Thank you for purchasing a Panasonic Hybrid IP-PBX.
Please read this manual carefully before using this product and save this manual for future use.

KX-TDA50: PSMPR Software File Version 6.0000 or later
KX-TDA100/KX-TDA200: PMPR Software File Version 5.0000 or later
KX-TDA600: PLMPR Software File Version 5.0000 or later
Introduction

About this Programming Manual
The PC Programming Manual is designed to serve as a system programming reference for the Panasonic Hybrid IP-PBX. It explains how to program this PBX using the Maintenance Console software. The PC Programming Manual is divided into the following sections:

Section 1, Overview
Provides an overview of programming the PBX.

Section 2, Introduction of Maintenance Console
Explains the layout and menus of the Maintenance Console.

Sections 3 – 13, Maintenance Console Operating Instructions
Serves as reference operating instructions when using the Maintenance Console software to program the PBX.

Section 14, Appendix
Provides a list of all related PC programming items for each feature as Feature Programming References.

References Found in the PC Programming Manual

Programming Manual References
Related sections of the PC Programming Manual are listed for your reference.

Feature Manual References
The Feature Manual explains what the PBX can do, as well as how to obtain the most of its many features and facilities. Sections from the Feature Manual are listed throughout this manual for your reference.

Installation Manual References
The Installation Manual provides instructions detailing the installation and maintenance of the PBX. Sections from the Installation Manual are listed throughout this manual for your reference.

Links to Other Pages and Manuals
If you are viewing this manual with a PC, certain items are linked to different sections of this and other PBX manuals. Click on a link to jump to that section.
Linked items include:
- Installation Manual References
- PC Programming Manual References
- Feature Manual References

Safety Notices
Please observe the safety notices in this manual in order to avoid danger to users or other people, and prevent damage to property.
The notices are classified as follows, according to the severity of injury or damage:

| WARNING | This notice means that misuse could result in death or serious injury. |
CAUTION  This notice means that misuse could result in injury or damage to property.

WARNING  
Unplug the PBX from the AC outlet if it emits smoke, an abnormal smell or makes unusual noise. These conditions can cause fire or electric shock. Confirm that smoke has stopped and contact an authorized Panasonic Factory Service Center.

CAUTION  
Do not remove the SD Memory Card while power is supplied to the PBX. Doing so may cause the PBX to fail to start when you try to restart the system.

Note  
1. During a long programming session, it is highly recommended that you periodically save the system data to the SD Memory Card. If the PBX undergoes a sudden power failure or if the system is reset for some reason, all the system data in RAM will be lost. However, if system data has been saved to the SD Memory Card, it can be easily restored. To save the system data to the SD Memory Card, (1) click the “SD Memory Backup” icon before resetting the PBX or turning off the power, or (2) exit the Maintenance Console so that the PBX automatically saves the system data.
2. The PC will not perform any shutdown operation, or enter the power-saving system standby mode while the Maintenance Console is connected to the PBX. To perform either of the operations above, first close the connection to the PBX.

Trademarks  
• Microsoft, Windows, and Windows Vista are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
• All other trademarks identified herein are the property of their respective owners.
• Microsoft product screen shot(s) reprinted with permission from Microsoft Corporation.

NOTES  
• The contents of this manual apply to PBXs with a certain software version, as indicated on the cover of this manual. To confirm the software version of your PBX, see How do I confirm the software version of the PBX or installed cards? in Maintenance Console Software in 2.7.1 Frequently Asked Questions (FAQ).
• Some optional hardware, software, and features are not available in some areas, or for some PBX models. Please consult your certified Panasonic dealer for more information.
• Product specifications are subject to change without notice.
  In some cases, additional information, including updates to this and other manuals, is included in the Maintenance Console’s Information before programming. Install the latest version of Maintenance Console to view this information.
• In this manual, model number suffixes (e.g., KX-TDA50G) are omitted unless necessary.

Section 1
Overview

This section provides an overview of programming the PBX.
1.1 Introduction

1.1.1 Introduction

These programming instructions are designed to serve as an overall system programming reference for the PBX. Each feature in the PBX has default settings that can be changed to customize the PBX to your requirements. These settings control the functions of the PBX, and changing them is referred to as "system programming".

Only one person can perform system programming at a time. Any other users trying to enter programming mode will be denied access.

Ways to Program

There are two programming methods:

- **PC (Personal Computer) Programming**
  All features and settings of the PBX can be programmed through PC programming with Maintenance Console. Installing and starting the Maintenance Console is described in Section 1.2 PC Programming. Individual PC programming items are described in Section 2 Introduction of Maintenance Console.

- **PT (Proprietary Telephone) Programming**
  A subset of the features and settings of the PBX can be programmed using a PT. PT programming is described in the PT Programming Manual.
1.1.2 Entering Characters

The characters on a white background below can be used when storing a name, message, password or other text entry data using a PC. The available characters vary according to the model of PBX.

Note: The table above shows the available characters for entering text in a PC environment. The specific characters available may vary depending on the model of PBX.
1.2 PC Programming

1.2.1 Installing and Starting the Maintenance Console

System programming, diagnosis and administration can be performed with a PC using the Maintenance Console. This section briefly describes how to install and start the Maintenance Console when the PC and the PBX are connected by USB cable.

System Requirements

Required Operating System
• Microsoft® Windows® XP, Windows Vista® Business, or Windows 7 operating system

Minimum Hardware Requirements
• HDD: 100 MB of available hard disk space

Recommended Display Settings
• Screen resolution: XGA (1024 × 768)
• DPI setting: Normal size (96 DPI)

Installing the Maintenance Console

Note
• Make sure to install and use the latest version of the Maintenance Console.
• To install or uninstall the software on a PC running Windows XP Professional, you must be logged in as a user in either the "Administrators" or "Power Users" group.
• To install or uninstall the software on a PC running Windows Vista Business or Windows 7 Professional, you must be logged in as a user in the "Administrators" group.
• To connect the PC to the PBX via USB, the KX-TDA USB driver must be installed. Follow the instructions of the wizard to install the KX-TDA USB driver. When the PBX is first connected to the PC via USB, you may be asked to select the appropriate USB driver. Browse for and select the KX-TDA USB driver that was installed previously.

1. Copy the setup file of the Maintenance Console to your PC.
2. Double-click the setup file to run the installer.
3. Follow the on-screen instructions provided by the installation wizard.

Starting the Maintenance Console and Assigning the Basic Items (Quick Setup)

When you start the Maintenance Console with the Installer Level Programmer Code and connect to the PBX for the first time after initialization (with the factory default setting), Quick Setup will launch automatically. During Quick Setup, you will set up the following basic items. For details about the basic items, refer to "14.1.2 Quick Setup" in the Feature Manual.

1. Connect the PC to the PBX with a USB cable.
2. Start Maintenance Console from the Start menu.
3. "Information before programming" appears.
a. Carefully read this important additional information, which includes updates to this and other manuals.
b. Click OK to close this window.

   
   **Note**
   
   There are 2 other Programmer Codes with limited authorization: Administrator Level (default: ADMIN), and User Level (default: USER). (→ 1.2.2 Password Security)
   
b. Click OK.

5. Click Connect.

6. a. Select your PBX model from PBX Model.
   b. Select the USB tab.
   
   **Note**
   
   To connect to the PBX via USB, the KX-TDA USB driver must be installed on the PC, as explained above in "Installing the Maintenance Console".
   
c. Enter the system password for installer (default: 1234).
   d. Click Connect.

7. Follow the instructions of the Quick Setup wizard for the basic items in Quick Setup.
You may now begin programming the PBX.
1.2.2 Password Security

To maintain system security, system passwords are required to access certain programming functions of the PBX. By giving different users access to different passwords, it is possible to control the amount of programming that each user is able to perform.

The following types of system passwords are available:

<table>
<thead>
<tr>
<th>Password</th>
<th>Description</th>
<th>Format</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Password for User</td>
<td>Used with the user-level programmer code to access user-level PC programming. The installer can specify which system programming settings are available.</td>
<td>4 – 10 characters</td>
</tr>
<tr>
<td>System Password for Administrator</td>
<td>Used with the administrator-level programmer code to access administrator-level PC programming. The installer can specify which system programming settings are available.</td>
<td></td>
</tr>
<tr>
<td>System Password for Installer</td>
<td>Used with the installer-level programmer code to access installer-level PC programming. All system programming settings are available.</td>
<td></td>
</tr>
</tbody>
</table>

The three programmer codes used for PC programming can be set through Maintenance Console.

For more information about programmer codes, see 2.1.2 Access Levels.

**CAUTION**

*To the Administrator or Installer regarding the system password*

1. Please provide all system passwords to the customer.
2. To avoid unauthorized access and possible abuse of the PBX, keep the passwords secret, and inform the customer of the importance of the passwords, and the possible dangers if they become known to others.
3. The PBX has default passwords preset. For security, change these passwords the first time that you program the PBX.
4. Change the passwords periodically.
5. It is strongly recommended that passwords of 10 numbers or characters be used for maximum protection against unauthorized access. For a list of numbers and characters that can be used in system passwords, see 1.1.2 Entering Characters.
6. If a system password is forgotten, it can be found by loading a backup of the system data into a PC, and checking the password using the Maintenance Console software. If you do not have a backup of the system data, you must reset the PBX to its factory defaults and reprogram it. Therefore, we strongly recommend maintaining a backup of the system data. For more information on how to back up the system data, refer to the on-line help of the Maintenance Console. However, as system passwords can be extracted from backup copies of the system data file, do not allow unauthorized access to these files.
Section 2

Introduction of Maintenance Console

This section serves as reference operating instructions when using the Maintenance Console software to program the PBX.
2.1 Introduction

2.1.1 Starting Maintenance Console and Software Modes

Every time Maintenance Console is started, a dialog box will appear. From here, you can enter any of the 2 available software modes.

- **Batch mode**
  Batch mode allows you to create new system data files, and make modifications to system data files stored on your PC, without being connected to the PBX. When you connect to the PBX, the modified data will be uploaded at one time.

- **Interactive mode**
  Interactive mode allows you to directly modify the system data and settings stored in the PBX's memory from a PC that is connected to the PBX. This mode displays the system data that is currently being used by the PBX, rather than the system data stored on the SD memory card. Data can be modified and results displayed in real time.

**To start Maintenance Console in Batch mode**

1. Enter the relevant programmer code.
2. Click **OK**.
   The program launcher will appear.
3. Select an option.
   - Select **New** to create a new system data file.
   - Select **Open** to open an existing system data file.

**To start Maintenance Console in Interactive mode**

1. Enter the relevant programmer code.
2. Click **OK**.
   The program launcher will appear.
3. Click **Connect**.
   Connection options will be displayed.
   - Select a **Profile Name** if you want to use a pre-saved profile. This option is only available when one or more profiles have been previously stored.
     a. Select the profile to use from the drop-down list.
     b. If the system password for the PBX has not been stored with the profile, enter it.
        If the system password has been stored with the selected profile, it does not need to be entered.
   - To enter the parameters manually, select the **PBX Model** and select the method of connecting to the PBX.
     a. Specify the settings as required. For more details, see the tables below.
     b. Enter the system password for the PBX.
4. Click **Connect**.
   Maintenance Console will start, and automatically connect to the PBX. If this is the first time that Maintenance Console has connected to the PBX, and the date and time of the PBX have not yet been set, the Quick Setup wizard will run. For more details, see **Starting the Maintenance Console and Assigning the Basic Items (Quick Setup)**.
### Connection Settings for RS-232C

<table>
<thead>
<tr>
<th>Setting</th>
<th>Values</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port</td>
<td>COMx</td>
<td>Specify the number of the COM port assigned to the PC’s RS-232C interface. Only available COM ports are displayed.</td>
</tr>
<tr>
<td>Baud Rate (bps)</td>
<td>2400, 4800, 9600, 19200, 38400, 57600, 115200</td>
<td>Specify the speed of data transmission.</td>
</tr>
</tbody>
</table>

### Connection Settings for Modem

<table>
<thead>
<tr>
<th>Setting</th>
<th>Values</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dial Number</td>
<td>1-9, 0, *, #, -, &quot;,&quot; [comma], T, P, W</td>
<td>Enter the telephone number to be dialed to access the PBX. T: Converts the Dial Type from Pulse to Tone. &quot;,&quot; [comma], P, W: Inserts a pause.</td>
</tr>
<tr>
<td>Dial Type</td>
<td>Auto(Tone), Auto(Pulse), Manual, Manual</td>
<td>Specify the outgoing dialing method. If Manual is chosen, dialing must be done with a connected telephone.</td>
</tr>
<tr>
<td>Comment</td>
<td>Max. 40 characters</td>
<td>Enter a comment to identify the set of values.</td>
</tr>
<tr>
<td>Port</td>
<td>COMx</td>
<td>Specify the number of the COM port assigned to the PC’s modem interface. Only available COM ports will be displayed.</td>
</tr>
<tr>
<td>Baud Rate (bps)</td>
<td>1200, 2400, 4800, 9600, 19200, 38400</td>
<td>Specify the speed of data transmission.</td>
</tr>
<tr>
<td>Modem Initialize</td>
<td>−</td>
<td>Enter the modem initialize command, and click Initialize to send the command to the modem. For more details, refer to your modem’s instruction manual.</td>
</tr>
</tbody>
</table>

### Connection Settings for LAN

<table>
<thead>
<tr>
<th>Setting</th>
<th>Values</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP Address</td>
<td>1.0.0.0–223.255.255.255</td>
<td>Specify the IP address of the PBX on the LAN. Enter the same IP address that was input in IP Address of 3.30 [1-1] Slot—Card Property - CTILINK (KX-TDA100/KX-TDA200/ KX-TDA600 only).</td>
</tr>
</tbody>
</table>
### Setting Values Explanation

<table>
<thead>
<tr>
<th>Setting</th>
<th>Values</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port Number</td>
<td>10000–65535</td>
<td>Specify the port number used to access the PBX via LAN. Enter the same port number that was input in Maintenance Port Number of 3.30 [1-1] Slot—Card Property - CTILINK (KX-TDA100/KX-TDA200/KX-TDA600 only) or 3.19 [1-1] Slot—Card Property - IP Gateway (KX-TDA50 only).</td>
</tr>
</tbody>
</table>

### 2.1.2 Access Levels

There are three main levels of access to the Maintenance Console: User, Administrator and Installer. Each level has its own Programmer Code, which must be entered to run the Maintenance Console. The allowed format for each programmer code is as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>User Level Programmer Code</td>
<td>0 – 16 characters</td>
</tr>
<tr>
<td>Administrator Level Programmer Code</td>
<td>4 – 16 characters</td>
</tr>
<tr>
<td>Installer Level Programmer Code</td>
<td>4 – 16 characters</td>
</tr>
</tbody>
</table>

Access to menu options within the Maintenance Console is restricted depending on the Programmer Code, and the current software mode (see 2.1.1 Starting Maintenance Console and Software Modes). When a menu option is limited to certain access levels, this is noted in this manual in the initial description of that menu option, for example: "This option is only available at Installer level."

If a sentence like this does not appear under the heading, the menu option is available at all levels.

The target users for each access level are as follows:

<table>
<thead>
<tr>
<th>Access Level</th>
<th>User</th>
</tr>
</thead>
<tbody>
<tr>
<td>User</td>
<td>For end users</td>
</tr>
<tr>
<td>Administrator</td>
<td>For system administrators</td>
</tr>
<tr>
<td>Installer</td>
<td>For dealers and system installers</td>
</tr>
</tbody>
</table>

The options available in each mode and access level are shown below. The access levels are abbreviated as follows:

- U: User; A: Administrator; I: Installer

A check mark indicates that the menu option is available for that access level.

2.1.3 Software Interface

This section explains the functions of the various elements of the software interface.

Main Window

The window of the Maintenance Console software is divided into several areas, as shown below:

1. **Menu Bar**
   Provides access to file management and connection options, as well as tools and utilities used in programming the PBX. For details, see Sections 2.2 Program launcher to 2.7 Help.

2. **Tool Bar**
   Provides easy access to commonly used software functions.
   Two tool bars are provided, as follows:
   - **File**
     Contains the icon for saving files. For details, see Section 2.3.2 File—Save.
• **Tools**
  Contains icons for backing up PBX data to the SD Memory Card, viewing extension information, and accessing Online Help. For details, see Sections 2.5.1 *Tool—SD memory backup* and 2.5.7 *Tool—Extension List View*.

These menus can be positioned freely. Click and drag the title bar of a menu to move it to another position. It will automatically snap in to position above, below, to the left, or to the right of the main window if released there. Otherwise, it will float separately from the main window.

Whether the tool bar is displayed or not can be chosen by selecting *Toolbar* from the *View* menu.

3. **Tab Bar**

The name of each screen currently open is displayed in a tab in this tab bar. When multiple screens are open at the same time, click on the tab of a screen to display the options associated with that screen.

4. **System Menu**

Provides access to the settings used for programming the PBX, grouped into 11 topics. For details, see Section 3 [1] **Configuration** to Section 13 [11] **Maintenance**.

To display the individual screens within a topic, click the topic heading. It will expand to show the sub-topics.

• If a sub-topic contains more than one screen, clicking the name of the sub-topic will display the names of individual screens. Clicking an expanded sub-topic will hide the names of individual screens.

Double-click on a screen name to open that screen in 6. **Main Screen** below.

This menu can be positioned freely. Click and drag the title bar of the menu to move it to another position. It will automatically snap in to either the left side or right side of the main window if released there. Otherwise, it will float separately from the main window.

Whether the system menu is displayed or not can be chosen by selecting *System Menu* from the *View* menu.

5. **Status Bar**

The status bar displays information on the current state of the Maintenance Console. Whether the status bar is displayed or not can be chosen by selecting *Statusbar* from the *View* menu.

The information displayed is as follows, in order from left to right:

<table>
<thead>
<tr>
<th>Area</th>
<th>Values</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program Mode</td>
<td>Batch Mode xxx Interactive Mode</td>
<td>See 2.1.1 Starting Maintenance Console and Software Modes above. &quot;xxx&quot; is replaced by the name of the current system data file.</td>
</tr>
<tr>
<td>PBX Type</td>
<td>Type: TDA50/TDA100/ TDA200/TDA600</td>
<td>Displays the type of PBX being programmed.</td>
</tr>
<tr>
<td>Access Level</td>
<td>Level : User Administrator Installer</td>
<td>Displays the current access level, determined by the Programmer Code entered when starting Maintenance Console. See 2.1.2 Access Levels for more information.</td>
</tr>
<tr>
<td>PBX System Data Version</td>
<td>Versionxxxx-xxx</td>
<td>Displays the version number of the system software installed to the PBX. The first 3 digits are the version number, and the last 3 digits are the revision number.</td>
</tr>
<tr>
<td>PBX Region Code</td>
<td>Regionxxxx-xxx</td>
<td>Displays the region code assigned to the PBX and Maintenance Console. The first 3 digits represent the region code assigned to the PBX, and the last 3 digits represent the region code assigned to the Maintenance Console.</td>
</tr>
</tbody>
</table>
6. Main Screen

Standard Buttons and Elements
There are several standard buttons that are displayed on many screens within the Maintenance Console.

The standard buttons are as follows:

<table>
<thead>
<tr>
<th>Button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
<td>Implements changes and closes the current screen.</td>
</tr>
<tr>
<td>Cancel</td>
<td>Abandons changes and returns to the previous screen.</td>
</tr>
<tr>
<td>Close</td>
<td>Keeps any changes implemented, and closes the current screen.</td>
</tr>
<tr>
<td>Apply</td>
<td>Implements changes and remains on the same screen.</td>
</tr>
<tr>
<td>Refresh</td>
<td>Implements changes, updates displayed data, and remains on the current screen.</td>
</tr>
<tr>
<td>Help</td>
<td>Displays the relevant help topic for the current screen.</td>
</tr>
</tbody>
</table>

In addition, many screens within the software display a small open folder icon ( ) beside lists of setting items. Clicking this icon will collapse part of the list, allowing other items to be displayed. The icon will change to a closed folder ( ). Clicking the closed folder icon will expand the list again.

2.1.4 Card Status
Certain tools, utilities and settings require that the target card be set to out-of-service (OUS) or in-service (INS) status before the operation is carried out. Where required, this is noted in the description of each item. Card status changes can only be performed when the software is in Interactive mode (see 2.1.1 Starting Maintenance Console and Software Modes).

- "In service" means that the card is installed correctly in the PBX, and is capable of being used normally.
- "Out of service" means that the card is installed correctly in the PBX, but has been temporarily removed from use. This allows settings to be modified or software to be upgraded.
- "Fault" means that the card is not installed in the PBX correctly, or is not functioning correctly. For more information, see the Installation Manual.

For details about how to change the status of a card, see To change the status (INS/OUS) of a card (Interactive mode only) on screen 3.1 [1-1] Slot.

2.1.5 Display Options
The View and Window menus provide options to control the display of items within the Maintenance Console.

- View
  - Toolbar: Displays or hides the tool bar of commonly used buttons.
  - Statusbar: Displays or hides the bar at the bottom of the Maintenance Console window.
  - System Menu: Displays or hides the menu of PBX setting screens.

- Window
2.1.6 Extension Number Setting

Many screens within the Maintenance Console software allow you to select extensions as part of programming various features (for example, as members of a group). These screens use a standard window to make selecting multiple extensions easy, accessed by clicking a button. This section explains how to use this Extension Number Setting window.

To select multiple extension numbers, select the type of extension to display, highlight the extensions you wish to add, then click the Add button. When finished, click OK. Data for the selected extensions will be added to the first free spaces on the original screen.

◆ Extension Type

Selects the types of extension numbers to display in ◆ Extension Numbers & Names List. Multiple items can be selected. Items that are not available are shown with a grey checkbox.

**Default**
None selected.

**Value Range**
Wired Extension, Portable Station, VM Group(DPT), VM Group(DTMF), ICD Group, PS Ring Group, OGM(DISA), External Pager, Analog MODEM

◆ Extension Numbers & Names List

Displays all available extensions of the types selected in ◆ Extension Type, and names. Click entries to select them, and click the Add button when finished, to add the selected extensions. To deselect an entry, click it again.

**Default**
Available extensions.

**Value Range**
Matching extensions

◆ Available Column

Specifies which fields in the original form to add extension data to. For example, if both extension numbers and names can be entered in the original form, it is possible to specify that extension name data not be transferred, by deselecting that field here.
To select or deselect a field, click its name.

**Default**
First available field

**Value Range**
Available fields
Selected Extension List

Displays the extensions that have been selected to be added to member data. To remove an extension from this list, click it to select it and click **Delete**.

**Default**
Not stored.

**Value Range**
Selected extensions
2.2 Program launcher

2.2.1 Program launcher—New

Creates a new system data file, used to program the PBX in Batch mode. All settings are in their initial or default state.
This option is only available at Installer level.
To upload the file created here to the SD memory card installed in the PBX, see 2.6.2 Utility—File Transfer PC to PBX (SD Card).

Note
Since selecting this option creates a blank system data file, uploading this file to the PBX will overwrite all previous settings. Use only when necessary.

To create a new system data file
1. From the program launcher, select New.
2. Click the appropriate model number.
3. Select whether an EMEC (KX-TDA600) or MEC (KX-TDA50/KX-TDA100/KX-TDA200) card is installed or not.
4. Click OK.

2.2.2 Program launcher—Open

Opens a system data file previously saved on the PC, and enters Batch mode.

When opening a file created with an older version of the Maintenance Console, you will be asked whether you want to convert the data for use with the current version or not. Using the data without converting may result in some data being loaded to an incorrect destination, and is not recommended.

If the file is not supported by the PBX (e.g. a system data file from an incompatible PBX), it will not be opened. The only files that can be opened are files that were created by the Maintenance Console for a supported PBX. To upload a file opened here to the SD memory card installed in the PBX, see 2.6.2 Utility—File Transfer PC to PBX (SD Card).

To open a system data file
1. From the program launcher, select Open.
   The Open dialog box will be displayed.
2. Navigate to the folder containing the system data file you want to open.
3. Select the file.
4. Click Open.
   If the file was created with an older version of the Maintenance Console, you will be asked if you want to convert the data.
   • Click Yes to convert the data for use with the current version of the Maintenance Console. Enter a name for the new converted system file.
   • Click No to open the file as it is.

2.2.3 Program launcher—Connect—RS-232C

Connects to the PBX in Interactive mode through the serial RS-232C interface of the PBX.
This option allows direct entry of connection parameters, for cases where the PC is used to connect to one or just a few PBXs, and an individual profile for each PBX is not necessary. If you connect to multiple PBXs and would prefer to choose from among pre-saved profiles instead, see 2.2.7 Program launcher—Connect—Profile Setup for more details about creating profiles.

