Environmental Science

The Environmental Science programs offer opportunities for science-oriented and environmentally-motivated students to participate in authentic situations as real environmental scientists. Students experience field study, discuss and take action on environmental issues, learn about the environment from the perspectives of history, law, and public policy, and strive to understand the balance between environment, politics, economics, and culture. Students may pursue Gifted & Talented, Advanced Placement, and college articulated coursework. Research and internship opportunities may also be available.
