HINGE SPRINGS CAN BE MOVED TO ADJUST DOOR ALIGNMENT.
☐ DOOR LOCKING TABS CAN BE SET BY BENDING UP OR DOWN. SEE FIGURE 3.
☐ USE MILD SOAP AND WATER TO CLEAN METAL SURFACES.
☐ DO NOT USE BRASS OR ABRASIVE CLEANERS.
☐ ALLOW GLASS TO COOL BEFORE CLEANING.

CAUTION!

☐ BURN WITH DOORS ONLY IN FULL OPEN POSITION.
☐ BROKEN OR DAMAGED COMPONENTS NEED TO BE REMOVED CAREFULLY. BROKEN GLASS OR HARDWARE CAN BE REPLACED BY ORIGINAL FACTORY PARTS ONLY. BROKEN GLASS MUST BE REPLACED BY COMPLETE FACTORY ASSEMBLED BIFOLD ONLY.
☐ DO NOT SUBSTITUTE ANY MATERIALS NOT MANUFACTURED SPECIFICALLY FOR THIS APPLIANCE.
☐ DO NOT STRIKE OR SLAM GLASS DOORS WHEN CLOSING.
☐ DO NOT OPERATE THIS APPLIANCE IF GLASS IS BROKEN.
☐ ALLOW GLASS TO COOL BEFORE CLEANING GLASS PANES. GLASS PANES CAN BE CLEANED WITH A NON-ABRASIVE GLASS CLEANER.

OPERATING GUIDELINES

Upon completing the gas line connection, a small amount of air will be in the lines. When first lighting the pilot light, it will take a few minutes for the lines to purge themselves of this air. Once the purging is complete, the pilot and burner will light and operate as indicated in the instruction manual. Subsequent lighting of the appliance will not require such purging.

CAUTION: DURING THE INITIAL PURGING AND SUBSEQUENT LIGHTING, NEVER ALLOW THE GAS VALVE CONTROL KNOB TO REMAIN DEPRESSED IN THE “PILOT” POSITION WITHOUT PUSHING THE RED IGNITOR BUTTON AT LEAST ONCE EVERY SECOND.

WARNING: CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURE AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION. YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME ROOM AS THE APPLIANCE.

IMPORTANT: TURN OFF GAS BEFORE SERVICING APPLIANCE. IT IS RECOMMENDED THAT A COMPETENT SERVICE TECHNICIAN PERFORM THESE CHECKUPS AT THE BEGINNING OF EACH HEATING SEASON.
OPERATING GUIDELINES (CONT’D)

When lit for the first time, the appliance will emit a slight odor for an hour or two. This is due to paint and lubricants used in the manufacturing process. The main burner flame characteristics are steady, not lifting or floating. Typically, the top 3/4 inch of the pilot generator should be engulfed in the pilot flame. A periodic check of these characteristics is necessary.

CAUTION: THE LOGS CAN GET VERY HOT! HANDLE ONLY WHEN COOL

MAINTENANCE INSTRUCTIONS

Visually inspect pilot periodically. Brush or blow away any dust or linen accumulations. If pilot orifice is plugged, disassembly may be required to remove any foreign material from orifice or tubing.

Venting system should be periodically examined by a qualified service technician or agency to ensure proper air flow.

WIRING DIAGRAM

WARNING: DO NOT CONNECT 110-120 VAC TO THE GAS CONTROL VALVE OR CONTROL WIRING SYSTEM OF THIS UNIT.
FOR YOUR SAFETY READ BEFORE LIGHTING

WARNING: IF YOU DO NOT FOLLOW THESE INSTRUCTIONS EXACTLY, A FIRE OR EXPLOSION MAY RESULT CAUSING PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

A. This appliance has a pilot. When lighting the pilot, follow these instructions exactly.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS:

☐ Do not try to light any appliance
☐ Do not touch any electric switch:
☐ Do not use any phone in your building.
☐ Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions
☐ If you cannot reach your gas supplier call the fire department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand don’t try to repair it, call a qualified service technician. Forced or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the gas control system which has been under water.

LIGHTING INSTRUCTIONS

1. “STOP” Read the safety information above first.
2. To access controls, open valve access panel.
3. Turn the control to the “OFF” position. To do this, you must turn the knob clockwise to the pilot position and then press in and continue turning clockwise to the “OFF” position.

4. WAIT FIVE (5) MINUTES TO CLEAR OUT ANY GAS. If you then smell gas, STOP! Follow “B” in the safety information above. If you don’t smell gas, go to next step.
5. The pilot should not require accessing for lighting purposes. The pilot is located inside the combustion chamber.
6. To put the control in the pilot position turn the control knob counter-clockwise to the pilot position.