To connect to the PBX by RS-232C
1. From the program launcher, select Connect. The Login window will be displayed.
2. Select a connection option.
   • Select a Profile Name if you want to use a pre-saved profile. This option is only available when one or more profiles have been previously stored.
     a. Select the profile to use from the drop-down list.
     b. If the system password for the PBX has not been stored with the profile, enter it.
        If the system password has been stored with the selected profile, it does not need to be entered.
   • To enter the parameters manually, select the PBX Model and confirm that the RS-232C radio button is selected.
     a. Specify the settings as required. For more details, see the table below.
     b. Enter the system password for the PBX.
3. Click Connect.

Connection Settings for RS-232C

<table>
<thead>
<tr>
<th>Setting</th>
<th>Values</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port</td>
<td>COMx</td>
<td>Specify the number of the COM port assigned to the PC’s RS-232C interface. Only available COM ports are displayed.</td>
</tr>
<tr>
<td>Baud Rate (bps)</td>
<td>2400, 4800, 9600, 19200, 38400, 57600, 115200</td>
<td>Specify the speed of data transmission.</td>
</tr>
</tbody>
</table>

2.2.4 Program launcher—Connect—USB
Connects to the PBX in Interactive mode through the USB port on the PBX, or a USB port (USB Module) attached to a DPT.

To connect to the PBX by USB
1. From the program launcher, select Connect. The Login window will be displayed.
2. Select a connection option.
   • Select a Profile Name if you want to use a pre-saved profile.
     a. Select the profile to use from the drop-down list.
     b. If the system password for the PBX has not been stored with the profile, enter it.
        If the system password has been stored with the selected profile, it does not need to be entered.
   • To enter the parameters manually, select the PBX Model and confirm that the USB radio button is selected.
     a. Enter the system password for the PBX.
3. Click Connect.
2.2.5 Program launcher—Connect—LAN

Connects to the PBX in Interactive mode through the Local Area Network interface of the PBX. A CTI-LINK card (KX-TDA100/KX-TDA200/KX-TDA600) or IP-GW4 card (KX-TDA50) must be installed and the IP address of the PBX set to use this feature. For more details, see 3.30 [1-1] Slot—Card Property - CTILINK (KX-TDA100/KX-TDA200/KX-TDA600 only) and 3.19 [1-1] Slot—Card Property - IP Gateway (KX-TDA50 only).

This option allows direct entry of connection parameters, for cases where the PC is used to connect to one or just a few PBXs, and an individual profile for each PBX is not necessary. If you connect to multiple PBXs and would prefer to choose from among pre-saved profiles instead, see 2.2.7 Program launcher—Connect—Profile Setup for more details about creating profiles.

To connect to the PBX by LAN
1. From the program launcher, select Connect. The Login window will be displayed.
2. Select a connection option.
   • Select a Profile Name if you want to use a pre-saved profile.
     a. Select the profile to use from the drop-down list.
     b. If the system password for the PBX has not been stored with the profile, enter it.
     If the system password has been stored with the selected profile, it does not need to be entered.
   • To enter the parameters manually, select the PBX Model and confirm that the LAN radio button is selected.
     a. Specify the connection parameters as required. For more details, see the table below.
     b. Enter the system password for the PBX.
3. Click Connect.

Connection Settings for LAN

<table>
<thead>
<tr>
<th>Setting</th>
<th>Values</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP Address</td>
<td>1.0.0.0–223.255.255.255</td>
<td>Specify the IP address of the PBX on the LAN. Enter the same IP address that was input in IP Address of 3.30 [1-1] Slot—Card Property - CTILINK (KX-TDA100/KX-TDA200/KX-TDA600 only).</td>
</tr>
<tr>
<td>Port Number</td>
<td>10000–65535</td>
<td>Specify the port number used to access the PBX via LAN. Enter the same port number that was input in Maintenance Port Number of 3.30 [1-1] Slot—Card Property - CTILINK (KX-TDA100/KX-TDA200/KX-TDA600 only) or 3.19 [1-1] Slot—Card Property - IP Gateway (KX-TDA50 only).</td>
</tr>
</tbody>
</table>

2.2.6 Program launcher—Connect—Modem

Connects to the PBX in Interactive mode through the modem.
To access the PBX remotely using this feature, an RMT card must be installed and the ◆ Remote—Analog Remote (Modem) Floating Extension Number assigned in 13.1 [11-1] Main.

This option allows direct entry of connection parameters, for cases where the PC is used to connect to one or just a few PBXs, and an individual profile for each PBX is not necessary. If you connect to multiple PBXs and
would prefer to choose from among pre-saved profiles instead, see 2.2.7 Program launcher—Connect—Profile Setup for more details about creating profiles.

To connect to the PBX by Modem

1. From the program launcher, select Connect. The Login window will be displayed.
2. Select a connection option.
   - Select a Profile Name if you want to use a pre-saved profile.
     a. Select the profile to use from the drop-down list.
   - If the system password for the PBX has not been stored with the profile, enter it.
     If the system password has been stored with the selected profile, it does not need to be entered.
   - To enter the parameters manually, select the PBX Model and confirm that the Modem radio button is selected.
     a. Specify the settings as required. For more details, see the table below.
     b. Enter the system password for the PBX.
3. Click Connect.

Connection Settings for Modem

<table>
<thead>
<tr>
<th>Setting</th>

<td>Specify the speed of data transmission.</td>
</tr>
<tr>
<td>Modem Initialize</td>
<td>–</td>
<td>Enter the modem initialize command, and click Initialize to send the command to the modem. For more details, refer to your modem’s instruction manual.</td>
</tr>
</tbody>
</table>

2.2.7 Program launcher—Connect—Profile Setup

Profiles are useful when one PC is used to connect to multiple PBXs. Rather than manually adjusting the connection settings each time a different PBX is accessed, it is possible to store the connection settings for several PBXs. Then, when you wish to connect to a specific PBX, you can simply choose that PBX’s profile from the list.
**Note**

When reinstalling or upgrading the Maintenance Console, it is possible to create a backup of all profiles. This allows you to use the original connection settings with the new Maintenance Console.

The functions of the buttons on this screen are as follows:

<table>
<thead>
<tr>
<th>Button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profile File</td>
<td>Opens or saves profiles as separate files.</td>
</tr>
<tr>
<td>Save current profile</td>
<td>Overwrites the previous settings with the current settings when a profile already exists. A confirmation message will be displayed.</td>
</tr>
<tr>
<td>Save as new profile</td>
<td>Saves the current settings as a new profile. A <strong>Profile Name</strong> is required.</td>
</tr>
<tr>
<td>Delete profile</td>
<td>When an existing profile is selected, deletes that profile. A confirmation message will be displayed.</td>
</tr>
</tbody>
</table>
2.3 File

2.3.1 File—Close

Closes the system data file that is currently being modified, and returns to the program launcher.

To close a system data file
- From the File menu, select Close.
  If the system data file has not been saved, a warning message will be displayed, giving you the option to save the file.
  - Click Yes to save the file.
  - Click No to abandon the changes.

2.3.2 File—Save

Overwrites the previously saved system data file with the system data currently being modified in Batch mode.
To upload a file saved here to the SD memory card installed in the PBX, see 2.6.2 Utility—File Transfer PC to PBX (SD Card).

To save a system data file
- From the File menu, select Save.
  If the data has never been saved, the Save dialog box will be displayed. For more details, see 2.3.3 File—Save As.

2.3.3 File—Save As

Saves the system data file being modified in Batch mode with the name chosen by the user.
To upload a file saved here to the SD memory card installed in the PBX, see 2.6.2 Utility—File Transfer PC to PBX (SD Card).

To save a system data file with a new name
1. From the File menu, select Save As.
2. Navigate to the folder in which you want to save the file.
3. Enter a file name, or select a file to overwrite.
4. Click Save.
   If choosing to overwrite another file, a warning message will be displayed.
   - Click Yes to overwrite.
   - Click No to return to the previous screen.

2.3.4 File—Exit

Closes the Maintenance Console.

To exit the Maintenance Console
- From the File menu, select Exit.
  If the system data file being modified has not been saved, a warning message will be displayed, giving you the option to save the file.
  - Click Yes to save the file.
  - Click No to abandon the changes.
2.4 Disconnect

2.4.1 Disconnect—Disconnect

Closes the connection between the Maintenance Console and the PBX. When this option is chosen, system data is automatically backed up from the PBX to the SD memory card (see 2.5.1 Tool—SD memory backup).

To disconnect

1. From the Disconnect menu, select Disconnect.
   A confirmation message will be displayed.
2. Click Yes.
2.5 Tool

2.5.1 Tool—SD memory backup

Saves system data from the PBX to the SD memory card. Backup begins as soon as this option is chosen.

To back up system data
• From the Tool menu, select SD memory backup.

2.5.2 Tool—NDSS Link Data Clear

Clears NDSS Link Data stored in the connected PBX. While this tool clears both monitor extension and monitored extension data, it only clears it at the connected PBX. To clear this data at other PBXs in the network, it is necessary to run this tool at those PBXs.

To clear the NDSS Link Data
• From the Tool menu, select NDSS Link Data Clear.
  A confirmation screen will be displayed.
  • Click OK to clear the data.
  • Click Cancel to keep the data, and close the screen.

2.5.3 Tool—DXDP All OUS

Sets the status of all DXDP/XDP extension ports to "OUS" simultaneously.

To set all DXDP/XDP ports to OUS.
1. From the Tool menu, select DXDP All OUS.
2. Click OK.

2.5.4 Tool—Simplified Voice Message—Delete All Recording

Deletes all voice messages recorded to SVM/ESVM cards installed in the PBX.

To delete voice messages
1. From the Tool menu, point to Simplified Voice Message and select Delete All Recordings.
2. Select the card from which to delete messages.
3. Click OK.

2.5.5 Tool—Simplified Voice Message—Check Current Usage

Displays information on the voice messages stored in SVM/ESVM cards installed in the PBX. For each message, the type of message and the associated extension are displayed.

To view SVM message status
• From the Tool menu, point to Simplified Voice Message and select Check Current Usage.
2.5.6 Tool—Call Pickup for My Group

Allows you to automatically configure settings in 4.9 [2-6-2] Numbering Plan—Quick Dial and 6.4 [4-1-3] Wired Extension—Speed Dial so that users can answer calls to their Call Pickup Group by pressing "*0".

To activate this tool

• From the Tool menu, select Call Pickup for My Group.

The Group Call Pickup feature number (default: *40) + the extension user group number of the extension is assigned to first personal speed dial.

Note

This tool can only be activated if all of the following conditions are met:
– The first Quick Dial setting is empty or is already set to "*0".
– "*0" is not used for another feature number.
– The Group Call Pickup feature number has been assigned.
– The Personal Speed Dialing feature number has been assigned.

2.5.7 Tool—Extension List View

Displays a list of all programmed extension numbers and types. It is possible to sort the information according to Extension Number, Type, Extension Name, Shelf, Slot, or Port. There is also a key-word searching feature.

The types that can be displayed are as follows:

<table>
<thead>
<tr>
<th>Type</th>
<th>Detail</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intercom</td>
<td>Wired Extension</td>
</tr>
<tr>
<td>VM</td>
<td>Voice Mail</td>
</tr>
<tr>
<td>Portable Station</td>
<td>Wireless Extension (Portable Station)</td>
</tr>
<tr>
<td>ICDG</td>
<td>Incoming Call Distribution Group</td>
</tr>
<tr>
<td>WG</td>
<td>PS Ring Group</td>
</tr>
<tr>
<td>VM (DPT)</td>
<td>VM (DPT) Group</td>
</tr>
<tr>
<td>VM (DTMF)</td>
<td>VM (DTMF) Group</td>
</tr>
<tr>
<td>Pager</td>
<td>External Pager</td>
</tr>
<tr>

<td>Analog Modem</td>
</tr>
<tr>
<td>OGM (DISA)</td>
<td>DISA</td>
</tr>
<tr>
<td>DSS</td>
<td>DSS Console</td>
</tr>
<tr>
<td>DPT-I/F CS</td>
<td>PT-interface CS</td>
</tr>
<tr>
<td>SVM</td>
<td>SVM Card</td>
</tr>
</tbody>
</table>

To view extension information

• From the Tool menu, select Extension List View.
2.5.8 Tool—Import

Allows several types of system data files or tables to be imported. Except for Speed Dial and Caller ID, this option is only available at Installer level.

The files from which data can be imported are files that were previously saved at this or another PBX using the Export tool (see 2.5.9 Tool—Export), or comma-separated value (CSV) files. Unsupported file types cannot be opened.

For all tables except ARS - Routing Plan, it is possible to edit the CSV file directly using an appropriate editor, before importing.

The types of data that can be imported using this tool, and the matching destination fields, are as follows:

**Feature - Speed Dial and Caller ID**

<table>
<thead>
<tr>
<th>Data Type</th>
<th>Import Destination</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Speed Dialing Number</td>
<td>Location</td>
</tr>
<tr>
<td>Name</td>

**To import system data**

1. From the Tool menu, point to Import, and then click the type of data to import.
2. Navigate to the folder containing the system data file you want to open.
3. Select the file.
4. Click Open to open the file.
   - If applicable, a list of field names found in the imported file will be displayed.
5. For the **Feature - Speed Dial and Caller ID** table, when an EMEC (KX-TDA600) or MEC (KX-TDA50/KX-TDA100/KX-TDA200) card is installed, select the Speed Dial table to which to import the data (KX-TDA50: Basic Memory or Expanded Memory; KX-TDA100/KX-TDA200/KX-TDA600: system or tenant) from the drop-down list.
6. If required, select import fields.
   - When import fields can be selected, the selection screen is displayed automatically. Matching origin and destination fields are entered by default.
   - To change the destination for an import field, select the preferred field from the drop-down list.
   - To not import a field, select the blank option from the drop-down list.
7. Click OK to perform the import operation.
   - Depending on the type of data imported, the relevant programming screen may be displayed.
   - Click OK or Apply to complete the import operation.
   - If data in a field being imported does not match the required format for the import destination, an error message will be displayed when the import operation is attempted, and the operation will be canceled. This can occur when, for example, the destination field can only accept numeric data, but the data being imported contains alphabet characters, as the correct fields were not linked together.

**2.5.9 Tool—Export**

Allows several types of system data to be exported to files. These files can be used with the Import tool (see 2.5.8 Tool—Import) to update another PBX.

Except for **ARS - Routing Plan**, tables are exported as comma-separated value (CSV) files.

Except for Speed Dial and Caller ID, this option is only available at Installer level.
To export system data
1. From the Tool menu, point to Export, and then click the type of data to export.
2. Navigate to the folder in which you want to save the file.
3. Enter a file name.
4. Click Save.
   • When export fields are automatically selected, the file will be saved.
   • When export fields can be selected, the selection screen will be displayed automatically.
5. For the Feature - Speed Dial and Caller ID table, when an EMEC (KX-TDA600) or MEC (KX-TDA50/KX-TDA100/KX-TDA200) card is installed, select the Speed Dial table from which to export the data (KX-TDA50: Basic Memory or Expanded Memory; KX-TDA100/KX-TDA200/KX-TDA600: system or tenant) from the drop-down list.
   A list of field names that can be exported will be displayed.
6. Click the check box beside the name of each field that you want to export.
7. Click OK.

2.5.10 Tool—Screen Customize—User Level/Administrator Level

Allows you to specify which menu screens, tools and utilities can be accessed in User and Administrator levels. This option is only available at Installer level.
Selected check boxes will be displayed on the main screen of the Maintenance Console and in the menu bar to users with the level of access being edited.

To modify displayed screens
1. From the Tool menu, point to Screen Customize, and then click the access level to modify.
2. Select the items that you want to have displayed.
   • Clear the check box beside the names of items you do not want to have displayed.
   • Select the check box beside the names of items you want to have displayed.
3. Click OK.
2.6 Utility

2.6.1 Utility—Diagnosis

Performs diagnostic tests on cards installed in the PBX, to identify the source of problems. If any of the tests listed here returns the result "NG" ("No Good"), contact your dealer. Test results can be saved as a TXT-format (text) file.

When testing is complete, any cards that were set to OUS status must be returned to INS status if they are to be used again.

Card Test

Tests the relevant functions of a card to ensure that it is operating correctly. The tests carried out vary according to the type of card being tested.

The tests that are performed on each card are as follows:

### KX-TDA50

<table>
<thead>
<tr>
<th>Test Type</th>

### To perform a card test

1. From the **Utility** menu, select **Diagnosis**.
2. Click on the **Status** cell of the card to be tested, and set it to "OUS". With the KX-TDA50, to perform the EXT-CID path test, set the status of both the EXT-CID card and the card in slot 1 to "OUS".
3. Click on the cell showing the card type. A new window will be displayed.
4. Select the **Card Test** option. A new window will be displayed.
5. Click **Test** to perform the test(s). The error report will be displayed. When all tests are completed, the words "Test End!" will be shown on the last line of the output.
6. Select an option:
   - Click **Capture** if you want to save the displayed information.
     1. Enter a file name, or select a file to overwrite.
     2. Click **Save**.
   - Click **Cancel** to return to the Diagnosis screen.

### Pair Port Test (KX-TDA100/KX-TDA200/KX-TDA600 only)

Tests the combination of an extension port and CO line port to ensure that communication with the CO line port can be carried out successfully. The pair port test can be carried out using one LCOT or ELCOT card and one DHLC, SLC8, SLC16, MSLC16, ESLC16, EMSLC16, CSLC16, or ECSLC24 card.

**Note**

With the KX-TDA600, the pair of cards to be used for the pair port tests must be installed within the same shelf.

The tests that are performed are as follows:

<table>
<thead>
<tr>
<th>Test Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Line current OFF (Ext-&gt;CO)</td>
<td>Line current from extension to CO line turns off.</td>
</tr>
<tr>
<td>Line current ON (Ext-&gt;CO)</td>
<td>Line current from extension to CO line turns on.</td>
</tr>
<tr>
<td>Off hook detection (CO-&gt;Ext)</td>
<td>Off-hook generation/detection from CO line to extension</td>
</tr>
<tr>
<td>DTMF detection (CO-&gt;Ext)</td>
<td>DTMF generation/detection from CO line to extension</td>
</tr>
<tr>
<td>-------------------------</td>
<td>-----------------------------------------------</td>
</tr>
<tr>
<td>DP detection (CO-&gt;Ext)</td>
<td>DP generation/detection from CO line to extension</td>
</tr>
<tr>
<td>BELL detection (Ext-&gt;CO)</td>
<td>BELL generation/detection from extension to CO line</td>
</tr>
<tr>
<td>Speech path (Ext-&gt;CO)</td>
<td>Speech path from extension to CO line</td>
</tr>
<tr>
<td>Speech path (CO-&gt;Ext)</td>
<td>Speech path from CO line to extension</td>
</tr>
</tbody>
</table>

To perform a pair port test
1. From the Utility menu, select Diagnosis.
2. Click on the Status cell of the extension card to be tested, and set it to "OUS".
3. Click on the cell showing the card type.
   A new window will be displayed.
4. Select the Pair Port Test option.
   A new window will be displayed. The card you selected in Step 3 will be shown in the Extension Line Slot No. drop-down list.
5. From the CO Line Slot No. drop-down list, select the slot number of the CO line card you want to test.
6. From the CO Line Port No. drop-down list, select the port number of the CO line you want to test.
7. Click Test.
   The error report will be displayed.
8. Select an option:
   • Click Capture if you want to save the displayed information.
     1. Enter a file name, or select a file to overwrite.
     2. Click Save.
   • Click Cancel to return to the Diagnosis screen.

Network Loopback Test (KX-TDA100/KX-TDA200/KX-TDA600 only)
Performs a remote loopback test on the PRI23 card.

Note
• To perform this test, it is necessary to set Loopback Test started by Network in 3.14 [1-1] Slot —Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only) to "Enable".
• The version of the PRI23 card must be 2.000 or later.

To perform a network loopback test
1. From the Utility menu, select Diagnosis.
2. Click on the Status cell of the PRI23 card, and set it to "OUS".
3. Click on the cell showing the card type.
   A new window will be displayed.
4. Select the Loopback Type option.
   A new window will be displayed.
5. Select Point1 or Point2 depending on the type of loopback test you want to perform
   The available selections may vary depending on the hardware version of the card.
6. Click Apply.
   Preparation for the test is complete. The test will start automatically.
7. After the test is complete, select Release and click Apply.
8. Click Close to return to the Diagnosis screen.
### 2.6.2 Utility—File Transfer PC to PBX (SD Card)

Copies PBX system files (program files and data files) from the connected PC to the SD memory card installed in the PBX. Pre-existing files on the SD memory card are overwritten.

This option is only available at Installer level.

Two types of files can be copied using this tool:

- **Program files**: These contain the programs used to operate cards within the PBX and CSs, acting as on-board drivers.
- **Data files**: These contain the initial configuration data for individual cards and settings.

Not all files that are copied using this tool are automatically made active. To install new program files or main system data to the PBX, use the System Reset—Reset by the Command utility (see 2.6.17 Utility—System Reset—Reset by the Command) for PMPR/PSMPR/PLMPR and DSYS/DSSYS/DLSYS files, and the SD Card File View and Load utility (see 2.6.4 Utility—SD Card File View and Load) for all other files.

The PBX examines the header information of a file to determine 2 things: whether the file contains supported data, and which system component the file applies to.

Only files whose header information matches that of a system file supported by the PBX can be transferred. Attempting to transfer any other type of file results in an error message.

The names of all files that can be stored on the SD memory card are as follows:

#### Main Program

**KX-TDA50**

<table>
<thead>
<tr>
<th>Name on SD Memory Card</th>
<th>Corresponding Card</th>
</tr>
</thead>
<tbody>
<tr>
<td>PSMPR</td>
<td>MPR</td>

</tbody>
</table>
To transfer files to the SD memory card
1. From the Utility menu, select File Transfer PC to PBX (SD Card). The dialog box will be displayed.
2. Select the file to upload.
   A window showing the upload progress will be displayed.
   While transferring files to the SD memory card, the PBX automatically renames them according to the header information.
   A message will be displayed when the transfer is complete.
3. Click OK.

2.6.3 Utility—File Transfer PBX (SD Card) to PC

Copies system data files from the SD memory card installed in the PBX to the connected PC. This option is only available at Installer level.

The files that can be downloaded from the SD memory card are as follows:

<table>
<thead>
<tr>
<th>File Name</th>
<th>File Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>DSSYS (KX-TDA50)</td>
<td>System Data</td>
</tr>
<tr>
<td>DSYS (KX-TDA100/KX-TDA200)</td>
<td>System Data</td>
</tr>
<tr>
<td>DLSYS (KX-TDA600)</td>
<td>System Data</td>
</tr>
<tr>
<td>$SYSERR</td>
<td>Error Data</td>
</tr>
<tr>
<td>$SYSERR1–$SYSERR9</td>
<td>Error Data</td>
</tr>
<tr>
<td>DKEYSD (KX-TDA50)</td>
<td>Feature Access</td>
</tr>
<tr>
<td>DKEYSD (KX-TDA100/KX-TDA200)</td>
<td>Feature Access</td>
</tr>
<tr>
<td>DLKEYSD (KX-TDA600)</td>
<td>Feature Access</td>
</tr>
</tbody>
</table>

Downloading the DSYS/DSSYS/DLSYS system data file allows you to make a backup of the configuration of the PBX.
The error data files are snapshots of the configuration of the PBX taken automatically when a major error causes a system reset. They can be analyzed by your dealer to identify the source of a problem. If there is only one error data file, its name will be $SYSERR. If there is more than one file, the files will be numbered in chronological order, up to a maximum of 9 files.

To transfer files to the PC
1. From the Utility menu, select File Transfer PBX (SD Card) to PC.
2. Select the file to download from the list of files on the SD memory card.
   Only the files listed in the table above can be downloaded. Selecting any other file will cause an error message to be displayed.
3. Click Transfer.
   The Save dialog box will be displayed.
4. Navigate to the folder in which you want to save the file.
5. Enter a file name.
6. Click Save.
   - A window showing the download progress will be displayed.
   - A message will be displayed when the transfer is complete.
7. Click OK.

### 2.6.4 Utility—SD Card File View and Load

Displays a list of files on the SD memory card, and allows you to update the programs stored in LPR cards (cards with local processors) (KX-TDA100/KX-TDA200/KX-TDA600 only) and Cell Stations (CSs). This option is only available at Installer level.

To update the program stored in an LPR card (KX-TDA100/KX-TDA200/KX-TDA600 only), the card must first be set to out of service (OUS). To update the program stored in a CS (KX-T0141/KX-TDA0142), the port of the card (CSIF/DHLC/DLC) that the CS is attached to must be set to OUS, but the card itself must be set to in service (INS). Only cards that are in the correct status will be displayed.

The name, date and time of creation, and size of files are displayed.

#### To view and load files on the SD memory card
1. From the Utility menu, select SD Card File View and Load.
2. Click on the name of the desired file.
   - Only files containing program data (whose filenames start with "P") can be selected.
3. Click Detail.
   - The Detail screen will be displayed. Header information from the chosen SD memory card file is displayed on the left.
4. From the Card drop-down list on the right, select the card(s) whose software you want to update.
   - To update a specific card or port:
     - LPR cards (KX-TDA100/KX-TDA200/KX-TDA600 only): select the slot number and card name.
     - CSs (KX-T0141/KX-TDA0142): select the slot number and card name, and then select the related CS port from the drop-down list directly below.
   - To update all matching cards simultaneously:
     - Select "ALL".
5. Click View to update the displayed header information of the selected files.
   - The file with the higher File Version and File Revision numbers is newer.
6. Click Load to update the file stored on the PBX.
   - When the update is finished, a message will be displayed.
7. Click OK.
   - The display will return to the Detail screen.

### 2.6.5 Utility—SD Card File Delete

Allows you to delete files from the SD memory card. This option is only available at Installer level.

The following essential system files cannot be deleted by this utility:
- KX-TDA50: PSMPR, DSSYS, DSKEYSD
- KX-TDA100/KX-TDA200: PMPR, DSYS, DKEYSD
- KX-TDA600: PLMPR, DLSYS, DLKEYSD

#### To delete files from the SD memory card
1. From the Utility menu, select SD Card File Delete.
2. Click on the file to be deleted.
3. Click **Delete**.
   A confirmation screen will be displayed.

4. Click **OK**.
   The display will return to the **SD Card File Delete** screen.

### 2.6.6 Utility—Message File Transfer PC to PBX

Transfers Outgoing Message (OGM) files from the PC to the selected MSG/ESVM card.

This option is only available at Installer level, and requires that at least 1 MSG/ESVM card is installed. For the KX-TDA100/KX-TDA200/KX-TDA600, the OPB card that it is mounted on must be set to OUS status. For the KX-TDA50, the MSG/ESVM card must be set to OUS status.

Files are stored on the MSG/ESVM card in the location specified by the file’s header information. Uploaded files are automatically renamed as necessary. If this location already contains an OGM, it will be overwritten by the newly uploaded message.

**To transfer OGMs to an MSG/ESVM card**

1. From the **Utility** menu, select **Message File Transfer PC to PBX**.
2. Select the target MSG/ESVM card, or "ALL", from the drop-down list, and click **OK**.
   The Open dialog box will be displayed.
3. Select the message files to upload.
   It is possible to select multiple files.
4. Click **OK**.
   The files will be uploaded. Files that do not contain message data will be ignored.
   When complete, the display will return to the main screen.

### 2.6.7 Utility—Message File Transfer PBX to PC

Transfers Outgoing Message (OGM) files from the MSG/ESVM card to the PC.

This option is only available at Installer level, and requires that at least 1 MSG/ESVM card is installed. For the KX-TDA100/KX-TDA200/KX-TDA600, the OPB card that it is mounted on must be set to OUS status. For the KX-TDA50, the MSG/ESVM card must be set to OUS status.

**To transfer OGMs to the PC**

1. From the **Utility** menu, select **Message File Transfer PBX to PC**.
2. From the upper drop-down list, select the target MSG/ESVM card.
3. From the lower drop-down list, select the messages to transfer.
   • To transfer a certain message, select the number of that message.
   • To transfer all messages at once, select "ALL".
   The Save dialog box will be displayed.
4. Enter a file name.
5. Click **Save**.
6. Click **OK**.
   When you choose to transfer all messages, each message is saved as an individual file, with a number appended to the file name corresponding to that message’s location on the MSG/ESVM card.
   When complete, the display will return to the main screen.

### 2.6.8 Utility—Error Log

Collects and displays system error information.
Whenever there is a system failure, the PBX stores the error code generated. The connected PC collects all of these codes, along with other information, and displays an explanatory error message.

The functions of the buttons on this screen are as follows:

<table>
<thead>
<tr>
<th>Button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cancel</td>
<td>Closes the Error Log screen without saving.</td>
</tr>
<tr>
<td>Capture</td>
<td>Saves the currently displayed Error Log information as a text file.</td>
</tr>
<tr>
<td>Minor</td>
<td>Displays minor errors, which affect only a certain part of system operation.</td>
</tr>
<tr>
<td>Major</td>
<td>Displays major errors, which affect operation of the whole system, or result in system failure.</td>
</tr>
<tr>
<td>Clear</td>
<td>Erases the stored error log information from both the screen and the PBX.</td>
</tr>
<tr>
<td>Log Information</td>
<td>Displays probable causes of the errors and their solutions.</td>
</tr>
</tbody>
</table>

The items displayed on screen are as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Index</td>
<td>The ordinal number assigned to an error record in the current log.</td>
</tr>
<tr>
<td>Date</td>
<td>The date of the error detection.</td>
</tr>
<tr>
<td>Time</td>
<td>The time of the error detection.</td>
</tr>
<tr>
<td>Error Code</td>
<td>The 3-digit error code assigned by the PBX.</td>
</tr>
</tbody>
</table>
### Item Description

<table>
<thead>
<tr>
<th>Sub Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>The 5-digit sub code of the relevant hardware. (XYYZZ)</td>
<td></td>

### Error Message

A description of the error.

---

**To view the error log**

- From the **Utility** menu, select **Error Log**.

---

### 2.6.9 Utility—T1 Signaling Bit Monitor (KX-TDA100/KX-TDA200/KX-TDA600 only)

Displays reference signaling bit information for all channels of the T1 card, by monitoring sent and received A, B, C and D bits. This utility is intended for use by dealers.

This option is only available at Installer level, and requires that the target T1 card be set to INS status.

While monitoring is being performed, any displayed bits whose value changes from 0 to 1 or vice versa will be highlighted in red until the next screen refresh is performed.

**To view signaling bit information**

1. From the **Utility** menu, select **T1 Signaling Bit Monitor**.
2. From the **Slot No** drop-down list, select the target slot.
3. From the **Interval Timer** drop-down list, select the number of seconds between each automatic screen refresh.
4. Click **Start**.
   - Monitoring will be performed and the screen will refresh according to the interval specified.
5. Click **Stop** to end monitoring.
   - To refresh the screen at any time while monitoring is stopped, click **Refresh**.
2.6.10 Utility—T1 Line Trace (KX-TDA100/KX-TDA200/KX-TDA600 only)

Traces the sent and received signaling bits and dial numbers on the specified channel of the T1 line. This utility is intended for use by dealers. This option is only available at Installer level, and requires that the target T1 card be set to INS status.

To view T1 trace data
1. From the Utility menu, select T1 Line Trace.
2. From the Slot No drop-down list, select the target slot.
3. From the CH No drop-down list, select the target channel.
4. Click Start.
   Trace information will be displayed. The information is automatically updated whenever the data being monitored changes.
5. Click Stop to end the trace.
6. Select an option:
   • Click Capture to save the displayed trace information.
     Information is saved as a text-format file.
   • Click Clear to erase the information.

2.6.11 Utility—ISDN/QSIG Protocol Trace

This utility collects protocol trace data from PRI or IP-GW cards, and displays it on the PC. This option is only available at Installer level, and requires that the target PRI or IP-GW card be set to INS status.

Protocol trace data is continually accumulated on ISDN and IP-GW cards, and 3 types of data can be downloaded:
• Real Time Trace (not available when connecting via LAN): Pseudo-real-time data is collected through data polling at one-second intervals. The displayed information is updated beginning when the Start button is clicked.
• Accumulation Trace: Previously accumulated data is retrieved and displayed.
• Error Accumulation Trace: Previously accumulated error data is retrieved and displayed. This trace shows the data snapshot that is taken just before a card resets.

To view trace data
1. From the Utility menu, select ISDN/QSIG Protocol Trace.
2. From the Slot No drop-down list, select the target slot.
3. From the Trace Data Type drop-down list, select the type of data to view.
4. Click Start.
   Trace information will be displayed.
5. Select an option:
   • Click Capture to save the displayed trace information.
   • Click Clear to clear the screen display.
6. Click Cancel to return to the main screen.

2.6.12 Utility—Digital Trunk Error Report (KX-TDA100/KX-TDA200/KX-TDA600 only)

Displays accumulated information on various types of errors occurring on digital CO lines.
This option is only available at Installer level. The value displayed for each error item is the number of times that each error occurred during the time period selected. Average values for these items vary depending upon many factors, such as the equipment being used, and the distance from the telephone company.

The displayed items are as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time</td>
<td>Time of error</td>
</tr>
<tr>
<td>Slot</td>
<td>Relevant slot and card type</td>
</tr>
<tr>
<td>Counter of Digital Trunk Error Logs logged in &quot;Minor Error&quot; Log</td>
<td></td>
</tr>
<tr>
<td>Out of SYNC (#300)</td>
<td>Digital CO line out of sync (Loss of Signal)</td>
</tr>
<tr>
<td>RAI (#301)</td>
<td>Digital CO line RAI signal reception</td>
</tr>
<tr>
<td>AIS (#302)</td>
<td>Digital CO line Alarm Indication Signal reception</td>
</tr>
<tr>
<td>Frame Failure (#300)</td>
<td>Digital CO line frame failure (Loss of Frame)</td>
</tr>
<tr>
<td>Counter of minor communication error</td>
<td></td>
</tr>
<tr>
<td>CRC</td>
<td>Cyclic Redundancy Check error</td>
</tr>
<tr>
<td>SF</td>
<td>Severely errored frame (or Severe Framing Error)</td>
</tr>
<tr>
<td>FE</td>
<td>Frame synchronization bit-error</td>
</tr>
<tr>
<td>LV</td>
<td>Line Code Violation</td>
</tr>
<tr>
<td>SL</td>
<td>Controlled slip</td>
</tr>
</tbody>
</table>

To view digital CO line information
1. From the Utility menu, select Digital Trunk Error Report.
2. From the Slot No drop-down list, select the target slot.
   • To generate a report on a specific card, select the slot number and card name.
   • To generate a report on all matching cards simultaneously, select "ALL".
3. From the Display form drop-down list, select the time period to view.
4. Click Execute.
   The error report will be displayed.

2.6.13 Utility—IP Extension Statistical Information
Displays accumulated statistical information on both IP extensions and IP-EXT cards.

The displayed items are as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Collection Started Time</td>
<td>Date and time the port was last reset.</td>
</tr>
<tr>
<td>Port No.</td>
<td>Number of the port.</td>
</tr>
<tr>
<td>RTP Receive Packet Counter</td>
<td>Total number of packets received.</td>
</tr>
<tr>
<td>RTP Receive Lost Packet Counter</td>
<td>Total number of packets lost.</td>
</tr>
</tbody>
</table>
To view IP extension information

1. From the Utility menu, select IP Extension Statistical Information.
2. From the Card Selection drop-down list, select the slot number.
3. Click Execute. The statistical information will be displayed.
4. Select an option:
   - Click Capture if you want to save the displayed information.
     1. Enter a file name, or select a file to overwrite.
     2. Click Save.
   - Click Clear to erase the information and reset the Collection Started Time.
5. Click Cancel to return to the main screen.

2.6.14 Utility—CS Information

Displays information stored by the PBX regarding each Cell Station (CS). This option is only available at Installer level, and requires that the target CSIF, DHLC or DLC card be set to INS status.

For DHLC/DLC cards, only the information for ports that have CSs connected to them is displayed.

The displayed items are as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shelf-Slot</td>
<td>Number of the slot (for KX-TDA600, shelf and slot)</td>
</tr>
<tr>
<td>Port</td>
<td>Number of the port</td>
</tr>
<tr>
<td>CS Name</td>
<td>Name of the attached CS</td>
</tr>
<tr>
<td>Status</td>
<td>Service status of the attached CS: INS, OUS, or FAULT. If the status is FAULT, subsequent data items for that port will be left blank.</td>
</tr>
<tr>
<td>Version</td>
<td>Version number of the program file stored in the CS</td>
</tr>
<tr>
<td>Revision</td>
<td>Revision number of the program file stored in the CS</td>
</tr>
<tr>
<td>CSID</td>
<td>12-digit ID number of the CS</td>
</tr>
<tr>
<td>Path</td>
<td>Number of the wireless extension currently using each path. In the case of a group, several extensions may be using the same floating extension number. When an extension number is not registered, the display shows “OFF”. The number of paths that can be used varies for each CS model. For more details, see the documentation for your CS.</td>
</tr>
</tbody>
</table>
To view CS information
1. From the Utility menu, select CS Information.
2. From the Target CSI/F Slot No. drop-down list, select the target slot.
   • To display information on a single card, select the slot number and name of that card.
   • To display information on all matching cards, select "ALL".
3. From the Interval Timer drop-down list, select the number of seconds between each automatic screen refresh.
4. If you want to save the CS information, click Capture.
   a. Create a file for saving the data.
   b. Click Start.
   c. Click Close.
5. Click Start to begin monitoring.
   Monitoring will be performed and the screen will refresh according to the interval specified.
   To refresh the screen manually at any time, click Refresh.
6. Click Stop to end monitoring.
7. If you started to save the CS information in step 4, click Capture, then click Stop to record the information to the specified file.
8. Click Close to return to the main screen.

2.6.15 Utility—PS Information
Displays Portable Station (PS) registration information, including the associated Cell Station (CS).
This option is only available at Installer level.

The displayed items are as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PS No.</td>
<td>PS location number. Only registered PSs will be displayed.</td>
</tr>
<tr>
<td>Extension Number</td>
<td>Extension number of the PS.</td>
</tr>
<tr>
<td>Location—Slot</td>
<td>Slot number of the CS that the PS is registered with.</td>
</tr>
<tr>
<td>Location—Port</td>
<td>Port number of the CS that the PS is registered with.</td>
</tr>
</tbody>
</table>

To view PS information
1. From the Utility menu, select PS Information.
2. Click Refresh.
2.6.16 Utility—Timed Update (KX-TDA100/KX-TDA200/KX-TDA600 only)

Updates programs in the LPR cards (optional service cards with local processors) by comparing them with files found on the SD memory card on a preset schedule, and downloading newer files to the cards. This option is only available at Installer level.

It is recommended to set the timed update to take place during the least active time period, for example late at night.

Cards are automatically set to OUS status during an update, and returned to INS status when the update is complete.

This utility does not apply to CS programs. These must be updated manually using the SD Card File View and Load utility (see 2.6.4 Utility—SD Card File View and Load).

When this utility has been set, all commands that would affect the status of cards are prevented from operating. The list of these commands is as follows:

- Card status change (INS/OUS)
- Diagnosis commands
- Card installation
- Card deletion
- Remote reset
- LPR program download requests
- Signaling Bit Monitor requests (T1)
- Line trace start requests (T1)
- ISDN/QSIG Protocol Data Trace start requests
- Time setting
- CS program download requests
- File deletion

When a function other than those listed above, that cannot be performed while Timed Update has been set, is selected, an error message will be displayed.

To turn this utility on:
1. From the Utility menu, select Timed Update.
2. Select the Set option.
3. Enter the desired time using the number keys.
   - Click in the hour or minute field and use the up and down arrows to adjust the displayed time in increments of one unit.
4. Click Apply.
   - A message box will be displayed.
5. Click Yes.

To turn this utility off:
1. From the Utility menu, select Timed Update.
2. Select the Off (Cancel) option.
3. Click Apply.
   - A message box will be displayed.
4. Click Yes.
2.6.17 Utility—System Reset—Reset by the Command

Updates the main system program and data files stored within the PBX using files taken from the SD memory card, and resets the connected PBX.

This option is only available at Installer level.

2 copies of each of the main system files can be stored on the SD memory card. The names of these files are as follows:

**KX-TDA50**

<table>
<thead>
<tr>
<th>File Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DSSYS</td>
<td>Main system data file. Contains all of the current configuration data for the PBX.</td>
</tr>
<tr>
<td>DSSYS_S</td>
<td>Backup main system data file</td>
</tr>
<tr>
<td>PSMPR</td>
<td>PBX program file. Contains the software to run the MPR board of the PBX.</td>
</tr>
<tr>
<td>PSMPR_S</td>
<td>Backup PBX program file</td>
</tr>
</tbody>
</table>

**KX-TDA100/KX-TDA200**

<table>
<thead>
<tr>
<th>File Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DSYS</td>
<td>Main system data file. Contains all of the current configuration data for the PBX.</td>
</tr>
<tr>
<td>DSYS_SUB</td>
<td>Backup main system data file</td>
</tr>
<tr>
<td>PMPR</td>
<td>PBX program file. Contains the software to run the MPR board of the PBX.</td>
</tr>
<tr>
<td>PMPR_SUB</td>
<td>Backup PBX program file</td>
</tr>
</tbody>
</table>

**KX-TDA600**

<table>
<thead>
<tr>
<th>File Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DLSYS</td>
<td>Main system data file. Contains all of the current configuration data for the PBX.</td>
</tr>
<tr>
<td>DLSYS_S</td>
<td>Backup main system data file</td>
</tr>
<tr>
<td>PLMPR</td>
<td>PBX program file. Contains the software to run the EMPR board of the PBX.</td>
</tr>
<tr>
<td>PLMPR_S</td>
<td>Backup PBX program file</td>
</tr>
</tbody>
</table>

When new DSYS/DSSYS/DLSYS and PMPR/PSMPR/PLMPR files are transferred from a connected PC to the SD memory card using the File Transfer PC to PBX (SD Card) utility (see 2.6.2 Utility—File Transfer PC to PBX (SD Card)), they are stored as the backup files. To use these files on the PBX, it is necessary to first swap them with the currently active files on the SD memory card.

**Requirements**

- This utility only functions on PBXs version 1.005 and later.
- On earlier versions, the reset request confirmation screen will be displayed, and files will not be updated.
To update system files and reset the PBX

1. From the Utility menu, point to System Reset and then click Reset by the Command.

2. Choose whether to back up current system data or not.
   • Click SD Backup to back up the current system data to the SD memory card before proceeding.
     Select this if you intend to use the current system data unchanged after reset.
   • Click Skip to continue without backing up.
     Select this if you intend to replace the current system data with data that was uploaded from the PC.
     The second screen will be displayed. A list of matching files found on the SD memory card, with dates and
times, is shown at the top.

3. Select whether to replace the DSYS/DSSYS/DLSYS and PMPR/PSMPR/PLMPR files or not.
   When no backup file is found, the corresponding options are not available.

4. Click OK.
   A confirmation screen will be displayed.

5. Select an option:
   • Click OK to reset the PBX.
     If OK is clicked, a final confirmation screen will be displayed.
   • Click Cancel to return to the main screen without copying files.

6. Click OK to reset the PBX, or Cancel to return to the main screen without copying files.
   If the reset command was not carried out correctly, an error message will be displayed, and you will be
   returned to the main screen.

After resetting the PBX with this command, it is necessary to reconnect to the PBX to continue programming.

2.6.18 Utility—Flash ROM ID Information

Displays the Flash ROM ID number pre-assigned to the PBX, used for PBX installation management.

To view the Flash ROM ID

• From the Utility menu, click Flash ROM ID Information.
2.7 Help

2.7.1 Frequently Asked Questions (FAQ)

This section provides answers to some common questions about using the Maintenance Console software to program the PBX. The information is divided into the following topics:

<table>
<thead>
<tr>
<th>Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connection</td>
<td>Connecting to the PBX using Maintenance Console.</td>
</tr>
<tr>
<td>Maintenance Console Software</td>
<td>Using the Maintenance Console software.</td>
</tr>
<tr>
<td>Card Status</td>
<td>Changing the status (INS/OUS) of cards.</td>
</tr>
<tr>
<td>Portable Stations</td>
<td>Setting up portable stations, including registration and deregistration.</td>
</tr>
<tr>
<td>Numbering</td>
<td>Changing the numbering plan for the PBX, or numbers of individual extensions or features.</td>
</tr>
<tr>
<td>Saving Modified Data</td>
<td>Safely saving PBX data edited with Maintenance Console.</td>
</tr>
<tr>
<td>Setting Features</td>
<td>Setting up individual features.</td>
</tr>
</tbody>
</table>

Connection

Q The Maintenance Console cannot connect to the PBX via RS-232C cable.
A • Is the cable firmly connected to both the PC and the PBX?
• Is the serial port that the PC uses correctly specified?
• Is the baud rate correct?
  The default setting, and a safe rate, is 19 200 bps.
• Is the password correct?
• Is the Maintenance Console not connected to the PBX by another connection method?

Q The Maintenance Console cannot connect to the PBX via USB.
A • Is the USB cable firmly connected to both the PC and the PBX?
• Is the USB driver on the PC running?
  To confirm, open the Windows Device Manager, and look for "Panasonic KX-TDA USB Main Unit driver" in the USB Controllers section. If it is not present, re-install the USB driver.
• Is the password correct?
• Is the Maintenance Console not connected to the PBX by another connection method?

Q The Maintenance Console cannot connect to the PBX via LAN.
A • Is the PC connected to the LAN?
• Have the IP address and port number of the PBX been set correctly? For more details, see 3.30 [1-1] Slot—Card Property - CTILINK (KX-TDA100/KX-TDA200/KX-TDA600 only).
• Is the password correct?
• Is the Maintenance Console not connected to the PBX by another connection method?
The Maintenance Console cannot connect to the PBX via modem.

- Is the dial number of the modem correct? For more details, see 13.1 [11-1] Main.
- Has a modem been installed to the PBX?
- Is the password correct?
- Is the Maintenance Console not connected to the PBX by another connection method?

Can I perform initial setup of the PBX without being connected to the PBX?

- Yes. This is possible in Batch mode.
  Create a new system data file using 2.2.1 Program launcher—New, edit settings as required, and then upload this file to the PBX later (see 2.6.2 Utility—File Transfer PC to PBX (SD Card)).

Maintenance Console Software

How do I confirm the software version of the PBX or installed cards?

- From 3.1 [1-1] Slot, click Summary. Summary information, including software versions, is displayed for all cards installed in the PBX.

Not all of the characters of a setting can be displayed because the column is too narrow.

- Move the mouse to the line between the names of 2 setting items, at the top of the table.
  The pointer will change to a double arrow. Click and drag the line to the right until all characters are displayed.

Card Status

The status of a new card will not change to "INS".

- With the new card installed, does the total number of extensions or CO lines exceed the maximum supported by the PBX?
- Is the type of card installed in the slot different from the card type set as "Pre-Install" for that slot? Confirm that the correct card is installed in the slot.
- Is the card firmly and fully installed in the slot? Confirm that the card is installed correctly in the slot.
- Confirm that the card is not damaged.

I want to set the status of only 1 port of the IP-GW4 card to "OUS".

- This cannot be done, since the IP-GW4 card requires both channels of a port to be set to "OUS"/"INS" together.

I cannot change an LCO port to INS status.
A
• Is the card installed in the appropriate slot?
• Is the card installed in the correct slot, but not functioning correctly?
  Check the condition of the card.
• Is the card itself in INS status?
  Set it to INS status.
• Is a CO line connected to the appropriate port?
• Is the port in FAULT status, even though a CO line is connected?
  Run diagnosis on the relevant slot.

Q How do I prevent newly installed cards automatically being changed to "INS"?
A • Change ◆ New Card Installation—Card Status for any Card in 3.35 [1-3]
  Option from "In Service (INS)" to "Out of Service (OUS)".

### Portable Stations

Q I cannot register Portable Stations using the method described in Portable Station [1-2].
A • Is the status of the CSIF, DHLC or DLC card set to "INS"?
• Is a CS connected to the CSIF, DHLC or DLC card? If not, connect one.
• Do the PINs (Personal Identification Numbers) of the PBX and the Portable Station match? Confirm that they are the same.
• Is the Portable Station within transmission range of the CS?
• Has the Portable Station previously been registered at another location?
  It is not possible to register a Portable Station at 2 locations, so use the ◆ Forced
  De-registration option to delete the previous registration.

Q I cannot delete the extension number of a Portable Station.
A • First, de-register the Portable Station itself, and then delete the extension number.

Q I cannot de-register a Portable Station.
A • Is the Portable Station turned on? If not, turn it on.
• Is the Portable Station within transmission range of the CS? If not, move it closer to
  the CS and try the de-registration operation again.

Q The Portable Station I want to de-register is broken, and will not turn on, or is not
  available, or the registration information was deleted first from the Portable Station,
  so it cannot be de-registered.
A • The Portable Station can be forcibly de-registered by following the procedure shown
  in ◆ Forced De-registration of 3.34 [1-2] Portable Station.