7. To light the pilot depress the control knob and then depress the red piezo button until it makes a clicking sound. It may be necessary to repeat this step. If the pilot does not light after Ten seconds, go back to step 3. The control knob should be held Down for a MINUTE after pilot ignition. If the pilot lights, but will not stay lit after two tries, turn the gas control knob to the “OFF” position and call your Service technician or gas supplier. If the control knob does not pop out when released, STOP - shut off the gas supply to the fireplace control valve and immediately call your service technician or gas supplier.

8. After the pilot has been lit, the Burner can be turned on by turning the knob counter-clockwise To the “ON” position. Then turn the ON/OFF switch to the “ON” position.

Note: Damper control lever must be in the “open” position to ignite.
TO TURN OFF GAS TO APPLIANCE

1. Open valve access door panel
2. Turn knob clockwise to pilot position then depress and continue turning to “OFF”
3. Close access door panel

LPG (PROPANE) WARNING

THE FOLLOWING WARNING APPLIES TO INSTALLATIONS USING L.P. (PROPANE GAS):

WARNING: To avoid possible injury, fire and explosion, please read and follow these precautions and all instructions of this appliance before lighting the pilot. This appliance uses L.P. (Propane) gas which is heavier than air and will remain at the floor level if there is a leak. Before lighting, smell at floor level and/or use other means (such as using a soap solution on all piping and connections, using a gas detector, etc.) to check for gas leaks. NOTE: L.P. (Propane) gas can become odorless and CANNOT always be detected by smell. If you smell gas, detect a gas leak or suspect that a gas leak exists, follow these rules:

1. Get all people out of building.
2. DO NOT light matches. DO NOT turn electric lights or switches on or off in area. DO NOT use an electric fan to remove gas from area. DO NOT use a telephone inside of building.
3. Shut off gas at L.P. tank outside of building.
4. Telephone gas company and fire department. Ask instructions. Before hanging up, give your name, address and phone number. DO NOT go back into building.

If your L.P. tank runs out of fuel, turn off gas at the appliance. After L.P. tank is refilled, appliance must be re-lit according to manufacturer’s instructions. If the gas control has been exposed to WATER in any way, DO NOT try to use it. It must be replaced. DO NOT attempt repair on gas control or appliance.

Tampering is DANGEROUS and voids all warranties. Any component that is found to be faulty, must be replaced with an approved component.

IMPORTANT: Always keep the appliance area clear and free from combustible materials, gasoline and other flammable vapors and liquids.

Never obstruct the flow of combustion and ventilation air. Keep the front of the appliance clear of all obstacles and materials.

To obtain proper operation, it is imperative that the pilot and main burner flame characteristics are steady, not lifting or floating. Typically the top 3/4 Inch at the pilot generator should be engulfed in the pilot flame. (Figure 11)

IMPORTANT - PLEASE NOTE L.P. GAS MODELS
Mildeete SOOT ACCUMULATION IS CONSIDERED NORMAL FOR L.P. GAS LOGS. TO KEEP THIS SOOT ACCUMULATION TO A MINIMUM, REDUCE THE FLAME IMPINGEMENT BY SPACING FRONT AND BACK LOGS AS FAR APART AS POSSIBLE.
## TROUBLE SHOOTING

With proper installation and maintenance, your new Gas Fireplace should provide years of trouble-free service. If you do experience a problem, refer to the trouble shooting guide shown below. This guide will assist a qualified service person in the diagnosis of problems and the corrective action to be taken.

<table>
<thead>
<tr>
<th>SYMPTOM</th>
<th>POSSIBLE CAUSE</th>
<th>CORRECTIVE ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Spark ignitor will not light pilot after triggering</td>
<td>A. Defective ignitor (no spark at electrode).</td>
<td>1. Check for spark at electrode and pilot; if no spark exist and electrode wire is properly connected, replace ignitor.</td>
</tr>
<tr>
<td></td>
<td>B. Defective or misaligned electrode at pilot (spark at electrode)</td>
<td>1. Using a match, light pilot. If pilot lights, turn off pilot and trigger the red button again. If pilot lights, an improper gas/air mixture caused the bad lighting and a longer purge period is recommended. If pilot will not light - check gap at electrode and pilot should be 1/8 inch to have a strong spark. If OK, replace pilot.</td>
</tr>
<tr>
<td></td>
<td>C. No gas or low gas Pressure</td>
<td>1. Check remote shut off valves from fireplace. usually there is a valve near the fireplace and sometimes there is a valve near the main. there can be more than one valve between the fireplace and main.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2. Low pressure can be caused by a variety of situations such as a bent line, too narrow diameter of pipe or even low line pressure. Check for kinked lines. If none, consult with Plumber or gas supplier. If L.P. Gas is used you may be out of fuel.</td>
</tr>

TWO YEAR LIMITED WARRANTY

THIS WARRANTY IS LIMITED TO TOP-VENT GAS FIREPLACES MANUFACTURED AND ASSEMBLED BY GOLDEN BLOUNT.