Q I changed the extension number of a Portable Station, but the display of the Portable
  Station still shows the old extension number.
A • Turn the Portable Station off and back on again, to force it to re-register its location.

Q I changed the FCO of a Portable Station, but the display of the Portable Station still
  shows the old FCO.
A • Turn the Portable Station off and back on again, to force it to re-register its location.
Q If I delete the extension number of a Portable Station, and then turn the Portable Station off and back on again, it does not function correctly.

A • Do not delete the extension number of the Portable Station, as this information is necessary for it to operate.

Numbering

Q How do I change the extension number of a wired extension?

A • Change the extension number of the target port to the new number, and click Apply. Next, set the port to OUS status, and then back to INS status.

Q I changed the extension number of a wired extension while the extension was engaged in a call, but the display still shows the previous extension number.

A • The extension number will not change while the extension is in use. When the conversation is finished, set the port to OUS status, and then back to INS status.

Q How do I change the extension numbering plan from 3-digit numbers to 4-digit numbers?

A • Perform the following steps:
   1. Open the 4.8 [2-6-1] Numbering Plan—Main screen.
   2. Enter a 2-digit number in Leading Number, or change No. of Additional Digits from "x" to "xx".
      For more details, see What is the procedure to modify the Numbering Plan? in Numbering.

Q How do I set a 3-digit numbering plan?

A • There are 2 methods of creating a 3-digit numbering plan, using 4.8 [2-6-1] Numbering Plan—Main:
   1. Set the leading number to be 2 digits, with one additional digit. This method allows a maximum of 10 extensions.
      Example:  Leading Number = 10;  No. of Additional Digits = x
      In this example, extension numbers 100 to 109 can be used.
   2. Set the leading number to be one digit, with 2 additional digits. This method allows a maximum of 100 extensions.
      Example:  Leading Number = 1;  No. of Additional Digits = xx
      In this example, extension numbers 100 to 199 can be used.
      For more details, see What is the procedure to modify the Numbering Plan? in Numbering.

Q What is the procedure to modify the Numbering Plan?
Perform the following steps:

1. Confirm that the Numbering Plan you will change is not currently being used by any extensions (see 2.5.7 Tool—Extension List View).
   If it is being used by extensions, temporarily change the extension numbers of those extensions to that of another numbering plan, or delete the extension number (see 6.1 [4-1-1] Wired Extension—Extension Settings and 6.10 [4-2-1] Portable Station—Extension Settings).
2. Clear the Leading Number cell.
3. Click Apply.
4. Modify the No. of Additional Digits cell as required.
5. Click Apply.
6. Enter the desired value in the Leading Number cell.
7. Click Apply.
8. Set all extension ports to OUS status.
9. On the relevant screens, set the extension numbers of extensions to the desired values.
10. Set all extension ports back to INS status.

Q When modifying the Numbering Plan, I cannot change the Leading Number.
A • It is not possible to use the same Leading Number for 2 extension blocks, or to use a number that could possibly overlap with another Leading Number.
   So, for example, if "2" is already set as a Leading Number it is not possible to set "21" as another Leading Number because of the possible overlap of extension numbers.
   The number you are trying to store cannot be used if it is already being used by:
   • A feature number
   • Another extension block
   • A Dial setting (see 11.1 [9-1] TIE Table)
   • Quick Dialing (see 4.9 [2-6-2] Numbering Plan—Quick Dial)
   In any of these cases, choose another number.

Q When modifying the Numbering Plan, how do I set a 1-digit extension number?
A • Perform the following steps:
   1. Clear the Leading Number cell.
   2. Click Apply.
   3. Set No. of Additional Digits to "None".
   4. Click Apply.
   5. Enter the desired value in the Leading Number cell.
   6. Click Apply.
   7. Set all extension ports to OUS status.
   8. On the relevant screens, set the extension numbers of extensions to the desired values.
   9. Set all extension ports back to INS status.

Q How do I change a feature number?
A • Perform the following steps:
   1. Open the 4.8 [2-6-1] Numbering Plan—Main screen.
   2. Change the value in the Dial cell of the desired feature.
   3. Click Apply.
Q I cannot change a feature number.
A • It is not possible to use the same number for 2 items.
   The number you are trying to store cannot be used if it is already being used by:
   • A feature number
   • An extension
   • A Dial setting (see 11.1 [9-1] TIE Table)
   • Quick Dialing (see 4.9 [2-6-2] Numbering Plan—Quick Dial)
   In any of these cases, choose another number.

Q How do I change the code used to access another PBX?
A • Perform the following steps:
   1. Open the 4.8 [2-6-1] Numbering Plan—Main screen.
   2. Select the Other PBX Extension tab.
   3. Change the value in the Dial cell of the desired feature.
   4. Click Apply.

Q I cannot change an Other PBX Extension code.
A • It is not possible to use the same number for 2 items.
   The number you are trying to store cannot be used if it is already being used by:
   • A feature number
   • An extension
   • A Dial setting (see 11.1 [9-1] TIE Table)
   • Quick Dialing (see 4.9 [2-6-2] Numbering Plan—Quick Dial)
   In any of these cases, choose another number.

Q I cannot change a feature number on the B/NA DND Call Feature screen.
A • The number you are trying to store is already being used by another call feature.
   Please choose a different number.

Q How do I prevent extension numbers being automatically assigned to a newly installed card?

Saving Modified Data
Q Modified settings have not been updated in the PBX.
A • Click Apply or OK in the sub-menu screen.

Q Modified settings are not saved even when I press the Apply button.
A • To save the system data files, choose Save from the File menu.

Q If I reset the PBX directly after modifying settings, the modified settings are not updated in the PBX.
When you click **Apply**, the settings are updated in the PBX, but are not yet saved to the SD memory card. If system data is not saved to the SD memory card, the PBX will restore the data that was last saved to the card in the event that the PBX is reset, or power is turned off and back on again. Therefore, before resetting the PBX, click the **SD memory backup** icon to save the system data to the SD memory card. Alternatively, exit the Maintenance Console. This automatically saves system data to the SD memory card.

**Note**
Do not remove the SD memory card while power is supplied to the PBX. Doing so may cause the PBX to fail to start when you try to restart the system.

**Q** After reinitializing the PBX, I restored system data from a previous backup. However, some of the settings have not been restored to their previous values.

**A**

- The following setting data is not saved to the SD memory card, so will be deleted when the PBX is initialized. This data is stored in the PBX’s battery backup memory.
  - Incoming Call Log
  - Outgoing Call Log (including Last Number Redial)
  - Message Waiting

- SVM Log and messages (both greeting messages and voice messages left by callers) recorded in an SVM/ESVM card
Setting Features

Q How do I change the dialing mode of an analog CO line?

A • From the 3.11 [1-1] Slot—Port Property - LCO Port screen, change the ◆ Dialing Mode setting of the target port to "DTMF" or "Pulse", as required.

Q How do I set disconnect detection (CPC Detection) for an analog CO line?

A • From the 3.11 [1-1] Slot—Port Property - LCO Port screen, modify the ◆ CPC Signal Detection Time—Outgoing, Incoming setting of the target port. The required value varies by carrier. Transmission and reception can be set separately.

Q How do I connect to another PBX using QSIG?

A • From the 3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/ KX-TDA600 only) screen, set the ◆ Port Type of the port you want to use to either "QSIG-Slave" or "QSIG-Master".

Q How do I change the type of an extension port?

A • Set the port to OUS status. Then, change ◆ DPT Type—Type in the 3.5 [1-1] Slot—Port Property - Extension Port window.

Q I have set the type of an extension port to "DSS Console", but I cannot apply this setting. (Error E000402)

A • The number entered in ◆ DPT Type—Location No. on the 3.5 [1-1] Slot—Port Property - Extension Port screen is the same as that entered for another DSS Console. Change this so that the numbers do not overlap.

Q I have set the type of an extension port to "VM (DPT)", but I cannot apply this setting. (Error E000403)

A • The ◆ DPT Type—VM Unit No. and ◆ DPT Type—VM Port No. settings entered on the 3.5 [1-1] Slot—Port Property - Extension Port screen are the same as those entered for another VM (DPT). Change this so that the numbers do not overlap.

Q I have set the type of an extension port to "PC Console", but I cannot apply this setting. (Error E000402)

A • The number entered in ◆ DPT Type—Location No. on the 3.5 [1-1] Slot—Port Property - Extension Port screen is the same as that entered for another PC Console. Change this so that the numbers do not overlap.

Q What programming do I have to perform to use a headset with an extension?

A • Set ◆ Headset OFF/ON on the 3.5 [1-1] Slot—Port Property - Extension Port screen to "Headset ON".

Q What programming do I have to perform to use XDP with an extension port?

A • Set ◆ XDP Mode on the 3.5 [1-1] Slot—Port Property - Extension Port screen to "On".
Q How do I edit a Class of Service, or create a new Class of Service?
A • Class of Service feature restrictions can be set from the 4.11 [2-7-1] Class of Service—COS Settings screen.

Q How do I restrict calls between 2 extensions?
A • Calls between extensions can be restricted from the 4.13 [2-7-3] Class of Service—Internal Call Block screen. Click in the relevant cells to select the COS levels whose extensions are blocked from calling each other.

Q How do I restrict CO line calls made by extensions?
A • CO line calls made by extensions can be restricted from the 4.12 [2-7-2] Class of Service—External Call Block screen. Click in the relevant cells to select the CO line groups that cannot be used by extensions associated with a particular COS in each time mode. To prevent extensions associated with a COS from making CO line calls, set all trunk groups for that COS to "Block" (blue).

Q How do I modify the hold operation for SLTs?
A • It is possible to choose how to hold a line and transfer a call with an SLT using the SLT—SLT Hold Mode option on the 4.17 [2-9] System Options screen. For more details, see "3.1.2 Call Hold" of the Feature Manual.

Q How do I set up an Incoming Call Distribution (ICD) group to receive CO line calls directly?
A • Perform the following steps:
  1. On the 5.12 [3-5-1] Incoming Call Distribution Group—Group Settings screen, enter the floating extension number you chose for the ICD group in the ◆ Floating Extension Number cell.
  2. Click Apply.
  3. On the 5.13 [3-5-1] Incoming Call Distribution Group—Group Settings—Member List screen, select the ICD group you created from the Incoming Call Distribution drop-down list.
  4. Enter the extension numbers of member extensions in the ◆ Extension Number column.
  5. Click Apply.
  6. On the DIL tab of the 12.2 [10-2] DIL Table & Port Settings screen, enter the floating extension number of the ICD group as the ◆ DIL Destination—Day, Lunch, Break, Night of each time mode.
  7. Modify other settings as required from the Group—Incoming Call Distribution Group submenu.

Q How do I set the queuing operation for an Incoming Call Distribution group?
A • Perform the following steps:
  1. On the 5.14 [3-5-2] Incoming Call Distribution Group—Queuing Time Table screen, set the actions as required for each queuing table.
  2. On the 5.12 [3-5-1] Incoming Call Distribution Group—Group Settings screen, from the Queuing Time Table tab, select the number of the Queuing Time Table to use in each time mode.
Q How do I add an extension as a member of an Incoming Call Distribution (ICD) group?

A 
- Perform the following steps:
  1. On the 5.13 [3-5-1] Incoming Call Distribution Group—Group Settings—
     Member List screen, from the Incoming Call Distribution drop-down list, select
     the group you want to modify.
     The ICD group must have an extension number set.
  2. Enter the extension number of the extension you want to add in a blank cell of the
     ◆ Extension Number column.
  3. Set ◆ Delayed Ring as necessary.
  4. Click Apply.
Note that it is necessary to set the extension number of the ICD group in advance.

Q I cannot set system speed dialing numbers from PC Console.

A 
- Set the COS of the extension to which PC Console is connected to Manager class, by
  setting ◆ Manager on the Extension Feature tab of the 4.11 [2-7-1] Class of
  Service—COS Settings screen to “Enable”.
- System speed dialing numbers can only be edited by one PC Console at a time.

Q I have set FWD through system programming, but calls are still not being forwarded.

A 
- Perform the following steps:
  1. Check that the ◆ Call from CO—Present Button Status or ◆ Call from
     Extension—Present Button Status of the target extension on the 6.3 [4-1-2]
     Wired Extension—FWD/DND or 6.12 [4-2-2] Portable Station—FWD/DND
     screen is set to “FWD”.
  2. Create a FWD button on the target extension if one does not already exist.
  3. Press the FWD button so that it changes to FWD status.
3.1 [1-1] Slot

The operating characteristics associated with each service card can be programmed. Move the mouse pointer over an installed card to display the menu of options for that card. To view a summary of status and MPR versions for all cards installed in the PBX, click the Summary button (see 3.2 [1-1] Slot —Summary).

To install a new card to the PBX
1. Click on the name of the card to install in the list on the right. An image of the card will be displayed to the left of the list, and information about the card will be shown below.
2. Click and drag the image of the card to the free slot it is to be installed in, and release it. The card will move into the slot space.
3. Click Yes to confirm.

To install a new shelf to the PBX (KX-TDA600 only)
1. Move the mouse pointer over the first greyed PBX image at the bottom of the screen. Pre-Install will be shown under the mouse pointer.
2. Click Pre-Install.
3. Click Yes to confirm.

To select a different shelf of the PBX (KX-TDA600 only)
1. Move the mouse pointer over the white PBX image at the bottom of the screen you wish to select. Select Shelf will be shown under the mouse pointer.
2. Click Select Shelf.

To access card properties
1. Move the mouse pointer over a card. A menu will be shown under the mouse pointer.
2. Select Card Property. The property screen for that card will be displayed.

To access port properties
1. Move the mouse pointer over a card. A menu will be shown under the mouse pointer.
2. Select Port Property. The property screen for that card’s port or ports will be displayed.

To remove a card from the PBX
1. Move the mouse pointer over the card to remove. A menu will be shown under the mouse pointer.
2. Select Delete.
3. Click Yes to confirm. The card will be removed.
To change the status (INS/OUS) of a card (Interactive mode only)

1. Move the mouse pointer over the card.
   A menu will be shown under the mouse pointer.
2. Select the desired status:
   • Click **INS** to set the card to in-service status.
   • Click **OUS** to set the card to out-of-service status.

To install an option card on an OPB3 card

1. Move the mouse pointer over the card.
   A menu will be shown under the mouse pointer.
2. Select **Option Card**.
   The **OPB3 Option Card Setup** screen will be displayed. See 3.29 [1-1] Slot—OPB3 Option Card Setup (KX-TDA100/KX-TDA200/KX-TDA600 only).

3.1.7 Call Splitting

◆ Flash Timing - Min.
Specifies the minimum length that a signal sent from an SLT must be for the PBX to recognize it as a hookswitch flash signal.

Default
112 ms

Value Range
8 × n (n=3–63) ms
**Flash Timing - Range**

Specifies the maximum length that a signal sent from an SLT can be for the PBX to recognize it as a hookswitch flash signal.

**Default**

904 ms

**Value Range**

$8 \times n$ (n=3–191) ms

**DTMF-R STD Detection Time**

Specifies the minimum length that a DTMF tone must be for the PBX to recognize it as a DTMF tone.

**Default**

30 ms

**Value Range**

$2 \times n$ (n=1–31) ms
Feature Manual References
None

◆ SLT Power Supply (KX-TDA100/KX-TDA200/KX-TDA600 only)
Selects the voltage that enables an SLT to activate the Message Waiting lamp. This setting is only available with MSLC/EMSLC cards.

Default
85 V

Value Range
85 V, 145 V

Maintenance Console Location

5.1.7 Extension Port Configuration

◆ Connection
Indicates the port status (reference only).
This column offers two ways to open the screen to select the port command as follows:
• Click the desired cell in the column.
• Select the desired cell in the column, and then click Command.

Default
Current status

Value Range
INS: The port is in service.
OUS: The port is out of service.
Fault: The port is not communicating with the PBX.

Maintenance Console Location
3.5 [1-1] Slot—Port Property - Extension Port

Programming Manual References
3.6 [1-1] Slot—Port Property - Extension Port—Connection Command
Extension Number

Specifies the extension number of the port.
To change the extension number of a wired extension, follow the steps below:
1. Type the new extension number, then click Apply.
2. Set the status of the extension port to "OUS", then "INS".

When changing the extension number, make sure that the extension port is not in use. If the extension number is changed while the port is in use, the new extension number will not come into effect.

Extension numbers of PSs can be a maximum of 4 digits.

Default

For KX-TDA50/KX-TDA100/KX-TDA200:
Starting at 101

For KX-TDA600:
Starting at 1001
(For port 01 of the first extension card that is installed. Extension numbers are preset for subsequent extensions by adding one to the previous extension number.)

Value Range

Max. 5 digits (consisting of 0–9)

Maintenance Console Location

3.5 [1-1] Slot—Port Property - Extension Port

Programming Manual References

3.6 [1-1] Slot—Port Property - Extension Port—Connection Command

Feature Manual References

None

Extension Name

Specifies the extension name of the port.

Default

Not stored.

Value Range

Max. 20 characters

Maintenance Console Location

3.5 [1-1] Slot—Port Property - Extension Port
XDP Mode

Turns XDP mode on or off for the port. This setting is only available when Port Type on this screen is set to S-Hybrid.

Default
Off

Value Range
On: XDP enabled (The main telephone and sub telephone have different extension numbers. This is called XDP Mode.)
Off: XDP disabled (The main telephone and sub telephone both have the main telephone’s extension number. This is called Parallel Mode.)

Parallel Telephone Ringing

Specifies whether the sub telephone (SLT) rings at the same time as the main telephone (DPT) for an incoming call. This setting is only available when Port Type on this screen is set to S-Hybrid.

Default
Yes

Value Range
Yes, No
13.1.2 Paralleled Telephone

**DPT Type—Type**

Selects the port type.
To change the port type of an extension port, follow the steps below:

1. Set the status of the extension port to "OUS".
2. Change the port type of the extension port, then click **Apply**.
3. Set the status of the extension port to "INS".

When changing the port type of an extension port for which **Wireless XDP** has been set on the

6.1 [4-1-1] Wired Extension—Extension Settings screen, the **Wireless XDP** setting must be deleted first.

When changing the type of a port for which one or more SDN buttons are set (except when changing between PC Console and Telephone), all SDN buttons customized for that device will be deleted. When you attempt to apply the new settings, a warning message is displayed showing the slot and port number for which SDN buttons will be deleted. If you do not wish to delete SDN buttons for this port, click **Cancel**.

**Default**

Normal

**Value Range**

Normal: For connecting a DPT
DSS: For connecting a DSS Console (A maximum of 4 [with the KX-TDA50], 8 [with the KX-TDA100/ KX-TDA200] or 64 [with the KX-TDA600] DSS Consoles can be connected to the PBX.)
VM (DPT): For connecting a Panasonic VPS through DPT Integration
PC Console: For connecting a PC Console (A maximum of 2 [with the KX-TDA50] or 8 [with the KX-TDA100/ KX-TDA200/KX-TDA600] PC Consoles can be connected to the PBX.)

3.10 [1-1] Slot—Card Property - LCO type

The properties of the analog CO line cards can be specified.

◆ Outgoing Guard Time

Specifies the length of time after a CO line is disconnected, during which the PBX cannot seize the line.

**Default**
3 s

**Value Range**
3–6 s

**Maintenance Console Location**
3.10 [1-1] Slot—Card Property - LCO type

**Programming Manual References**
None

**Feature Manual References**
None

◆ First Dial Timer (CO)

Specifies the minimum time that the PBX waits after seizing a CO line, before sending the dialed digits to the telephone company. This allows the telephone company to have enough time to accept the dialed digits correctly.

**Default**
1.0 s

**Value Range**
0.5 \times n (n=1–16) s

**Maintenance Console Location**
3.10 [1-1] Slot—Card Property - LCO type

**Programming Manual References**
None

**Feature Manual References**
None
**CO Feed Back Tone**

Specifies whether the pulse feedback tone is turned on or not. For outgoing CO line calls, audible tones can be heard as the dialed number is sent out, which informs the extension user that the number has been dialed.

**Default**
Yes

**Value Range**
No, Yes

**Maintenance Console Location**
3.10 [1-1] Slot—Card Property - LCO type

**Programming Manual References**
None

**Feature Manual References**

**Bell Detection—Bell Start Detection Timer**

Specifies the minimum length of a bell signal that can be recognized by the PBX as the bell signal sent from the telephone company, before the PBX detects an arriving call.

**Default**
144 ms

**Value Range**
24 × n (n=1–50) ms

**Maintenance Console Location**
3.10 [1-1] Slot—Card Property - LCO type

**Programming Manual References**
None

**Feature Manual References**
None

**Bell Detection—Bell Off Detection Timer**

Specifies the duration of the bell off detection timer. If the PBX receives no bell signal from the telephone company for the length of time specified here, the PBX treats the call as lost.

**Default**
6.0 s
Pulse / DTMF Dial—DTMF Inter-digit Pause

Specifies the length of the DTMF inter-digit pause. This allows the telephone company to have enough time to accept the dialed digits correctly.

Default
112 ms

Value Range
64 + 16 × n (n=0–11) ms

Pulse / DTMF Dial—Pulse Inter-digit Pause

Specifies the length of the pulse inter-digit pause. This allows the telephone company to have enough time to accept the dialed digits correctly.

Default
830 ms

Value Range
630 ms, 830 ms, 1030 ms
Low Speed Pulse Dial—Pulse % Break

Specifies the % break for a low speed pulse dial. This is the ratio between the break (on-hook) signal and make (off-hook) signal in a pulse dial.

Default
60 %

Value Range
Other, 60 %, 67 %

Low Speed Pulse Dial—Break Width

Specifies the maximum length of the break signal in a low speed pulse dial. Low Speed Pulse Dial—Pulse % Break on this screen determines the value that can be specified here.

Default
60 ms

Value Range
4 × n (n=6–20) ms
Low Speed Pulse Dial—Make Width

Specifies the minimum length of the make signal in a low speed pulse dial. 

Default
40 ms

Value Range
$4 \times n \ (n=3–15)$ ms

Maintenance Console Location
3.10 [1-1] Slot—Card Property - LCO type

**Default**
80 ms
**Value Range**
None, $80 \times n \ (n=1-15) \ ms$

**Maintenance Console Location**
3.10 [1-1] Slot—Card Property - LCO type

**Programming Manual References**
None

**Feature Manual References**
3.1.1 Caller ID

◆ **Caller ID—Caller ID (FSK) Detection Timer**

Specifies the total time required by the PBX to detect Caller ID information. To enable this setting, ◆ **Caller ID—Caller ID Signaling** on this screen should be set to **FSK**.

**Default**
2000 ms

**Value Range**
$80 \times n \ (n=13-50) \ ms$

**Maintenance Console Location**
3.10 [1-1] Slot—Card Property - LCO type

**Programming Manual References**
None

**Feature Manual References**
3.1.1 Caller ID
3.11 [1-1] Slot—Port Property - LCO Port

Various settings can be programmed for each analog CO line port. To change the status of ports, click Command.

◆ Shelf (KX-TDA600 only)
Indicates the shelf position (reference only).

Default
Current shelf number

Value Range
Shelf number

Maintenance Console Location
3.11 [1-1] Slot—Port Property - LCO Port

Programming Manual References
None

Feature Manual References
None

◆ Slot
Indicates the slot position (reference only).

Default
Current slot number

Value Range
Slot number

Maintenance Console Location
3.11 [1-1] Slot—Port Property - LCO Port

Programming Manual References
None

Feature Manual References
None

◆ Port
Indicates the port number (reference only).
Default
Current port number

Value Range
Port number

Maintenance Console Location
3.11 [1-1] Slot—Port Property - LCO Port

Programming Manual References
None

Feature Manual References
None

Connection
Indicates the port status (reference only). This column offers two ways to open the screen to select the port command:
- Click the desired cell in the column.
- Select the desired cell in the column, and then click Command.

Default
Current status

Value Range
INS: The port is in service.
OUS: The port is out of service.

Maintenance Console Location
3.11 [1-1] Slot—Port Property - LCO Port

Programming Manual References
3.12 [1-1] Slot—Port Property - LCO Port—Connection Command

Feature Manual References
None

Dialing Mode
Selects the type of signal used to dial out to the analog CO line.

Default
DTMF
Value Range
DTMF, Pulse

Maintenance Console Location
3.11 [1-1] Slot—Port Property - LCO Port

Programming Manual References
None

Feature Manual References
4.1.2 Dial Mode Selection

◆ CPC Signal Detection Time—Outgoing, Incoming

Specifies the length of time required by the PBX to detect a CPC signal on outgoing or incoming CO line calls before disconnecting the line. When **None** is selected here, the line will not be disconnected when a CPC signal is not detected.

**Default**
400 ms

**Value Range**
None, 6.5 ms, 8 × n (n=1–112) ms

Maintenance Console Location
3.11 [1-1] Slot—Port Property - LCO Port

Programming Manual References
None

Feature Manual References
3.1.21 CPC (Calling Party Control) Signal Detection

◆ DTMF Width

Selects the length of the DTMF tone sent to the analog CO line.

**Default**
80 ms

**Value Range**
80 ms, 160 ms
**Maintenance Console Location**
3.11 [1-1] Slot—Port Property - LCO Port

**Programming Manual References**
None

**Feature Manual References**
None

**Pulse Speed**
Selects the speed at which pulse dials are sent to the analog CO line.

**Default**
Low

**Value Range**
Low, High

**Maintenance Console Location**
3.11 [1-1] Slot—Port Property - LCO Port

**Programming Manual References**
None

**Feature Manual References**
None

**Reverse Detection (KX-TDA100/KX-TDA200/KX-TDA600 only)**
Selects the type of CO line call for which the reverse signal from the telephone company is detected.

**Default**
Disable

**Value Range**
Disable: For no CO line call
Outgoing: For outgoing CO line calls only
Both Call: For both outgoing and incoming CO line calls

**Maintenance Console Location**
3.11 [1-1] Slot—Port Property - LCO Port

**Programming Manual References**
None
Feature Manual References
None

◆ Caller ID Detection
Enables the PBX to detect a Caller ID signal from the analog CO line.

Default
Enable

Value Range
Disable, Enable

Maintenance Console Location
3.11 [1-1] Slot—Port Property - LCO Port

Programming Manual References
3.10 [1-1] Slot—Card Property - LCO type

Feature Manual References
3.1.1 Caller ID

◆ Paytone Detection (KX-TDA100/KX-TDA200/KX-TDA600 only)
Enables the PBX to receive a pay tone signal from the telephone company.

Default
Disable

Value Range
Disable, Enable

Maintenance Console Location
3.11 [1-1] Slot—Port Property - LCO Port

None

Feature Manual References
None

◆ Pause Time
Specifies the length of a pause.
1.5 s

**Value Range**
1.5 s, 2.5 s, 3.5 s, 4.5 s

**Maintenance Console Location**
3.11 [1-1] Slot—Port Property - LCO Port

**Programming Manual References**
None

**Feature Manual References**
13.1.4 Pause Insertion
8.1.5 Host PBX Access Code (Access Code to the Telephone Company from a Host PBX)
16.1.2 Special Carrier Access Code

**Flash Time**
Specifies the length of a flash signal.

**Default**
608 ms

**Value Range**
None, 16 × n (n=1–255) ms

**Disconnect Time**
Specifies the length of time after a CO line is disconnected, during which the PBX cannot seize the line.

**Default**
1.5 s

**Value Range**
0.5 s, 1.5 s, 2.0 s, 4.0 s, 12.0 s
Maintenance Console Location
3.11 [1-1] Slot—Port Property - LCO Port

Programming Manual References
None

Feature Manual References
6.1.2 Flash/Recall/Terminate
3.12 [1-1] Slot—Port Property - LCO Port—Connection Command

Commands for the LCO ports can be programmed.

◆ INS

Puts the port in service.

**Default**
Not applicable.

**Value Range**
Not applicable.

**Maintenance Console Location**
3.12 [1-1] Slot—Port Property - LCO Port—Connection Command

**Programming Manual References**
3.11 [1-1] Slot—Port Property - LCO Port

**Feature Manual References**

3.13 [1-1] Slot—Card Property - PRI type (KX-TDA100/KX-TDA200/KX-TDA600 only)

The properties of the PRI card can be specified.

- **ISDN CO / QSIG Master / QSIG Slave—T200**
  Specifies the maximum time that the PBX waits for a reply after sending the L2 command to ISDN.

  - **Default**
    10 × 100 ms
  - **Value Range**
    0–600 × 100 ms

  **Maintenance Console Location**
  3.13 [1-1] Slot—Card Property - PRI type (KX-TDA100/KX-TDA200/KX-TDA600 only)

- **ISDN CO / QSIG Master / QSIG Slave—T202**
  Specifies the maximum time that the PBX waits for a reply after resending the request to use an ISDN line as a TIE line.

  - **Default**
    20 × 100 ms
  - **Value Range**
    0–600 × 100 ms

  **Maintenance Console Location**
  3.13 [1-1] Slot—Card Property - PRI type (KX-TDA100/KX-TDA200/KX-TDA600 only)

**ISDN CO / QSIG Master / QSIG Slave—T318**
Specifies the maximum time that the PBX waits for a reply after sending the Resume message.

Default
0 × 100 ms

Value Range
0–600 × 100 ms

Maintenance Console Location
3.13  [1-1] Slot—Card Property - PRI type (KX-TDA100/KX-TDA200/KX-TDA600 only)
**ISDN CO / QSIG Master / QSIG Slave—T319**

Specifies the maximum time that the PBX waits for a reply after sending the Suspend message.

**Default**

0 × 100 ms

**Value Range**

0–600 × 100 ms

**Maintenance Console Location**

3.13 [1-1] Slot—Card Property - PRI type (KX-TDA100/KX-TDA200/KX-TDA600 only)

---

**ISDN CO / QSIG Master / QSIG Slave—T322**

Specifies the maximum time that the PBX waits for a reply after sending the Status enquiry message.

**Default**

40 × 100 ms

**Value Range**

0–600 × 100 ms

**Maintenance Console Location**

3.13 [1-1] Slot—Card Property - PRI type (KX-TDA100/KX-TDA200/KX-TDA600 only)
ISDN CO / QSIG Master / QSIG Slave—T3D3

Specifies the length of time that the PBX tries to establish L2 in "Permanent" mode.

**Default**
100 × 100 ms

**Value Range**
0–3000 × 100 ms

**Maintenance Console Location**

Port
Indicates the port number (reference only).

Default
Current port number

Value Range
Port number

Maintenance Console Location
3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)

Programming Manual References
None

Feature Manual References
None

Port Type
Selects the port type.

Note
- Each ISDN connection in a QSIG network must have a master port on one PBX and a slave port on another PBX.
- ISDN extensions can belong to an incoming call distribution group or idle extension hunting group. In this case, an MSN can be assigned.

Default
CO

Value Range
CO: For connecting to public network
Extension: For connecting to extension
QSIG-Slave: For connecting to private network (slave port)
QSIG-Master: For connecting to private network (master port)

Maintenance Console Location
3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)

Programming Manual References
None

Feature Manual References
9.1.16 ISDN (INTEGRATED SERVICES DIGITAL NETWORK) FEATURES
13.1.18 PRIVATE NETWORK FEATURES—QSIG
◆ Connection
Indicates the port status (reference only).
This column offers two ways to open the screen to select the port command:
• Click the desired cell in the column.
• Select the desired cell in the column, and then click Command.

Default
Current status

Value Range
INS: The port is in service.
OUS: The port is out of service.
Fault: The port is not communicating with the network.

Maintenance Console Location
3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)

Programming Manual References
3.15 [1-1] Slot—Port Property - PRI Port—Connection Command (KX-TDA100/KX-TDA200/KX-TDA600 only)

Feature Manual References
None

◆ Status Message
Specifies whether the Status Message is sent to the network.

Default
No Transmission

Value Range
No Transmission: Status Message is not sent.
When error detection (Mandatory): Send the Status Message when an error (Mandatory) is detected.
When error detection (Option / Mandatory): Send the Status Message when an error (Option or Mandatory) is detected.

Maintenance Console Location
3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)

Programming Manual References
None

Feature Manual References
None
◆ Status Receive
Selects what happens to a call when the Status Message from the network does not match the actual status of the call.

**Default**
Ignore

**Value Range**
Ignore: Ignore the Status Message from the network.
Disconnect: Disconnect the call.

◆ Line Coding
Selects the line coding type of the PRI PCM (Pulse Code Modulation) for the port.

**Default**
B8ZS

**Value Range**
B8ZS, AMI

◆ Frame Sequence
Selects the type of frame sequence for the port.

**Default**
Extend Multi frame (ESF)
Value Range
Extend Multi frame (ESF), 4-Frame Multi frame (F4), 12-Frame Multi frame (F12)

Maintenance Console Location
3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)

◆ Port

Indicates the port number (reference only).

Default

Current port number

Value Range

Port number

Maintenance Console Location

3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)

Programming Manual References

None

Feature Manual References

None

◆ Port Type

Selects the port type.

Note

- Each ISDN connection in a QSIG network must have a master port on one PBX and a slave port on another PBX.
- ISDN extensions can belong to an incoming call distribution group or idle extension hunting group. In this case, an MSN can be assigned.

Default

CO

Value Range

CO: For connecting to public network
Extension: For connecting to extension
QSIG-Slave: For connecting to private network (slave port)
QSIG-Master: For connecting to private network (master port)
Maintenance Console Location

3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)

Feature Manual References

None

◆ Connection

Indicates the port status (reference only).
This column offers two ways to open the screen to select the port command:
• Click the desired cell in the column.
• Select the desired cell in the column, and then click Command.

Default
Current status

Value Range
INS: The port is in service.
OUS: The port is out of service.
Fault: The port is not communicating with the network.

Maintenance Console Location

3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)

Programming Manual References
None

Feature Manual References
3.1.13 CLIP (Calling Line Identification Presentation)

◆ Ringback Tone to Outside Caller
Enables the PBX to send a ringback tone to an outside caller when the network cannot send the tone.

Default
Enable

Value Range
Disable, Enable

Maintenance Console Location
3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)

Programming Manual References
None

Feature Manual References
None

◆ ISDN In/Out Call Type
Selects the method used to send dialed digits to the network.

Default
CO port: En-bloc
QSIG (slave/master) port: Overlap

Value Range
En-bloc: The PBX sends all of the dialed digits at once after the extension user completes dialing. The PBX recognizes the end of dialing when (1) # is dialed, if programmed, (2) a preprogrammed telephone number is dialed, or (3) the inter-digit timer expires.
Overlap: The PBX sends dialed digits one at a time.

Maintenance Console Location

◆ Pulse Dial—Pulse Type
Selects the type of pulse dial transmission appropriate to your area.

Default
Normal

Value Range
Normal, Sweden, New Zealand
Pulse Dial—Pulse Inter-digit Pause

Specifies the length of the pulse inter-digit pause. This allows the telephone company to have enough time to accept the dialed digits correctly.

Default
830 ms

Value Range
630 ms, 830 ms, 1030 ms

Pulse Dial—CO Feed Back Tone

Specifies whether the pulse feedback tone is turned on or not. For outgoing CO line calls, audible tones can be heard as the dialed number is sent out, which informs the extension user that the number has been dialed.

Default
Yes

Value Range
No, Yes
Feature Manual References
None

Pulse Dial—Maximum BREAK Width
Specifies the maximum length of the break signal in a pulse dial.

Default
112 ms

Value Range
8 × n (n=9–20) ms

Maintenance Console Location
3.16 [1-1] Slot—Card Property - T1 type (KX-TDA100/KX-TDA200/KX-TDA600 only)

◆ DTMF Width

Selects the length of the DTMF tone sent to the T1 channel.

Default
80 ms

Value Range
80 ms, 160 ms

Maintenance Console Location
3.17 [1-1] Slot—Port Property - T1 Port (KX-TDA100/KX-TDA200/KX-TDA600 only)
**CO Pulse Speed**

Selects the speed at which pulse dials are sent to the T1 channel.

**Default**

10 pulse/s

**Value Range**

10 pulse/s, 20 pulse/s

**Wink Signal Time Out**

Specifies the length of time that the PBX waits to receive a wink signal after seizing a CO line. If a wink signal is not received before this timer expires, the CO line is released.

**Default**

1024 ms

**Value Range**

64 × n (n=1–128) ms
◆ Start Signal Type
Selects the type of the start signal.

Default
Wink

Value Range
Immediate: Sends the dialed digits to the CO line when the First Dial Timer expires.
Wink: Sends the dialed digits to the CO line when the wink signal is received.

◆ Keep Alive Time Out

Specifies the length of time that the PBX will continue to consider an IP-PT to be active even if it receives no transmissions from that IP-PT. The PBX constantly confirms the status of IP-PTs. If no communications are received from an IP-PT for the duration specified here, the PBX considers the IP-PT to be unreachable, and sets the port status to Fault.

During operation, set between 10 s and 60 s. Settings over 60 s, and Disable, are used for debugging purposes, and IP-PTs cannot be guaranteed to function normally in these circumstances. Do not use debugging settings unless instructed to do so.

Default
10 s

Value Range
Disable, 10–120 s

3.24 [1-1] Slot—Port Property - IP-Extension Port

Various settings can be programmed for each IP extension port.
To change the status of extension ports, click **Command**.

**IP-PT Registration and De-registration**

An IP-PT must be registered to the PBX by programming both the PBX and IP-PT before it can be used. Programming instructions of the PBX are given below. It is possible to de-register the IP-PT later.

◆ **Preparation**

Follow the steps below to prepare before registering an IP-PT.
1. Open **3.22 [1-1] Slot—Card Property - IP Extension**, and confirm that the IP address and subnet mask settings of the IP-EXT card are correct.
2. Open **3.23 [1-1] Slot—Card Property - IP Extension—Common Settings** and set the gateway address.

◆ **Registration**

Follow the steps below to register the IP-PT.
1. Connect the IP-PT to be registered to the network and, if necessary, the power supply.
2. Click **Registration**.
   A dialog box will appear. Non-registered (available) extension numbers are displayed on the left.
3. Highlight numbers and click the right arrow to select them for registration. Click **Next**.
   A screen will appear with information on the current IP-PT extension number and index number for programming.
4. Program the relevant IP-PT.
5. Click **Next**.
   • If the registration is still in process, the dialog box will show "Waiting for IP-PT to register...". Click **OK**.
   • If the registration is successful, the dialog box will show "Registration Succeed".
   If there are more IP-PTs to be registered, click **Continue** to resume or **Cancel** to terminate the registration. If not, click **Close**.
   Once the IP-PT is successfully registered, the status of the IP-PT will update to show "Registered".

◆ **De-registration**

Follow the steps below to de-register the IP-PT.
1. Click **De-registration**.
   A dialog box will appear. Registered extension numbers are displayed on the left.
2. Highlight numbers and click the right arrow to select them for de-registration. Click **Next**.
   A dialog box will appear.
3. Click **Confirm**.
   • If the de-registration is successful, the dialog box will show "De-registration Succeed".
   • If the de-registration is unsuccessful, the dialog box will show "De-registration Error". De-registration will be terminated.
4. Click **Close**.
   If the IP-PT is successfully de-registered, the status of the IP-PT will update to show "None".
Forced De-registration

Follow the steps below to forcibly de-register the IP-PT when normal de-registration has been unsuccessful or IP address settings have been changed or deleted only on the IP-PT.

1. Click Forced De-registration.
   A dialog box will appear. Registered extension numbers are displayed on the left.

2. Highlight numbers and click the right arrow to select them for forced de-registration. Click Next.
   A dialog box will appear.

3. Click OK.
   A dialog box will appear.

4. Click Confirm.
   If the de-registration is successful, the dialog box will show "Forced De-registration Succeed".

5. Click Close.
   Once the IP-PT is successfully de-registered, the status of the IP-PT will update to show "None".

Shelf (KX-TDA600 only)

Indicates the shelf position (reference only).

Default
Current shelf number

Value Range
Shelf number

Maintenance Console Location
3.24  [1-1] Slot—Port Property - IP-Extension Port

Programming Manual References
None

Feature Manual References
None

Slot

Indicates the slot position (reference only).

Default
Current slot number

Value Range
Slot number

Maintenance Console Location
3.24  [1-1] Slot—Port Property - IP-Extension Port
Programming Manual References
None

Feature Manual References
9.1.15 IP-PT (IP Proprietary Telephone)

◆ Port
Indicates the port number (reference only).

Default
Current port number

Value Range
Port number

Maintenance Console Location
3.24 [1-1] Slot—Port Property - IP-Extension Port

Programming Manual References
None

Feature Manual References
9.1.15 IP-PT (IP Proprietary Telephone)

◆ Extension Number
Specifies the extension number of the port.
To change the extension number of an extension, follow the steps below:
1. Type the new extension number, then click Apply.
2. Set the status of the extension port to "OUS", then "INS".
When changing the extension number, make sure that the extension port is not in use. If the extension number is changed while the port is in use, the new extension number will not come into effect.

Default
For KX-TDA100/KX-TDA200:
Starting at 101

For KX-TDA600:
Starting at 1001
(For port 01 of the first extension card that is installed. Extension numbers are preset for subsequent extensions by adding one to the previous extension number.)

Value Range
Max. 5 digits (consisting of 0–9)

3.34 [1-2] Portable Station

Various portable station (PS) settings can be programmed. A maximum of 28 (with the KX-TDA50), 128 (with the KX-TDA100/KX-TDA200), 256 (with the KX-TDA600) or 512 (with the KX-TDA600 with EMEC card installed) PSs can be registered. Information on 32 PSs is displayed at a time. To display other PSs, click the applicable tab.

PS Registration and De-registration

A PS must be registered to the PBX by programming both the PBX and PS before it can be used. Programming instructions of the PBX are given below; programming instructions of the PS are found in the Installation Manual.

It is possible to de-register the PS later.

◆ Registration

Follow the steps below to register the PS.

1. Click Registration.
   A dialog box will appear. Non-registered (available) extension numbers are displayed on the left.

2. Highlight numbers and click the right arrow to select them for registration. Click Next.
   A screen will appear with information on the current PS extension number and index number for programming.

3. Click Next.
   • If the PS registration is still in progress, the dialog box will show "Waiting for portable station to register...". Click OK.
   • If the registration is successful, the dialog box will show "Registration Succeed".
     If there are more PSs to be registered, click Continue to resume or Cancel to terminate the registration.
     If not, click Close.

Once a PS is successfully registered, the status of the PS will update to show "Registered".

◆ De-registration

Follow the steps below to de-register the PS.

1. Click De-registration.
   A dialog box will appear. Registered extension numbers are displayed on the left.

2. Highlight numbers and click the right arrow to select them for de-registration. Click Next.
   A dialog box will appear.

3. Click Confirm.
   • If the de-registration is successful, the dialog box will show "De-registration Succeed".
   • If the de-registration is unsuccessful, the dialog box will show "De-registration Error". De-registration will be terminated.

4. Click Close.
   If the PS is successfully de-registered, the status of the PS will update to show "None".

◆ Forced De-registration

Follow the steps below to forcibly de-register the PS when normal de-registration has been unsuccessful or de-registration has been performed only on the PS.

1. Click Forced De-registration.
   A dialog box will appear. Registered extension numbers are displayed on the left.

2. Highlight numbers and click the right arrow to select them for forced de-registration. Click Next.
   A dialog box will appear.
3. Click **OK**.  
A dialog box will appear.

4. Click **Confirm**.  
If the de-registration is successful, the dialog box will show "Forced De-registration Succeed".

5. Click **Close**.  
Once the PS is successfully de-registered, the status of the PS will update to show "None".

◆ **Personal Identification Number**

Specifies the Personal Identification Number (PIN) of the PBX, used to avoid registering a PS to the wrong PBX.  
Note that the same PIN should be entered at the PS, before the PS is registered to the PBX.

**Default**
1234

**Value Range**
4 digits (consisting of 0–9)

Feature Manual References
13.1.24 PS (Portable Station)

◆ Extension No.
Specifies the extension number of the PS.
In Wireless XDP Parallel Mode, the PS can be used as a sub telephone with a wired main telephone (PT/SLT), and two of them will share one extension number of the main telephone. However, note that the PS extension number specified here will not be altered by the extension number of the main telephone even if the PS is in Wireless XDP Parallel Mode.

System options can be programmed. It is possible to clear the master CS information (Master CS Port and Radio System ID) by following the procedure below in batch mode:

1. Click **Clear Master CS**.
2. Click **Yes**. To abort the procedure, click **No**.

If the system data is downloaded to the PBX after the master CS information has been cleared, it is necessary to register all PSs again in the interactive mode. Master CS information will be assigned automatically when a CS is connected to the PBX. Without the Radio System ID, PSs cannot be registered.

**System Wireless—System ID**

Indicates the radio system ID used to register a PS (reference only).

**Default**

Not stored.

**Value Range**

Not applicable.

New Card Installation—ISDN Standard Mode for PRI23 Card (KX-TDA100/KX-TDA200/KX-TDA600 only)

Specifies whether a PRI23 card is automatically set to ISDN Standard mode or T1-LCOT mode when it is installed for the first time.

Default
ISDN Standard mode

Value Range
ISDN Standard mode: The CCBS, CF, CT, and Centralized VM features are supported. DIL and DID call distribution are available for the D channel.
T1-LCOT mode: DIL and DID call distribution are available for all 23B channels. The CCBS, CF, CT, and Centralized VM features are not available in this mode.

3.36 [1-4] Clock Priority (KX-TDA100/KX-TDA200/KX-TDA600)

◆ Slot Number (KX-TDA100/KX-TDA200), Shelf-Slot Number (KX-TDA600)

Selects and prioritizes slot numbers for the PRI and T1 cards that are used to forward a clock pulse from an external source to the PBX.

Obtain the master clock time from the outside line that the telephone company provides.

To change Clock Priority, follow the steps below:
1. Assign a Clock Priority to each PRI and/or T1 card.
2. Set the status of the present clock source card to "OUS", then "INS".

Note

If multiple PBXs are used to establish a private network (TIE line service, QSIG network, etc.) without being connected through the telephone company, assign only one PBX as the clock source on the network. That PBX should have a card connected to a telephone company line selected as its clock source. All other PBXs should have cards connected to the network selected as the clock source. This enables all PBXs on the network to synchronize their timing.

Default

None

Value Range

None, PRI23, T1

3.1.8 Call Transfer

**Recall—Call Park Recall**

Specifies the length of time that a parked call waits to be retrieved, before the Transfer Recall destination assigned to the extension that parked the call hears a Call Park Recall ring.

**Default**

60 s

**Value Range**

1–240 s
Recall—Disconnect after Recall

Specifies the length of time after an extension with a CO line call on hold receives a Hold Recall tone that the held call is disconnected.

Default

30 min

Value Range

1–30 min

Tone Length—Busy Tone / DND Tone

Specifies the length of time that a busy/DND tone is heard when a call is made to an extension in busy status or DND mode. A reorder tone will be sent when this timer expires. (For a call through DISA, the call will be disconnected when this timer expires.)

Default

10 s

Value Range

0 (continuous)–15 s
Tone Length—Reorder Tone for PT Handset

Specifies the length of time that a reorder tone is heard when using a PT handset. The PT will return to idle status when this timer expires.

4.1.11 Doorphone Call

◆ **Doorphone—Open Duration**
Specifies the length of time that a door stays unlocked after being opened from an extension.

**Default**
5 s

**Value Range**
2–7 s

**Maintenance Console Location**
4.4 [2-3] Timers & Counters

**Programming Manual References**
7.1 [5-1] Doorphone

**Feature Manual References**
4.1.10 Door Open

◆ **Timed Reminder—Repeat Counter**
Specifies the number of times that an alarm is repeated.

**Default**
3

**Value Range**
1–15
Timed Reminder—Interval Time
Specifies the length of time between the repeated alarms.

Default
30 s

Value Range
10 × n (n=1–120) s

Timed Reminder—Alarm Ringing Duration
Specifies the length of time that an alarm rings.

Default
30 s

Value Range
10 × n (n=1–30) s
Unattended Conference—Recall Start Timer

Specifies the length of time until the conference originator receives an Unattended Conference Recall tone.

**Default**
10 min

**Value Range**
0–60 min

**Maintenance Console Location**
4.4 [2-3] Timers & Counters

**Feature Manual References**
17.1.4 Timed Reminder

**Programming Manual References**
None

Unattended Conference—Warning Tone Start Timer

Specifies the length of time until the parties involved in an Unattended Conference receive a warning tone after the conference originator receives the Unattended Conference Recall tone but does not return to the conference.

**Default**
30 s

**Value Range**
0–240 s

**Maintenance Console Location**
4.4 [2-3] Timers & Counters

**Programming Manual References**
None

**Feature Manual References**
3.1.16 Conference
Unattended Conference—Disconnect Timer

 Specifies the length of time until an Unattended Conference is disconnected after the parties involved in the conference receive a warning tone but the conference originator does not return to the conference.

 Default
 15 s

 Value Range
 0–240 s

 Maintenance Console Location
 4.4 [2-3] Timers & Counters

 Programming Manual References
 None

 Feature Manual References
 3.1.16 Conference

Miscellaneous

 Caller ID—Waiting to receive

 Specifies the length of time that the PBX waits to receive Caller ID from an analog CO line. If the Caller ID is received through an analog CO line card on which no Caller ID card is mounted or through a port to which Caller ID Detection is disabled, this timer is not applicable.