IF GOLDEN BLOUNT FINDS THAT ANY PART OR PORTION OF THE FIREPLACE COVERED BY THIS WARRANTY IS DEFECTIVE IN MATERIAL OR WORKMANSHIP UNDER NORMAL USE AND SERVICE AS DESCRIBED IN THE INSTALLATION AND OPERATING INSTRUCTIONS, GOLDEN BLOUNT WILL TAKE THE FOLLOWING ACTIONS:

1. WITHIN THE FIRST YEAR FROM THE DATE OF INSTALLATION, GOLDEN BLOUNT SHALL, AT ITS OPTION REPLACE OR REPAIR ANY SUCH DEFECT IN MATERIAL OR WORKMANSHIP, AT GOLDEN BLOUNT'S EXPENSE, INCLUDING A REASONABLE LABOR ALLOWANCE AS DETERMINED BY GOLDEN BLOUNT. GOLDEN BLOUNT SHALL NOT BE RESPONSIBLE FOR ANY OTHER LABOR COSTS, OR EXPENSES, INCLUDING INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES.

2. DURING THE SECOND YEAR AFTER THE DATE OF INSTALLATION, GOLDEN BLOUNT SHALL SUPPLY REPLACEMENT PARTS AT THE CURRENT WHOLESALE PRICE, BUT GOLDEN BLOUNT SHALL NOT BE RESPONSIBLE FOR ANY LABOR, TRANSPORTATION, OR THE INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

3. ALL FACTORY OPTIONAL COMPONENTS OR ACCESSORIES FOUND TO BE DEFECTIVE WILL BE REPAIRED OR REPLACED WITHOUT CHARGE DURING THE FIRST YEAR AFTER INSTALLATION.

GOLDEN BLOUNT MAY DISCHARGE ITS ENTIRE WARRANTY LIABILITY BY REFUNDING THE PRICE OF THE PRODUCT.

PRODUCTS MADE BY OTHER MANUFACTURERS, SOLD WITH THE FIREPLACE OR THEREAFTER ARE NOT COVERED BY THIS LIMITED WARRANTY. THE USE OF OTHER UNAUTHORIZED COMPONENTS WILL MAKE THIS WARRANTY NULL AND VOID.

THIS LIMITED WARRANTY WILL BE VOID IF THE APPLIANCE IS NOT INSTALLED BY A QUALIFIED INSTALLER AND ACCORDING TO THE INSTALLATION INSTRUCTIONS. THE LIMITED WARRANTY ALSO IS VOID IF THE FIREPLACE IS NOT OPERATED, AT ALL TIMES, ACCORDING TO THE OPERATING INSTRUCTIONS FURNISHED.

SOME STATES DO NOT ALLOW EXCLUSION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES OR LIMITS ON THE DURATION OF IMPLIED WARRANTIES SO THESE LIMITATIONS MAY NOT APPLY TO YOU.

GOLDEN BLOUNT RESERVES THE RIGHT TO INVESTIGATE ANY AND ALL CLAIMS AGAINST THIS WARRANTY AND TO DECIDE ON THE METHOD OF SETTLEMENT.

GOLDEN BLOUNT IS NOT RESPONSIBLE FOR WARRANTY WORK COMPLETED WITHOUT OBTAINING GOLDEN BLOUNT’S CONSENT. GOLDEN BLOUNT EMPLOYEES AND DEALERS HAVE NO RIGHT TO ALTER THIS WRITTEN WARRANTY.

WARRANTY INFORMATION

PLEASE BE ABLE TO PROVIDE THE FOLLOWING INFORMATION WHEN COMMUNICATING WITH GOLDEN BLOUNT OR ITS DEALERS OR DISTRIBUTORS REGARDING SERVICE UNDER THIS WARRANTY.

MODEL NO.  Golden Blount
SERIAL NO.  4301 Westgrove Dr.