 Default
 5 s

 Value Range
 0–15 s

 Maintenance Console Location
 4.4 [2-3] Timers & Counters

 Programming Manual References
 8.1 [6-1] System Speed Dial
 5.3 [3-1-3] Caller ID Modification

 Feature Manual References
 3.1.1 Caller ID
◆ Caller ID—Visual Caller ID Display

Specifies the length of time that a Caller ID number, with the Call Waiting tone offered by an analog line from the telephone company, is shown on the display. The Caller ID number flashes on the display for five seconds, followed by a 10-second pause, then flashes again for five seconds.

Default
30 s

Value Range
0–250 s

Maintenance Console Location
4.4 [2-3] Timers & Counters

Programming Manual References
None

Feature Manual References
3.1.1 Caller ID
3.1.9 CALL WAITING FEATURES
3.1.10 Call Waiting Tone

◆ Extension PIN—Lock Counter

Specifies the number of successive incorrect PIN entries allowed before the extension PIN is locked. A locked extension PIN can not be used until reset from the extension assigned as manager. (Specifying "None" disables this counter.)

Default
None

Value Range
None, 1–15

Maintenance Console Location
4.4 [2-3] Timers & Counters

Programming Manual References
None

Feature Manual References
20.1.1 Walking COS
19.1.1 Verification Code Entry
5.1.6 Extension PIN (Personal Identification Number)
◆ **External Sensor—Ring Duration**

Specifies the length of time that the PBX waits for the called party to answer before canceling a sensor call.

**Default**
30 s

**Value Range**
10 × n (n=1–15) s

**Maintenance Console Location**
4.4 [2-3] Timers & Counters

**Programming Manual References**
None

**Feature Manual References**
5.1.9 External Sensor

◆ **Incoming Call Inter-digit Timer—DID**

Specifies the length of time between digits when receiving a DID number from a public network. The call will be redirected to a PBX operator when this timer expires.

**Default**
10 s

**Value Range**
0–30 s

**Maintenance Console Location**
4.4 [2-3] Timers & Counters

**Programming Manual References**
12.3 [10-3] DID Table

**Feature Manual References**
4.1.5 DID (Direct Inward Dialing)

◆ **Incoming Call Inter-digit Timer—TIE**

Specifies the length of time between digits when receiving a dialed number from a TIE line. The call will be redirected to a PBX operator when this timer expires.

**Default**
10 s
PT Display—PT Last Display Duration in Idle Mode

Specifies the length of time that the current information remains on the display after the extension returns to idle status.

Default
5 s

Value Range
1–15 s

Voice Mail (Caller from VM to CO)—On-hook Wait Time

Specifies the length of time from when the VPS seizes a CO line (for example, to transfer a call) until the VPS goes on hook. If the time specified here is too short, the VPS will be unable to dial the number and make a connection.

Default
10 s

Value Range
1–30 s
During Conversation—DTMF Signal Length

Specifies the length of time that a DTMF signal is sent when a number is dialed from a PT or PS during a conversation.

Default
160 ms

Value Range
80 ms, 160 ms, 240 ms, 320 ms
Feature Manual References
None

During Conversation—Pause Signal Time
Specifies the length of the pause inserted when the PAUSE button is pressed during a conversation.

Default
1.5 s

Value Range
1.5 s, 2.5 s, 3.5 s, 4.5 s

Maintenance Console Location
4.4 [2-3] Timers & Counters

Programming Manual References
None

Feature Manual References
13.1.4 Pause Insertion

System Wireless—PS Out of Range Timer
When the destination of an incoming call is a PS, specifies the length of time the PBX searches for the PS before setting its status to Out of Range.
If "0" is assigned, the timer is controlled by the cell station.

Default
0 s

Value Range
0 s, 4 s, 8 s

Maintenance Console Location
4.4 [2-3] Timers & Counters

Programming Manual References
4.17 [2-9] System Options—System Wireless—Out of Range Registration

Feature Manual References
13.1.17 Private Network Features—PS Roaming by Network ICD Group
◆ **SVM—Recording Time**
   Specifies the maximum length of a message recorded by the SVM feature.

   **Default**
   120 s

   **Value Range**
   1–600 s

   **Maintenance Console Location**
   4.4  [2-3] Timers & Counters

   **Programming Manual References**

   6.16  [4-2-5] Portable Station—Simplified Voice Message

   **Feature Manual References**
   16.1.5  SVM (Simplified Voice Message)

◆ **SVM—Dial Tone Continuous Time**
   Specifies the length of time that dial tone 3 is heard after all messages stored by the SVM feature for an extension are finished playing.

   **Default**
   5 s

   **Value Range**
   1–60 s

   **Maintenance Console Location**
   4.4  [2-3] Timers & Counters

   **Programming Manual References**
   6.9  [4-1-7] Wired Extension—Simplified Voice Message

**Feature Manual References**
3.1.17 Conference Group Call (KX-TDA50 only)
4.5  [2-4] Week Table

A specific time mode (day, night, lunch, or break) can be selected for operation depending on the time of day. The time mode can be switched either automatically or manually. Select the desired switching mode from the Time Service Switching Mode option.

Time Table numbers correspond to tenant numbers (for example, Tenant 1 uses Time Table 1). Select the desired Time Table from the Time Table No. list.

When in Automatic Switching mode, the time modes of the tenant are switched as programmed in the corresponding Time Table. Manual switching is possible only from an authorized extension (determined by COS).

- To adjust the currently displayed Time Table, click and drag the divisions between two time periods.
- To program the time blocks of the currently displayed Time Table, including adding or deleting time blocks, click Time Setting.
4.6 [2-4] Week Table—Time Setting

The start times of 4 different time blocks can be programmed for each day of the week, for the selected Time Table, as well as the start and end times of up to 3 break periods.

1. Day/Lunch/Night—Day1 Start, Lunch Start, Day2 Start, Night Start—Setting

Enables the setting of the start time for each time block.

**Default**

Day 1 Start, Night Start: Enable
Lunch Start, Day 2 Start: Disable

**Value Range**

Disable, Enable

**Maintenance Console Location**

4.6 [2-4] Week Table—Time Setting

**Programming Manual References**

None

**Feature Manual References**

17.1.3 Tenant Service
17.1.5 Time Service

1. Day/Lunch/Night—Day1 Start, Lunch Start, Day2 Start, Night Start—Hour, Minute

Specifies the start time for each time block. Times can only be set when 1. Day/Lunch/Night—Day1 Start, Lunch Start, Day2 Start, Night Start—Setting is set to Enable.

**Default**

Day1: 9:00
Lunch: 12:00
Day2: 13:00
Night: 17:00

**Value Range**

00:00–23:59

**Maintenance Console Location**

4.6 [2-4] Week Table—Time Setting

Feature Manual References
17.1.5 Time Service
4.8 [2-6-1] Numbering Plan—Main

Details of the extension numbering schemes, feature access numbers, and numbers to access other PBXs in a network can be programmed here. For more information on flexible numbering, see “6.1.4 Flexible Numbering/Fixed Numbering” in the Feature Manual.

**Extension**

The leading numbers and the number of additional digits of the extension numbers for a maximum of 64 different extension numbering schemes can be programmed.

**Leading Number**

Specifies the leading number of extension numbers and floating extension numbers.

**Default**

For KX-TDA50/KX-TDA100/KX-TDA200:

- Extension Numbering Scheme 01: 1
- Extension Numbering Scheme 02: 2
- Extension Numbering Scheme 03: 3
- Extension Numbering Scheme 04: 4
- Extension Numbering Scheme 21: 5
- Extension Numbering Scheme 22: 6
- Extension Numbering Scheme 05–20, 23–64: Not stored.

For KX-TDA600:

- Extension Numbering Scheme 01: 10
- Extension Numbering Scheme 02: 11
- Extension Numbering Scheme 03: 12
- Extension Numbering Scheme 04: 13
- Extension Numbering Scheme 05: 14
- Extension Numbering Scheme 06: 15
- Extension Numbering Scheme 07: 16
- Extension Numbering Scheme 08: 17
- Extension Numbering Scheme 09: 18
- Extension Numbering Scheme 10: 19
- Extension Numbering Scheme 11: 20
- Extension Numbering Scheme 12: 21
- Extension Numbering Scheme 13: 22
- Extension Numbering Scheme 14: 23
- Extension Numbering Scheme 15: 24
- Extension Numbering Scheme 16: 25
- Extension Numbering Scheme 17: 26
- Extension Numbering Scheme 18: 27
- Extension Numbering Scheme 19: 28
- Extension Numbering Scheme 20: 29
- Extension Numbering Scheme 21: 5
- Extension Numbering Scheme 22: 6
- Extension Numbering Scheme 23–64: Not stored.

Feature Manual References

13.1.13  PRIVATE NETWORK FEATURES
Quick Dialing numbers are used to call extensions or outside parties, or access certain features without having to dial their full numbers. It is possible to register Quick Dialing numbers that overlap with other registered numbers (refer to "Automatic Rerouting of VoIP Calls to Public CO Lines" in the Feature Manual). A maximum of 80 Quick Dialing numbers can be programmed. When an EMEC/MEC card is installed in the PBX, a maximum of 4000 (with the KX-TDA100/KX-TDA200/KX-TDA600) or 1000 (with the KX-TDA50) Quick Dialing numbers can be programmed. To display other sets of numbers, click the applicable tab.

For more information on flexible numbering, see "6.1.4 Flexible Numbering/Fixed Numbering" in the Feature Manual.

**Use quick dial for rerouting to public CO when TIE line does not work**

Specifies whether to check if the quick dial numbering plan is compatible (does not overlap) with the main numbering plan.

**Default**
Enable

**Value Range**
Disable: Checks whether the quick dial numbering plan is compatible with the main numbering plan.
Enable: Does not check whether the quick dial numbering plan is compatible with the main numbering plan.

◆ PT Operation—JOG Dial Speed
Selects the speed at which items scroll on the display when the Jog Dial is used.

Default
Normal

Value Range
Normal, High Speed
PT Operation—PT Ring Off Setting
Specifies whether incoming call ringing can be turned off at individual extensions. If disabled, users cannot prevent incoming calls from ringing.

Default
Enable

Value Range
Disable, Enable

PT Operation—Automatic Answer for Call from CO after
Specifies the number of times a PT in Hands-free Answerback mode will ring before a conversation is established automatically when it receives a call from a CO line.

Default
1 Ring

Value Range
No Ring, 1 Ring, 2 Rings, 3 Rings
Feature Manual References
8.1.1 Hands-free Answerback

◆ PT Operation—Automatic Hold by ICM / CO / ICD Group key

Selects whether calls are disconnected or held when an INTERCOM, PDN, CO, or ICD Group button is pressed while having a conversation.

Default
Disconnect

Value Range
Disable (Disconnect), Enable

Maintenance Console Location
4.17 [2-9] System Options

Programming Manual References
6.5 [4-1-4] Wired Extension—Flexible Button
6.13 [4-2-3] Portable Station—Flexible Button

Feature Manual References
3.1.2 Call Hold

◆ PT Operation—Hold Key Mode

Selects which extensions can retrieve a held call or a call that is transferred by Call Transfer without Announcement feature.

Default
Hold

Value Range
Hold: Any extension can retrieve a held call.
Exclusive Hold: Only the holding extension can retrieve a held call.

Maintenance Console Location
4.17 [2-9] System Options

Programming Manual References
None

Feature Manual References
3.1.2 Call Hold
Option 2

◆ Extension Clear—Call Waiting
  Specifies whether the Call Waiting setting is cleared when Extension Feature Clear is performed.
  
  **Default**
  Clear
  
  **Value Range**
  Clear, Do not clear

  **Maintenance Console Location**
  4.17 [2-9] System Options

  **Programming Manual References**
  None

  **Feature Manual References**
  5.1.5 Extension Feature Clear

◆ Extension Clear—Fwd/DND
  Specifies whether the FWD/DND setting is cleared when Extension Feature Clear is performed.
  
  **Default**
  Clear
  
  **Value Range**
  Clear, Do not clear

  **Maintenance Console Location**
  4.17 [2-9] System Options

  **Programming Manual References**
  None

  **Feature Manual References**
  5.1.5 Extension Feature Clear

◆ Extension Clear—Hot Line (Pickup Dial)
  Specifies whether the Hot Line setting is cleared when Extension Feature Clear is performed.
  
  **Default**
  Clear
Value Range
Clear, Do not clear

Maintenance Console Location
4.17 [2-9] System Options

Programming Manual References
None

Feature Manual References
5.1.5 Extension Feature Clear

◆ CODEC—System CODEC
Selects the codec type for DPTs and PSs.

Default
µ-Law

Value Range
A-Law, µ-Law

Maintenance Console Location
4.17 [2-9] System Options

Programming Manual References
None

Feature Manual References
None

◆ CODEC—Network CODEC (KX-TDA100/KX-TDA200/KX-TDA600 only)
Selects the codec type for ISDN or T1 lines.

Default
µ-Law

Value Range
A-Law, µ-Law

Maintenance Console Location
4.17 [2-9] System Options
End of Dial Plan—[#] as End of Dial for en Bloc mode (KX-TDA100/KX-TDA200/KX-TDA600 only)

Specifies whether to automatically send "#" as an end code when dialing to an ISDN line; if used as the end code, "#" will not be dialed out as part of a number even when the "#" key is pressed.

Default
Enable

Value Range
Disable, Enable

Maintenance Console Location
4.17 [2-9] System Options

Redial—Automatic Redial when No Answer (ISDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)

Selects whether Automatic Redial to an ISDN line is performed when the called party does not answer within a preprogrammed time period.

Default
Enable

Value Range
Disable, Enable

Maintenance Console Location
4.17 [2-9] System Options
Programming Manual References
4.4 [2-3] Timers & Counters—◆ Automatic Redial—Redial Call Ring Duration (KX-TDA100/KX-TDA200/KX-TDA600 only)

Feature Manual References
15.1.1 Redial, Last Number

◆ Redial—Save Dial After Connection to Redial Memory
Specifies whether any digits dialed after the called party answers (for example, to access a specific extension within another company) are also saved as part of the redial number.

Default
Enable

Value Range
Disable, Enable

Maintenance Console Location
4.17 [2-9] System Options

Programming Manual References
None

Feature Manual References
15.1.1 Redial, Last Number

◆ Redial—Call Log by Redial key
Enables display of the Outgoing Call Log on a DPT by pressing the REDIAL button while on hook.

Default
Disable

Value Range
Disable, Enable

Maintenance Console Location
4.17 [2-9] System Options

Programming Manual References
None

Feature Manual References
15.1.1 Redial, Last Number
◆ Extension - CO Call Limitation—For Incoming Call

Selects whether the time limit for extension-to-CO line calls applies to outgoing calls only or for both outgoing and incoming calls. COS determines the use of this feature, and the length of the time limit can be assigned on a trunk group basis.

Default
Disable

Value Range
Disable, Enable

Maintenance Console Location
4.17 [2-9] System Options

Programing Manual References
4.11 [2-7-1] Class of Service—COS Settings—CO & SMDR—◆ Extension-CO Line Call Duration Limit
5.1 [3-1-1] Trunk Group—TRG Settings—Main—◆ Extension-CO Duration Time (*60s)

Feature Manual References
3.1.15 CO Line Call Limitation

◆ Automatic Time Adjustment—by ISDN & Caller ID (FSK)

Enables the PBX to adjust its clock every day according to the time information that the network provides with the first call after 3:05 AM.
With the KX-TDA50, this parameter is shown as Automatic Time Adjustment—by Caller ID (FSK).

Default
Enable

Value Range
Disable, Enable

Maintenance Console Location
4.17 [2-9] System Options

   3.1.18 Confirmation Tone
   8.1.1 Hands-free Answerback
   13.1.1 Paging
◆ Confirmation Tone—Tone 3-1: Start Talking after Making Call / Call from Doorphone

Enables the PBX to send Confirmation Tone 3-1. Confirmation Tone 3-1 is heard from an extension when, for example, it pages another extension, or from a doorphone when the doorphone button is pressed.

**Default**
Enable

**Value Range**
Disable, Enable

**Maintenance Console Location**
4.17 [2-9] System Options

**Programming Manual References**
None

**Feature Manual References**
3.1.18 Confirmation Tone

◆ Confirmation Tone—Tone 3-2: Start Talking after Answering Call

Enables the PBX to send Confirmation Tone 3-2. Confirmation Tone 3-2 is heard from an extension when answering a call by, for example, the Call Pickup feature.

**Default**
Enable

**Value Range**
Disable, Enable

**Maintenance Console Location**
4.17 [2-9] System Options

**Programming Manual References**
None

**Feature Manual References**
3.1.18 Confirmation Tone

◆ Confirmation Tone—Tone 4-1: Start Conference

Enables the PBX to send Confirmation Tone 4-1. Confirmation Tone 4-1 is heard from an extension when a new party joins a conference call.
**Confirmation Tone—Tone 4-2 : Finish Conference**
Enables the PBX to send Confirmation Tone 4-2. Confirmation Tone 4-2 is heard from an extension when a party leaves a conference call.

**Default**
Enable

**Value Range**
Disable, Enable

**Maintenance Console Location**
4.17  [2-9] System Options

**Programming Manual References**
None

**Feature Manual References**
3.1.16  Conference
3.1.18  Confirmation Tone

**Confirmation Tone—Tone 5 : Hold**
Enables the PBX to send Confirmation Tone 5. Confirmation Tone 5 is heard from an extension when it holds a call.

**Default**
Enable
**Value Range**
Disable, Enable

**Maintenance Console Location**
4.17 [2-9] System Options

**Programming Manual References**
None

**Feature Manual References**
3.1.18 Confirmation Tone

◆ **Dial Tone—Distinctive Dial Tone**
Enables the PBX to send dial tones at different frequencies depending on the setting of the extension.

**Default**
Enable

**Value Range**
Disable, Enable

**Maintenance Console Location**
4.17 [2-9] System Options

**Programming Manual References**
None

**Feature Manual References**
4.1.3 Dial Tone

◆ **Dial Tone—Dial Tone for Extension**
Selects the dial tone the PBX sends to extensions to inform about the features activated on them.

**Default**
Type A

**Value Range**
Type A, Type B

**Maintenance Console Location**
4.17 [2-9] System Options
Programming Manual References
None

Feature Manual References
4.1.3  Dial Tone

◆ Dial Tone—Dial Tone for ARS
Selects the dial tone the PBX (instead of the network) sends to the caller when a call is made using the ARS feature, or ISDN En Bloc dialing.

Default
Type A

Value Range
Type A, Type B

Maintenance Console Location

### Option 4

**DSS Key—DSS key mode for Incoming Call**
Enables the use of a DSS button to pick up an incoming call to another extension or an ICD group.

**Default**
OFF

**Value Range**
ON or Flash, OFF

**Maintenance Console Location**
4.17 [2-9] System Options

**Programming Manual References**
None

**Feature Manual References**
3.1.6 Call Pickup
10.1.1 LED Indication

**DSS Key—Call Pick-up by DSS key for Direct Incoming Call**
Specifies whether a DSS button will light up or flash when a call rings at the specified extension. To enable this setting, **DSS Key—DSS key mode for Incoming Call** on this screen must be set to ON or Flash.

**Default**
Enable
**Value Range**
Disable: The DSS button will light up when a call arrives, but pressing it will not pick up the call.
Enable: The DSS button will flash when a call arrives, and pressing it will pick up the call.

**Maintenance Console Location**
4.17 [2-9] System Options

**Feature Manual References**
3.1.6 Call Pickup

**DSS Key—Call Pick-up by DSS key for ICD Group Call**
Specifies whether a DSS button will light up or flash when a call rings at the specified incoming call distribution group.
To enable this setting, **DSS Key—DSS key mode for Incoming Call** on this screen must be set to **ON or Flash**.

**Default**
Disable

**Value Range**
Disable: The DSS button will light up when a call arrives, but pressing it will not pick up the call.
Enable: The DSS button will flash when a call arrives, and pressing it will pick up the call.

**Maintenance Console Location**
4.17 [2-9] System Options

**Programming Manual References**
None

**Feature Manual References**
3.1.6 Call Pickup

**DSS Key—Automatic Transfer for Extension Call**
Specifies whether pressing a DSS or SDN button during an extension-to-extension call disconnects the current call or places the call on consultation hold.

**Default**
Disable
Value Range
Disable: The PBX disconnects the current call, and calls the extension assigned to the DSS or SDN button.
Enable: The PBX places the current call on consultation hold.

Maintenance Console Location
4.17 [2-9] System Options

Programming Manual References
None

Feature Manual References
3.1.8 Call Transfer

◆ Transfer—Transfer to Busy Extension without BSS Operation
Enables a transferred call to be queued when the transfer destination is busy.

Default
Disable

Value Range
Disable: The call is not transferred. (If the transfer destination has enabled the call waiting notification feature, it is possible to inform the destination about the call transfer.)
Enable: The transferred call is queued for the time period specified in ◆ Recall—Transfer Recall in 4.4 [2-3] Timers & Counters.

Feature Manual References
3.1.8 Call Transfer
9.1.6 ICD Group Features—Queuing

◆ Transfer—Automatic Answer for Transferred Call
Enables transferred calls (including direct extension calls) to be automatically answered, when using the Hands-free Answerback feature.

Default
Disable
**Value Range**
Disable, Enable

**Maintenance Console Location**
4.17 [2-9] System Options

**Programming Manual References**
None

**Feature Manual References**
8.1.1 Hands-free Answerback

◆ **Send CLIP of CO Caller to ISDN—when Transfer (CLIP of Held Party)**

Enables the transfer of related CLIP information when a party on hold is transferred. When set to "Enable", the transfer destination will receive the original caller's CLIP information, not the information of the extension that performed the transfer.

**Default**
Disable

**Value Range**
Disable, Enable

**Maintenance Console Location**
4.17 [2-9] System Options

**Programming Manual References**
None

**Feature Manual References**
3.1.13 CLIP (Calling Line Identification Presentation)

◆ **Send CLIP of CO Caller to ISDN—when ICD Group with Cellular Phone (KX-TDA100/KX-TDA200/KX-TDA600 only)**

Selects whether the CLIP number of the calling party or of the virtual PS is sent to the virtual PS's forwarding destination to identify the origin of a CO line call received at an ICD Group containing a virtual PS. This setting only applies to calls automatically forwarded to public CO lines using the virtual PS feature.

**Default**
Disable

**Value Range**
Disable: The CLIP number assigned to the virtual PS is sent.
Enable: The CLIP number of the calling party is sent.

**Feature Manual References**

13.1.16 Private Network Features—Network ICD Group
9.1.4 ICD Group Features—Outside Destinations

◆ **Private Network—Public Call through Private Network—Minimum Public Caller ID Digits**

Specifies the minimum length of Caller ID required for a call from a private network to be considered as a call from a public network.

**Default**

9

**Value Range**

0–15

**Maintenance Console Location**

4.17 [2-9] System Options

**Programming Manual References**

None

**Feature Manual References**

3.1.1 Caller ID

◆ **Private Network—TIE Call by Extension Numbering (Optional SD Card Required)**

Enables extensions at PBXs connected in a network to have the same extension numbering scheme and make TIE line calls to each other. For example, extension 101 is registered at PBX 1, and extension 102 is registered at PBX 2. The user of extension 1 dials 102 and the dialed number is not found at the local PBX, so the call is redirected to the specified TIE Line and connected to extension 102.

If disabled, different leading numbers need to be assigned for extensions at each PBX.

**Default**

Disable

3rd Party CTI—System status retry counter

Specifies the number of times that the alive check is repeated for Third Party Call Control CTI. When the alive check has been attempted the programmed number of times without success, the PBX assumes that the logical connection with the CTI application software has been lost.

Default
5

Value Range
0–10
**3rd Party CTI—CDR retry interval timer**

Specifies the length of time until the alive check of CDR is retried when no response is received, for Third Party Call Control CTI.

- **Default**
  - 20 s
- **Value Range**
  - 0–60 s

**3rd Party CTI—CDR retry counter**

Specifies the number of times that the alive check of CDR is repeated for Third Party Call Control CTI. When the alive check has been attempted the programmed number times, the association is released automatically.

- **Default**
  - 1
- **Value Range**
  - 0–10
CTI Multi PBX Control—PBX Name
Specifies the name of the PBX, for network programming reference.

Default
Not stored.

Value Range
Max. 20 characters

CTI Multi PBX Control—USB Serial Number
Specifies the serial number assigned to this PBX’s USB data transfers, used when multiple PBXs are connected via USB to one PC (for example, for CTI).

Default
1

Value Range
1–8

CTI Make Call—SLT Ring
Specifies whether to ring an SLT when a call is made from CTI, instead of the SLT.
Default
Disable

Value Range
Disable, Enable

Maintenance Console Location

Section 5

5.1 [3-1-1] Trunk Group—TRG Settings

CO lines can be organized into trunk groups. The settings of each trunk group determine the settings of the CO lines within that group. A maximum of 64 (with the KX-TDA50/KX-TDA100/KX-TDA200) or 96 (with the KX-TDA600) trunk groups can be programmed.

For more information on trunk groups, see "7.1.1 GROUP FEATURES" in the Feature Manual.

Main

◆ Group Name

Specifies the name of the trunk group for programming reference.

Default
Not stored.

Value Range
Max. 20 characters

Maintenance Console Location

12.1 [10-1] CO Line Settings

Feature Manual References
3.1.14 CO Line Access
5.3 [3-1-3] Caller ID Modification

The telephone numbers of incoming callers can be modified automatically according to preprogrammed modification tables, and then recorded for calling back.

**Leading Digits**

After the caller's number is modified by the Length of Digits Modification Tables or CLIP Modification Tables, the PBX checks the leading digits of the modified number for an area code programmed in the Caller ID Modification Table assigned to that trunk group. If it finds such a code, it removes digits and adds a number to the modified number. If this number is stored as a System Speed Dialing number, the caller's name can be shown on a PT display and the call can be routed to a certain extension (CLI destination). A maximum of 4 Caller ID Modification Tables, each containing 10 local/international call data and 1 long distance code, can be programmed. Each trunk group can select a table for use. Select the desired table from the **Modification Table** list.

If the telephone number does not contain an area code programmed here, it is modified based on the Long Distance Code settings.

◆ **Area Code (for Local / International Call Data 1–10)**

Specifies the leading number (area code) to look for in the incoming caller's number.

**Default**

For KX-TDA50:
- Local / International Call Data 1–9: Not stored.
- Local / International Call Data 10: 011

For KX-TDA100/KX-TDA200/KX-TDA600:
- Not stored.

**Value Range**

Max. 6 digits (consisting of 0–9, *, and #)

**Maintenance Console Location**

3.1.1 Caller ID

Length of Digits

The PBX adds a certain number of digits to the caller's number depending on the length of digits, as programmed in the Length of Digits Modification Tables assigned to the trunk group. This modification is applied.
to incoming CO line calls routed through public networks when the type of network numbering plan is Unknown or not specified. A maximum of 4 Length of Digits Modification Tables can be programmed. Select the desired table from the Modification Table list. If the length of digits of an incoming CO line call is less than the ◆ Minimum Caller ID Digits (for National), the caller’s number is not modified.

◆ Minimum Caller ID Digits (for International)

Specifies the minimum number of digits required in the caller’s number for it to be recognized as an international call. The value specified here must be larger than ◆ Minimum Caller ID Digits (for National).

Default
12

Value Range
1–31

Maintenance Console Location

Feature Manual References
3.1.1 Caller ID
5.4 [3-1-4] Dialing Plan

The PBX sends all of the dialed digits at once after an extension user completes dialing. The PBX can recognize
the end of dialing when the dialed telephone number starts with the programmed leading number and contains
the programmed total number of digits.
When the PBX recognizes the end of dialing to an analog CO line, the PBX cancels the muting of the caller’s
voice sent to the analog CO line immediately. If the PBX cannot recognize the end of dialing, the PBX mutes
the caller’s voice sent to an analog CO line from the time at which the last digit is dialed until the analog CO
line inter-digit timer expires.
4 tables can be programmed, each with a maximum of 50 leading numbers. Select the table to program from
the Dialing Plan Table list.
To assign a set of leading numbers automatically, click Auto Assign.

◆ Leading Number

Specifies the leading number to be regarded as the beginning of dialing.

Default
No. 1 in Dialing Plan Table 1: N11
No. 2 in Dialing Plan Table 1: NXX NXX XXXX
No. 3 in Dialing Plan Table 1: 1NXX NXX XXXX
Others: Not stored.

Value Range
Max. 32 digits (consisting of 0–9, *, #, N [2,3,4,5,6,7,8,9], P [0, 1], and X [0-9, *, and #])

5.9 [3-4] Paging Group

Extensions can be assigned to a paging group according to their extension user groups. External pagers can also be assigned to a paging group. One extension user group or external pager can belong to multiple paging groups. A maximum of 32 (with the KX-TDA50/KX-TDA100/KX-TDA200) or 96 (with the KX-TDA600) paging groups can be programmed.

To assign external pagers to paging groups, click **External Pager**. To assign extension user groups to paging groups easily, click **All Setting**.

◆ **Extension Group Name**

Indicates the name of the extension user group (reference only).

**Default**

For KX-TDA50/KX-TDA100/KX-TDA200:
Extension User Group 1–32: Extension Group 01–32

For KX-TDA600:
Extension User Group 1–96: Extension Group 01–96

**Value Range**

Max. 20 characters

◆ **Maintenance Console Location**

Extensions can be assigned as members of an incoming call distribution group. Calls to an incoming call distribution group are distributed to its member extensions as programmed. A maximum of 128 incoming call distribution groups can be programmed.

To view a list of all programmed extension numbers and types, click Extension List View (see 2.5.7 Tool—Extension List View). To assign extensions to ICD groups and change extension settings, click Member List.

For more information on ICD Groups, see "9.1.1 ICD GROUP FEATURES" in the Feature Manual.

**Main**

◆ Floating Extension Number

  Specifies the floating extension number of the incoming call distribution group.

  **Default**
  Groups 001–064: 601–664
  Groups 065–128: Not stored

  **Value Range**

Feature Manual References
6.1.6 FWD (Call Forwarding)
Each incoming call distribution group can have a maximum of 32 (with the KX-TDA50/KX-TDA100/ KX-TDA200) or 128 (with the KX-TDA600) members (extensions) assigned to it, and each member can have its own delayed ringing and Wrap-up time settings. An extension can be a member of multiple incoming call distribution groups. An ICD Group can also contain cellular phones, and network ICD groups (ICD groups at other PBXs in a network) using virtual PS (see "19.1.2 Virtual PS" in the Feature Manual). The forward destination assigned to a virtual PS (e.g., a cellular phone) can act as a member of an ICD group. Select the desired ICD group (1–128) from the ICD Group No. list. To assign members to the group, enter directly or click Extension No. Setting (see 2.1.6 Extension Number Setting). To copy the members to another group, click Member List Copy, select the group, and click OK.

**Extension Number**

Specifies the extension number of each member. In addition to the extension numbers of PT, SLT, PS, and T1-OPX extensions, floating extension numbers of PS Ring groups can also be specified.

**Default**

Not stored.

**Value Range**

Max. 5 digits (consisting of 0–9)

5.16 [3-6] Extension Hunting Group

If an extension within an idle extension hunting group is called when it is busy or in DND mode, the call can be redirected to another extension in the same hunting group, according to a preprogrammed hunting type. If there is no idle extension in the group, the call can then be redirected to the overflow destination, which can be different depending on the time mode (day/lunch/break/night). A maximum of 64 (with the KX-TDA50/KX-TDA100/KX-TDA200) or 128 (with the KX-TDA600) hunting groups can be programmed, each containing up to 16 extensions.

To assign members to the group, click Member List. To assign extensions as overflow destinations easily, click Destination Setting (see 2.1.6 Extension Number Setting).

5.18 [3-7-1] VM(DPT) Group—System Settings

A Panasonic Voice Processing System (VPS) with DPT Integration can be connected to DPT ports of the PBX. The DPT ports that are connected to the VPS are called a VM (DPT) Group.

With the KX-TDA50, a maximum of 1 VM (DPT) Group can be programmed; with the KX-TDA100/ KX-TDA200, 2 VM (DPT) Groups can be programmed; and with the KX-TDA600, 8 VM (DPT) groups can be programmed.

◆ Call Waiting on VM Group

Enables the queuing of calls when all extension ports of the VM (DPT) group are busy. (Call Waiting tone is not sent to any VM port.)

**Default**
Enable

**Value Range**
Disable, Enable

◆ Intercept to Mailbox

Enables the PBX to send the mailbox number of the called extension to the VPS when a call is redirected to the VM (DPT) group by Intercept Routing. When the VPS receives the mailbox number, the VPS answers the call with the appropriate mailbox.

**Default**
Enable

**Value Range**
Disable, Enable
6.10 [4-2-1] Portable Station—Extension Settings—Intercept Destination—Intercept Destination—When called party does not answer—Day, Lunch, Break, Night

Feature Manual References
19.1.3 Voice Mail (VM) Group
19.1.4 Voice Mail DPT (Digital) Integration

◆ Transfer Recall to Mailbox

Enables the PBX to send the mailbox number of the transfer destination extension to the VPS in these situations: (1) when a call is transferred to an extension by the Call Transfer without Announcement feature using the Automated Attendant (AA) service of the VPS, and the call is not answered within a programmed time period; (2) when the VPS is assigned as the Transfer Recall destination of a certain extension. When the VPS receives the mailbox number, the VPS answers the call with the appropriate mailbox.

Default
Enable

Value Range
Disable, Enable

Feature Manual References
5.1.7 Extension Port Configuration

◆ Telephone Type

Indicates the type of telephone connected to the extension port (reference only).

Default
Current connected telephone type

Value Range
DPT (15V)/DPT (40V): DPT is connected.
APT (15V): APT is connected.
DSS: DSS Console is connected.
VM: VPS is connected.
SLT: SLT is connected (or no telephone is connected to the Super Hybrid or SLT port).
ISDN-Ext: ISDN telephone is connected.
No Connection: No telephone is connected.
CS: CS is connected.
CS-M: High-density CS is connected with its master port.
CS-S1–3: High-density CS is connected with its slave port.
IP-EXT: IP-PT is connected.

17.1.3  Tenant Service

◆ COS
Specifies the COS of the extension.

Default
1

Value Range
1–64

Maintenance Console Location

Programming Manual References
4.11  [2-7-1] Class of Service—COS Settings

Feature Manual References
3.1.20  COS (Class of Service)

◆ Extension PIN
Specifies the PIN of the extension.

CAUTION
There is a risk that fraudulent telephone calls will be made if a third party discovers a personal identification number (PIN) (verification code PIN or extension PIN) of the PBX. The cost of such calls will be billed to the owner/renter of the PBX.
To protect the PBX from this kind of fraudulent use, we strongly recommend:
  a.  Keeping PINs secret.
  b.  Selecting complex, random PINs that cannot be easily guessed.
  c.  Changing PINs frequently.

Default
Not stored.

Value Range
Max. 10 digits (consisting of 0-9)

◆ Extension Number
Specifies the extension number of the extension.
To change the extension number of a wired extension, follow the steps below:
1. Type the new extension number, then click Apply.
2. Set the status of the extension port to "OUS", then "INS".
When changing the extension number, make sure that the extension port is not in use. If the extension number is changed while the port is in use, the new extension number will not come into effect.

Default
For KX-TDA50/KX-TDA100/KX-TDA200:
Starting at 101

For KX-TDA600:
Starting at 1001
(For port 01 of the first extension card that is installed. Extension numbers are preset for subsequent extensions by adding one to the previous extension number.)

Value Range
Max. 5 digits (consisting of 0–9)

◆ Outgoing Preferred Line
Selects the line to be seized after going off-hook to make a call.

Default
For KX-TDA50:
ICM

For KX-TDA100/KX-TDA200/KX-TDA600:
ICM/PDN

Value Range
For KX-TDA50:
No Line: No line is seized.
Idle: An idle CO line is seized automatically from the programmed trunk groups.
ICM: An extension line is seized.
F-1–F-36: A CO line programmed for a flexible button (F-1–F-36) is seized. A flexible button customized as a Single-CO, Group-CO, Loop-CO, or ICD Group button must be selected.

For KX-TDA100/KX-TDA200/KX-TDA600:
No Line: No line is seized.
Idle: An idle CO line is seized automatically from the programmed trunk groups.
ICM/PDN: An extension line is seized, or, for a PDN extension, an idle PDN button is selected.
F-1–F-36: A CO line programmed for a flexible button (F-1–F-36) is seized. A flexible button customized as a Single-CO, Group-CO, Loop-CO, or ICD Group button must be selected.

10.1.2 Line Preference—Incoming

◆ **Call Waiting Tone Type**

Selects the type of Call Waiting tone sent to the busy extension.

**Default**
CW Tone 1

**Value Range**
CW Tone 1, CW Tone 2

**Maintenance Console Location**
6.1 [4-1-1] Wired Extension—Extension Settings

**Programming Manual References**
None

**Feature Manual References**
3.1.10 Call Waiting Tone
◆ LCS Recording Mode

Specifies whether to continue or stop recording the message in the extension's mailbox when the extension user answers a call that was being monitored.

Default
Stop Record

Value Range
Stop Record, Keep Record

Maintenance Console Location
6.1 [4-1-1] Wired Extension—Extension Settings

Programming Manual References
None

Feature Manual References
19.1.4 Voice Mail DPT (Digital) Integration

◆ LCS Answer Mode

Specifies whether the extension's mailbox is monitored in Hands-free or Private mode.

Default
Hands free

Value Range
Hands free: Monitor through the built-in speaker
Private: Monitor through the handset or the built-in speaker after hearing a warning tone

Maintenance Console Location
6.1 [4-1-1] Wired Extension—Extension Settings

Programming Manual References
None

Feature Manual References
8.1.2 Hands-free Operation
19.1.4 Voice Mail DPT (Digital) Integration

Option 5
◆ Shelf (KX-TDA600 only)

Indicates the shelf position (reference only).
6.1  [4-1-1] Wired Extension—Extension Settings

Default
Current shelf number

Value Range
Shelf number

Maintenance Console Location
6.1  [4-1-1] Wired Extension—Extension Settings

Programming Manual References
None

Feature Manual References
None

◆ Slot
Indicates the slot position of each extension card (reference only).

Default
Current slot number

Value Range
Slot number

Maintenance Console Location
6.1  [4-1-1] Wired Extension—Extension Settings

Programming Manual References
3.1  [1-1] Slot

Feature Manual References
None

◆ Port
Indicates the port number (reference only).

Default
Current port number

Value Range
Port number
Maintenance Console Location

6.1 [4-1-1] Wired Extension—Extension Settings

Programming Manual References

3.5 [1-1] Slot—Port Property - Extension Port

Feature Manual References

None

◆ Extension Number

Specifies the extension number of the extension.
To change the extension number of a wired extension, follow the steps below:
1. Type the new extension number, then click Apply.
2. Set the status of the extension port to "OUS", then "INS".
When changing the extension number, make sure that the extension port is not in use. If the extension number is changed while the port is in use, the new extension number will not come into effect.

Default
For KX-TDA50/KX-TDA100/KX-TDA200:
Starting at 101

For KX-TDA600:
Starting at 1001
(For port 01 of the first extension card that is installed. Extension numbers are preset for subsequent extensions by adding one to the previous extension number.)

Value Range
Max. 5 digits (consisting of 0–9)

Maintenance Console Location

6.1 [4-1-1] Wired Extension—Extension Settings

Programming Manual References

3.6 [1-1] Slot—Port Property - Extension Port—Connection Command

6.1 [4-1-1] Wired Extension—Extension Settings

Programming Manual References
None

Feature Manual References
None

◆ Display Language
Selects the display language of the extension telephone.

Default
Language1

Value Range
Language1–Language5

Maintenance Console Location
6.1 [4-1-1] Wired Extension—Extension Settings

Programming Manual References
None

Feature Manual References
4.1.8 Display Information

◆ Incoming Call Display
Selects which caller information is shown on the first line of the extension’s display.

Default
Caller ID Name

Value Range
Caller ID Name, CO Line Name, DID Name

Maintenance Console Location
6.1 [4-1-1] Wired Extension—Extension Settings
Automatic LCD Switch when Start Talking

Enables the first line of the display to show the call duration automatically after answering a CO line call.

Default
Enable

Value Range
Disable, Enable

Maintenance Console Location
6.1 [4-1-1] Wired Extension—Extension Settings

Key Pad Tone

Specifies whether key pad tones are heard when dialing.

Default
On

Value Range
Off, On

Maintenance Console Location
6.1 [4-1-1] Wired Extension—Extension Settings
◆ **Automatic Answer for CO Call**

Enables the extension to answer an incoming CO line call automatically after a certain number of rings without going off-hook, when Hands-free Answerback has been set on the extension. This setting is only effective when ◆ **Forced Automatic Answer** on this screen has been set to **Off**.

**Default**
Disable

**Value Range**
Disable, Enable

**Maintenance Console Location**
6.1 [4-1-1] Wired Extension—Extension Settings

**Programming Manual References**
None

**Feature Manual References**
8.1.1 Hands-free Answerback

**Option 6**

◆ **Shelf (KX-TDA600 only)**

Indicates the shelf position (reference only).

**Value Range**
Max. 20 characters

**Maintenance Console Location**
6.1  [4-1-1] Wired Extension—Extension Settings

**Programming Manual References**
None

**Feature Manual References**
None

◆ **Forced Automatic Answer**
Specifies whether the extension automatically answers all incoming calls (both intercom and CO line calls) without going off-hook, regardless of the Hands-free Answerback setting.

**Default**
Off
**Value Range**
Off, On

**Maintenance Console Location**
6.1 [4-1-1] Wired Extension—Extension Settings

**Programming Manual References**
None

**Feature Manual References**
None

◆ **Flexible Button Programming Mode**

Specifies whether the extension user can modify all flexible buttons without limitation, or only the One-touch Dialing buttons. When the mode is set to One-touch Dial, there is no need to enter "2" before the number when customizing a One-touch Dialing button.

**Default**
No Limitation

**Value Range**
No Limitation, One-touch Dial

**Maintenance Console Location**
6.1 [4-1-1] Wired Extension—Extension Settings

**Programming Manual References**
None

**Feature Manual References**
None

◆ **ICM Tone**

Selects the ring tone for incoming calls arriving at the INTERCOM button or PDN buttons. Note that the ring tone specified here is applied to all PDN buttons on an extension.

**Default**
1

**Value Range**
KX-DT321/KX-NT265/KX-NT321: 1–8 (Even if ring tone 9–30 is selected, ring tone 1 is heard.)
Other telephones: 1–8 (Even if ring tone 9–30 is selected, ring tone 2 is heard.)
Display Lock / SVM Lock
Locks or unlocks the Incoming Call Log and Simplified Voice Message Log display (i.e., specifies whether other extension users can see the Incoming Call Log and SVM Log information at the extension).

Default
Unlock

Value Range
Unlock, Lock

Paging Deny
Specifies whether paging of the extension from other extensions is enabled.

Default
Disable

Value Range
Disable, Enable
Feature Manual References
13.1.1 Paging

Option 7

◆ Shelf (KX-TDA600 only)

4.18 [2-10] Extension CID Settings—◆ Extension Caller ID Resource-1, 2 (KX-TDA50 only)

Feature Manual References
3.1.1 Caller ID
Incoming Call Wait Timer for Extension Caller ID

Specifies the length of time that the ringing for a call is delayed when the call follows immediately after the previous unanswered call. When receiving two calls in quick succession (e.g., when a call waiting in a queue is directed to an extension immediately after the previous unanswered call stops ringing), some SLTs require a pause, after the first call stops ringing, to receive the second call’s Caller ID information. Note that for the KX-TDA50, the setting of this parameter is only effective when a resource for sending extension Caller ID is assigned in Extension Caller ID Resource-1, 2 (KX-TDA50 only) for the port in Extension CID Settings.

Default
0

Value Range
0–15 s

6.2 [4-1-1] Wired Extension—Extension Settings—CLIP Generate

CLIP Generate allows the CLIP numbers for a set of locations in series to be programmed together. Pre-assigned CLIP numbers for those locations will be overwritten. If a number generated here is longer than 16 digits, the additional digits will be discarded.

◆ Location Entry—Beginning Entry Location (Ext. Number)
  Specifies the extension number of the first location to be programmed.
  
  **Default**
  Extension number of port 01 of the first extension card that is installed.

  **Value Range**
  Wired extension number

◆ Location Entry—Number to Generate
  Specifies the number of locations to be programmed. A CLIP number will only be assigned to connected wired extensions, even if the number entered here is larger than the total number of wired extensions.
  
  **Default**
  Depends on installed cards

  **Value Range**
  1–total number of connected wired extensions

Feature Manual References
6.1.6 FWD (Call Forwarding)
6.4 [4-1-3] Wired Extension—Speed Dial

Personal Speed Dialing allows extension users to dial frequently dialed numbers using two-digit speed dialing numbers (00–99). A maximum of 10 Personal Speed Dialing numbers can be programmed for each extension, or 100 when an MEC (KX-TDA50/KX-TDA100/KX-TDA200) or EMEC (KX-TDA600) card is installed. Select the desired extension from the Extension Number / Name list. If an MEC/EMEC card is installed, the available speed dialing numbers are shown in sets of 20. Select the desired set from the Personal Speed Dialing No. list.

◆ Speed Dialing Name

Specifies the name of the Personal Speed Dialing number to call using the Personal Speed Dialing Directory shown on the extension’s display.

**Default**
Not stored.

**Value Range**
Max. 20 characters

**Maintenance Console Location**

Feature Manual References

16.1.3 Speed Dialing, Personal
6.5 [4-1-4] Wired Extension—Flexible Button

Each flexible button can be customized to allow one-touch access to a certain feature. A maximum of 36 flexible buttons can be customized for each extension. The settings can then be printed out as a key label template and attached to your extension for quick reference. Select the desired extension from the **Extension Number / Name** list.

To copy the flexible button settings of an extension to another extension, click **Copy to**.

To print the flexible button settings of an extension, click **Key Label Print**.

The key label settings related to display - Label, Color of Font, Color of Background, Font Size, and Telephone Type - can be saved for future use. Select an action from the **Key Label File** drop-down list. Note that it is necessary to save these settings separately from system data.

For more information on flexible buttons, see “6.1.3 Flexible Buttons” in the Feature Manual.

**Display Option—Key Setting**

◆ **Type**

Specifies the feature to be assigned to the flexible button.

**Default**

**KX-TDA50**

Key Location 1–16: Single CO

Key Location 17–36: Not stored

**KX-TDA100/KX-TDA200/KX-TDA600**

Single CO

**Value Range**

Not Stored, Loop CO, Single CO, Group CO, DSS, One-touch, ICD Group, Message Waiting, FWD/DND (Both), FWD/DND (External), FWD/DND (Internal), Group Fwd (Both), Group Fwd (External), Group Fwd (Internal), Account, Conference, Terminate, EFA, Call Park, Call Log, Log-in/Log-out, Hurry-up, Wrap-up, System Alarm, Time Service, Answer, Release, TRS Level Change, CLIR, COLR, Headset, Time Service - Automatic/Manual, Check In, Check Out, Cleaned Up (KX-TDA50/KX-TDA100/KX-TDA200 only), Two-way Record, Two-way Transfer, LCS, Voice Mail Transfer, NDSS, CTI, PDN (KX-TDA100/KX-TDA200/KX-TDA600 only), SDN (KX-TDA100/KX-TDA200/KX-TDA600 only)

◆ Ext. No. / Floating Ext. No. (for SDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)
Specifies the floating extension number of the PDN extension corresponding to this SDN button.
Note that the extension specified here must have a PDN button registered for the SDN button to function.

Default
Not stored.

Value Range
Max. 5 digits (consisting of 0–9)
Dial (for One-touch)

Specifies the number to be dialed. The PBX can have a maximum of 2000 (with the KX-TDA50/KX-TDA100/KX-TDA200) or 5000 (with the KX-TDA600) One-touch Dialing buttons for extensions and DSS Consoles.

**Default**

Not stored.

**Value Range**

Max. 32 digits (consisting of 0–9, *, #, T [Transfer], [ ] [Secret], P [Pause], and F [Flash])

Dial (for NDSS)

 Specifies the network extension number of the extension to be accessed using Network Direct Station Selection.

Note that only extension numbers that have been previously registered in 11.4 [9-4] NDSS Key Table can be specified here.

**Default**

Not stored.

**Value Range**

Max. 16 digits (consisting of 0–9, *, #, T [Transfer], [ ] [Secret], P [Pause], and F [Flash])
Optional Parameter (Ringing Tone Type Number) (for Time Service)

Specifies the Time Table to be used for changing time modes in the Automatic Switching mode.

Default
1

Value Range
1–8

Maintenance Console Location
6.5 [4-1-4] Wired Extension—Flexible Button

Optional Parameter (Ringing Tone Type Number) (for Loop CO, Single CO, Group CO, ICD Group, SDN)

Specifies the ring tone type.

Default
1

Value Range
KX-DT321/KX-NT265/KX-NT321: 1–8 (Even if ring tone 9–30 is selected, ring tone 1 is heard.)
Other telephones: 1–8 (Even if ring tone 9–30 is selected, ring tone 2 is heard.)

Card1(A)

**Value Range**

For KX-TDA50/KX-TDA100/KX-TDA200:
None, Card1, Card2

For KX-TDA600:
None, Card1(A), Card1(B), Card2(A), Card2(B)

**Maintenance Console Location**

6.9 [4-1-7] Wired Extension—Simplified Voice Message

**Programming Manual References**

None

**Feature Manual References**

None

◆ **Maximum SVM Log**

Specifies the maximum number of voice messages (not including greeting messages) that can be stored for the extension.

**Default**

10

**Value Range**

1–100

**Maintenance Console Location**

6.9 [4-1-7] Wired Extension—Simplified Voice Message

**Programming Manual References**

None

**Feature Manual References**

None
6.10 [4-2-1] Portable Station—Extension Settings

For each Portable Station (PS), various extension settings can be assigned. A maximum of 28 (with the KX-TDA50), 128 (with the KX-TDA100/KX-TDA200), or 512 (with the KX-TDA600) PSs can be programmed. To assign names and tenants to extension user groups, click Extension User Group Table. See 5.6 [3-2] Extension Group for more details.

Main

◆ Extension Number

Indicates the extension number of the PS (reference only).

Default
Not stored.

Value Range
Max. 4 digits (consisting of 0–9)

Maintenance Console Location
6.10 [4-2-1] Portable Station—Extension Settings

Programming Manual References
3.34 [1-2] Portable Station—◆ Extension No.

Feature Manual References
None

◆ Extension Name

Specifies the name of the PS.

Default
Not stored.

Value Range
Max. 20 characters

Maintenance Console Location
6.10 [4-2-1] Portable Station—Extension Settings

Programming Manual References
3.34 [1-2] Portable Station—◆ Extension Name

Feature Manual References
None
**Property**
Indicates the property (reference only).

**Default**
Portable Station

**Value Range**
Portable Station

**Maintenance Console Location**
6.10 [4-2-1] Portable Station—Extension Settings

**Programming Manual References**
None

**Feature Manual References**
None

**Extension Group**
Specifies the extension user group to which the PS belongs. The extension user group is used to compose tenants, call pickup groups and paging groups.

**Default**
1

**Value Range**
For KX-TDA50/KX-TDA100/KX-TDA200:
1–32

For KX-TDA600:
1–96

**Maintenance Console Location**
6.10 [4-2-1] Portable Station—Extension Settings

**Programming Manual References**
None

**Feature Manual References**
7.1.1 GROUP FEATURES
17.1.3 Tenant Service

**COS**
Specifies the COS of the PS.
Extension PIN

Specifies the PIN of the PS.

**CAUTION**
There is a risk that fraudulent telephone calls will be made if a third party discovers a personal identification number (PIN) (verification code PIN or extension PIN) of the PBX. The cost of such calls will be billed to the owner/renter of the PBX.
To protect the PBX from this kind of fraudulent use, we strongly recommend:

a. Keeping PINs secret.
b. Selecting complex, random PINs that cannot be easily guessed.
c. Changing PINs frequently.

Default
Not stored.

Value Range
Max. 10 digits (consisting of 0–9)
**Intercept Destination**

◆ **Extension Number**

Indicates the extension number of the PS (reference only).

**Default**
Not stored.

**Value Range**
Max. 4 digits (consisting of 0–9)

**Maintenance Console Location**
6.10 [4-2-1] Portable Station—Extension Settings

**Programming Manual References**
3.34 [1-2] Portable Station—◆ Extension No.

◆ Extension Name
Specifies the name of the PS.

Default
Not stored.

Value Range
Max. 20 characters
◆ Call Pickup Deny

Specifies whether calls can be picked up by other extensions.

Default
Disable

Value Range
Disable: Allows other extension users to pick up calls to your PS
Enable: Prevents other extension users from picking up calls to your PS

◆ Executive Override Deny

Specifies whether calls can be interrupted by other extensions.

Default
Disable

Value Range
Disable: Allows other extension users to interrupt an existing call
Enable: Prevents other extension users from interrupting an existing call
Feature Manual References
5.1.3 Executive Busy Override

◆ Absent Message
Specifications the Personal Absent Message which, unlike the System Absent Message, can be customized for each PS.

Default
Not stored.

Value Range
Max. 16 characters

Maintenance Console Location
6.10 [4-2-1] Portable Station—Extension Settings

Programming Manual References
None

Feature Manual References
1.1.1 Absent Message

Option 4
◆ Extension Number
Indicates the extension number of the PS (reference only).

Default

Outgoing Preferred Line

Selects the line to be seized after going off-hook to make a call.

Default

For KX-TDA50:
ICM

For KX-TDA100/KX-TDA200/KX-TDA600:
ICM/PDN

Value Range

For KX-TDA50:

No Line: No line is seized.
Idle: An idle CO line is seized automatically from the programmed trunk groups.
ICM: An extension line is seized.
F-1–F-12: A CO line programmed for a flexible button (F-1–F-12) is seized. A flexible button customized as a Single-CO, Group-CO, Loop-CO, or ICD Group button must be selected.

For KX-TDA100/KX-TDA200/KX-TDA600:

No Line: No line is seized.
Idle: An idle CO line is seized automatically from the programmed trunk groups.
ICM/PDN: An extension line is seized, or, for a PDN extension, an idle PDN button is selected.
F-1–F-12: A CO line programmed for a flexible button (F-1–F-12) is seized. A flexible button customized as a Single-CO, Group-CO, Loop-CO, or ICD Group button must be selected.
**Incoming Preferred Line**

Selects the line on which an incoming call is answered after going off-hook. Note that even if a specific PDN button is selected here, a call ringing at any PDN button on the extension will be answered when going off-hook.

**Default**
Ringing Line

**Value Range**
No Line: No line is selected. Select a line by pressing the desired Line Access button to answer a call.
Ringing Line: The longest ringing call is selected.
PDN (KX-TDA100/KX-TDA200/KX-TDA600 only): The call arriving at any PDN button is selected.
F-1–F-12: The call arriving at a flexible button (F-1–F-12) is selected. A flexible button customized as a Single-CO, Group-CO, Loop-CO, or ICD Group button must be selected.

**Maintenance Console Location**
6.10 [4-2-1] Portable Station—Extension Settings

**Programming Manual References**
None

**Feature Manual References**
4.1.8 Display Information

◆ **Incoming Call Display**

Selects which caller information is shown on the first line of the PS’s display.

**Default**
Caller ID Name

**Value Range**
Caller ID Name, CO Line Name, DID Name
Automatic LCD Switch when Start Talking

Enables the first line of the display to show the call duration automatically after answering a CO line call.

Default
Enable

Value Range
Disable, Enable

Extension Number

Indicates the extension number of the PS (reference only).

Default
Not stored.

Value Range
Max. 4 digits (consisting of 0–9)
Learned Manual References
None

◆ Extension Name
   Specifies the name of the PS.

Feature Manual References
6.1.6 FWD (Call Forwarding)
6.11 [4-2-1] Portable Station—Extension Settings—CLIP Generate

CLIP Generate allows the CLIP numbers for a set of locations in series to be programmed together. Pre-assigned CLIP numbers for those locations will be overwritten. If a number generated here is longer than 16 digits, the additional digits will be discarded.

◆ Location Entry—Beginning Entry Location (Ext. Number)

Specifies the extension number of the first location to be programmed.

Default
Not stored.

Value Range
PS extension number

Maintenance Console Location
6.11 [4-2-1] Portable Station—Extension Settings—CLIP Generate

Programming Manual References
6.10 [4-2-1] Portable Station—Extension Settings

Feature Manual References
3.1.13 CLIP (Calling Line Identification Presentation)

◆ Location Entry—Number to Generate

Specifies the number of locations to be programmed. A CLIP number will only be assigned to registered PS extensions, even if the number entered here is larger than the total number of PS extensions.

Default
1

Value Range
1–total number of connected wired extensions

Feature Manual References
6.1.7 FWD/DND Button, Group FWD Button

◆ Call from Extension—FWD Status Availability
Enables or disables the FWD feature for incoming intercom calls.

Default
OFF

Value Range
OFF: Enables extensions to switch to FWD mode by pressing the FWD/DND button, if forward settings have been programmed.
ON: Prevents extensions from switching to FWD mode by pressing the FWD/DND button.
Call from Extension—DND Status Availability

Enables or disables the DND feature for incoming intercom calls.

Default
OFF

Value Range
OFF: Enables extensions to switch to DND mode by pressing the FWD/DND button.
ON: Prevents extensions from switching to DND mode by pressing the FWD/DND button.

Call from Extension—FWD Mode

Specifies the circumstances when incoming intercom calls are forwarded.

Default
None

Value Range
None, FWD All, FWD Busy, FWD N/A, FWD Busy N/A
Call from Extension—FWD Destination
Specifies the forwarding destination of incoming intercom calls.

Default
Not stored.

Value Range
Max. 32 digits (consisting of 0–9, *, #, [, ] [Secret], and P [Pause])

FWD No Answer Timer
Specifies the length of time that an incoming call rings at the PS before the call is forwarded.

Default
15 s

Value Range
0–120 s
6.13  [4-2-3] Portable Station—Flexible Button

Each flexible button can be customized to allow one-touch access to a certain feature. A maximum of 12 flexible buttons can be customized for each PS. Select the desired PS from the Extension Number / Name list. To copy values from one location to another, click the Copy to button.

For more information on flexible buttons, see “6.1.3  Flexible Buttons” in the Feature Manual.

Display Option—Key Setting

◆ Type

Specifies the feature to be assigned to the flexible button.

Default
Single CO

Value Range
Not Stored, Loop CO, Single CO, Group CO, DSS, One-touch, ICD Group, Message Waiting, FWD/DND (Both), FWD/DND (External), FWD/DND (Internal), Group Fwd (Both), Group Fwd (External), Group Fwd (Internal), Account, Conference, Terminate, EFA, Call Park, Log-in/Log-out, Hurry-up, Wrap-up, Time Service, TRS Level Change, CLIR, COLR, Time Service - Automatic/Manual, Two-way Record, Two-way Transfer, LCS, Voice Mail Transfer, NDSS, CTI, PDN (KX-TDA100/KX-TDA200/KX-TDA600 only), SDN (KX-TDA100/KX-TDA200/KX-TDA600 only)

◆ Parameter Selection (for Single CO)

Specifies the CO line to be accessed.

Default
1

Value Range
For KX-TDA50:
1–16

For KX-TDA100/KX-TDA200:
1–128

For KX-TDA600:
1–640
Parameter Selection (for Group CO)

Specifies the trunk group to be accessed.

**Default**

1

**Value Range**

For KX-TDA50/KX-TDA100/KX-TDA200:

1–64

For KX-TDA600:

1–96

Parameter Selection (for Call Park)

Specifies whether a call is parked in an idle parking zone automatically, or in a specific parking zone.

**Default**

Automatic

**Value Range**

Automatic, Specific
Parameter Selection (for Log-in/Log-out)
Specifies which incoming call distribution groups that the PS belongs to are logged in to or logged out from.

Default
None

Value Range
None: The incoming call distribution group is selected manually.
All: All incoming call distribution groups that the PS belongs to.
Incoming Group: A pre-specified incoming call distribution group

Maintenance Console Location
6.13 [4-2-3] Portable Station—Flexible Button

Parameter Selection (for Time Service)
Selects which time modes are switched manually.

Default
All

Value Range
All (Day/Night/Lunch/Break), Day/Night/Break, Day/Night/Lunch, Day/Night

Maintenance Console Location
6.13 [4-2-3] Portable Station—Flexible Button
Parameter Selection (for TRS Level Change)
Specifies the TRS level to be used temporarily on a certain PS.

6.13 [4-2-3] Portable Station—Flexible Button—◆ Parameter Selection (for Single CO)
12.1 [10-1] CO Line Settings—◆ CO Name

Feature Manual References

13.1.25 PS—CO Status Display (KX-WT125/KX-WT126 only) (KX-TDA50 only)
6.18 [4-3] DSS Console

A DSS Console can be used in conjunction with a PT. A maximum of 4 (with the KX-TDA50), 8 (with the KX-TDA100/KX-TDA200), or 64 (with the KX-TDA600) DSS Consoles can be programmed. The **DPT Type** —Type of the extension port that the DSS Console is connected to must be set to **DSS** in **3.5 [1-1] Slot**— **Port Property - Extension Port**.

Each flexible DSS button can be customized to access a certain feature. A maximum of 66 flexible DSS buttons can be customized for each DSS Console. The settings can then be printed out as a key label template and attached to your DSS Console for quick reference. Select the desired DSS Console from the **DSS Console No.** list.

To copy the flexible DSS button settings from one location to another, click the **Copy to** button.

To print the flexible DSS button settings, click **Key Label Print**.

The key label settings related to display - Label, Color of Font, Color of Background, Font Size, and DSS Type - can be saved for future use. Select an action from the **Key Label File** drop-down list. Note that it is necessary to save these settings separately from system data.

For more information on flexible buttons, see "6.1.3 Flexible Buttons" in the Feature Manual.

**Pair Extension**

Specifies the extension number of the PT to be used in pair with the DSS Console. Note that if one or more SDN buttons have been set at the DSS Console, they must be deleted before this setting can be changed.

**Default**

None

**Value Range**

None, Max. 5 digits (consisting of 0–9)

**Maintenance Console Location**

6.18 [4-3] DSS Console

**Display Option—Key Setting**

**Type**

Specifies the feature to be assigned to the flexible DSS button.

**Default**

Not stored.

**Value Range**

Not Stored, Loop CO, Single CO, Group CO, DSS, One-touch, ICD Group, Message Waiting, FWD/DND (Both), FWD/DND (External), FWD/DND (Internal), Group Fwd (Both), Group Fwd (External), Group Fwd
(Internal), Account, Conference, Terminate, EFA, Call Park, Call Log, Log-in/Log-out, Hurry-up, Wrap-up, System Alarm, Time Service, Answer, Release, TRS Level Change, CLIR, COLR, Headset, Time Service - Automatic/Manual, Check In, Check Out, Cleaned Up (KX-TDA50/KX-TDA100/KX-TDA200 only), Two-way Record, Two-way Transfer, LCS, Voice Mail Transfer, NDSS, CTI, SDN (KX-TDA100/KX-TDA200/ KX-TDA600 only)

19.1.4  Voice Mail DPT (Digital) Integration

◆ Ext. No. / Floating Ext. No. (for SDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)
Specifies the floating extension number of the PDN extension corresponding to the SDN button. Note that the extension specified here must have a PDN button registered for the SDN button to function.

Default
Not stored.

Value Range
Max. 5 digits (consisting of 0–9)

Maintenance Console Location
6.18  [4-3] DSS Console

Programming Manual References
None

Feature Manual References
13.1.7  PDN (Primary Directory Number)/SDN (Secondary Directory Number) Extension

◆ Dial (for One-touch)
Specifies the number to be dialed. The PBX can have a maximum of 2000 (with the KX-TDA50/KX-TDA100/KX-TDA200) or 5000 (with the KX-TDA600) One-touch Dialing buttons for extensions and DSS Consoles.

Default
Not stored.

Value Range
Max. 32 digits (consisting of 0–9, *, #, T [Transfer], [ ] [Secret], P [Pause], and F [Flash])

Maintenance Console Location
6.18  [4-3] DSS Console
Dial (for NDSS)

Specifies the network extension number of the extension to be accessed using Network Direct Station Selection.

Note that only extension numbers that have been previously registered in 11.4 [9-4] NDSS Key Table can be specified here.

Default
Not stored.

Value Range
Max. 16 digits (consisting of 0–9, *, #, T [Transfer], [ ] [Secret], P [Pause], and F [Flash])

Optional Parameter (Ringing Tone Type Number) (for Time Service)

Specifies the Time Table to be used for changing time modes in the Automatic Switching mode.

Default
1

Value Range
1–8

Maintenance Console Location
6.18 [4-3] DSS Console
Feature Manual References
17.1.5 Time Service

◆ Optional Parameter (Ringing Tone Type Number) (for Loop CO, Single CO, Group CO, ICD Group, SDN)

Specifies the ring tone type.

Default
1

Value Range
KX-DT321/KX-NT265/KX-NT321: 1–8 (Even if ring tone 9–30 is selected, ring tone 1 is heard.)
Other telephones: 1–8 (Even if ring tone 9–30 is selected, ring tone 2 is heard.)

7.3 [5-3-1] Voice Message—DISA System

Direct Inward System Access (DISA) enables outside callers to access specific PBX features as if the caller were using an SLT extension of the PBX. For more information on DISA, see "4.1.7 DISA (Direct Inward System Access)" in the Feature Manual.

Option 1

◆ DISA Security—DISA Security Mode

Selects the DISA security mode to prevent unauthorized access to the PBX. In CO Line or All Security mode, the caller is required to override security by Walking COS or Verification Code Entry in order to enable the restricted feature temporarily.

Default
Trunk

Value Range
None: Intercom calls, TIE line calls, and CO line calls can be made.
Trunk: Intercom calls and TIE line calls without PBX code can be made. TIE line calls with PBX code and CO line calls are restricted.
All: All calls are restricted.

**Programming Manual References**
None

**Feature Manual References**
None

◆ CO-CO with DISA—DISA to Public CO
Specifies whether the DISA port of the message card is released when a CO-to-CO line call using DISA is established. To enable this setting, "◆ CO-CO with DISA—Fwd/Transfer to Public CO" on this screen should be set to "Enable". Setting this to "Disable" will free up DISA ports faster, but prevent DISA being used to detect the end of a call and disconnect the CO line quickly.

**Default**
Enable

**Value Range**
Disable (Release DISA): The DISA port of the message card is released when a CO-to-CO line call using DISA is established.
Enable: DISA stays connected for the duration of the call, to allow detection of the end of the call.

**Maintenance Console Location**

None

**Feature Manual References**

None

**CO-CO with DISA—Return to DISA Top Menu by DTMF "*"**

Enables a CO line caller to return to the DISA top menu by pressing "*" while hearing a ringback, reorder, or busy tone. If disabled, retrying the call is possible by pressing "x".
Option 2

**DISA Cyclic Tone Detection**

Selects the cyclic tone detection mode. Cyclic tone detection is used to determine the end of a call for a DISA CO-to-CO line conversation established through an analog CO line.

To apply changes to this setting, follow the steps below:

1. Change this setting.
2. Set the status of the MSG/ESVM card (KX-TDA50) or OPB3 card (KX-TDA100/KX-TDA200/KX-TDA600) to "OUS", then "INS".

**Default**

Fixed

**Value Range**

Fixed: The number of times of a tone pattern (a set of tone-on and tone-off) that the PBX receives is fixed to 4 times in the ranges of:

\[
\begin{align*}
\text{A} & \quad \text{B} \\
\text{C} & \quad \text{D} \\
\text{C} & \quad \text{D} \\
\text{A} & \quad \text{B}
\end{align*}
\]

\(\text{A, B} = 100–1300 \text{ ms}, \text{C} = \text{A±90 ms}, \text{D} = \text{B±90 ms}\)

Option: The tone pattern that the PBX receives is optional as specified in **DISA Cyclic Tone Option** on this screen.

[6] Feature
8.1 [6-1] System Speed Dial

The System Speed Dialing Table is used to store frequently dialed numbers as well as callers who should be automatically routed to certain extensions when they call (Calling Line Identification [CLI] distribution). The System Speed Dialing Table is available for all extension users when making or receiving a call. A maximum of 1000 System Speed Dialing numbers (e.g., telephone numbers, feature numbers) can be programmed with other related parameters. 100 numbers are displayed at a time. To display other sets of numbers, click the applicable tab.

◆ Memory

Selects the System Speed Dialing Table to be programmed. Whether a tenant uses the basic System Speed Dialing Table or the additional table (with MEC [KX-TDA50/KX-TDA100/KX-TDA200] or EMEC [KX-TDA600] card) depends on the setting of ◆ System Speed Dial in 8.6 [6-6] Tenant.

Default
Basic Memory

Value Range
For KX-TDA50:
Basic Memory: the standard table
Expanded Memory: additional table (only available when an MEC card is installed to the PBX)

For KX-TDA100/KX-TDA200:
Basic Memory: the standard table
Expanded Memory for Tenant 1–8: additional tables (only available when an MEC card is installed to the PBX)

For KX-TDA600:
Basic Memory: the standard table
Expanded Memory for Tenant 1–32: additional tables (only available when an EMEC card is installed to the PBX)

Programming Manual References
8.3 [6-3] Verification Code

A verification code is used to override the Toll Restriction (TRS) of the extension in use to make a certain CO line call, or to identify the call for accounting and billing purposes. A maximum of 1000 verification codes can be programmed with other related parameters. 100 codes are displayed at a time. To display other sets of codes, click the applicable tab.

**Verification Code**

Specifies the verification code.

**Default**

Not stored.

**Value Range**

Max. 4 digits (consisting of 0–9, *, and #)

**Feature Manual References**

19.1.1 Verification Code Entry
Verification Code PIN

Specifies the PIN to be entered when making a CO line call with the verification code.

**CAUTION**

There is a risk that fraudulent telephone calls will be made if a third party discovers a personal identification number (PIN) (verification code PIN or extension PIN) of the PBX. The cost of such calls will be billed to the owner/renter of the PBX. To protect the PBX from this kind of fraudulent use, we strongly recommend:

a. Keeping PINs secret.

b. Selecting complex, random PINs that cannot be easily guessed.

c. Changing PINs frequently.

Default

Not stored.

Value Range

Max. 10 digits (consisting of 0–9)

8.5 [6-5] Absent Message

When a display PT user calls an extension, a message is shown on the caller’s telephone display describing the reason for absence. A maximum of 8 Absent Messages can be programmed, and any extension user can select one of them.

◆ Absent Message

Specifies the message for display.

Default
1: Will Return Soon
2: Gone Home
3: At Ext %%%% (Extension Number)
4: Back at %%%:%% (Hour:Minute)
5: Out until %%/%%% (Month/Day)
6: In a Meeting
7 and 8: Not stored.

Value Range
Max. 16 characters

Maintenance Console Location
8.5 [6-5] Absent Message

Programming Manual References

Feature Manual References
1.1.1 Absent Message
8.6 [6-6] Tenant

A maximum of 8 (KX-TDA50/KX-TDA100/KX-TDA200)/32 (KX-TDA600) tenants can share the PBX. Each tenant is composed of specified extension user groups. The PBX offers each tenant its own Time Table and system resources.

To assign extensions as operators easily, click Extension No. Setting (see 2.1.6 Extension Number Setting).

◆ Music On Hold

Specifies the audio source to be used for Music on Hold.

Default
Same as System Setting

Value Range
For KX-TDA50:
Same as System Setting, BGM, Tone

For KX-TDA100/KX-TDA200/KX-TDA600:
Same as System Setting, BGM 1, BGM 2, Tone

◆ Operator (Extension Number)

Specifies the extension number or the floating extension number of an incoming call distribution group to be designated as the tenant operator. When this parameter is left unspecified, the PBX operator serves as the tenant operator.

Default
Not stored.

Value Range
Max. 5 digits (consisting of 0–9)

Maintenance Console Location
8.6 [6-6] Tenant
ARS Mode

Specifies the ARS mode used when making a CO line call.

Default
Same as System Setting

Value Range
Off: ARS is disabled.
On for Local Access Operation: ARS operates when an extension user makes a call using any Idle Line Access method.
Same as System Setting: The setting specified in ◆ ARS Mode in 10.1 [8-1] System Setting is applied.

System Speed Dial

Specifies which system speed dialing table is used by the tenant. This setting is only available when an MEC (KX-TDA50/KX-TDA100/KX-TDA200) or EMEC (KX-TDA600) card is installed.

Default
For KX-TDA50:
Basic Memory

For KX-TDA100/KX-TDA200/KX-TDA600:
Same as System Setting

Value Range
For KX-TDA50:
Basic Memory: PBX basic system speed dialing numbers are used.
Expanded Memory: Expansion system speed dialing numbers are used.
For KX-TDA100/KX-TDA200/KX-TDA600:
Same as System Setting: PBX common system speed dialing numbers are used.
Tenant Exclusive: Individual tenant system speed dialing numbers are used.

Section 9

[7] TRS
9.1 [7-1] Denied Code

Toll Restriction (TRS) prohibits an extension from making certain CO line calls. Each time mode of every COS is assigned one of the seven TRS levels. TRS level 7 provides the maximum restriction (all CO line calls are prohibited) and level 1 provides the minimum (all CO line calls are allowed). TRS levels 2–6 are used to restrict calls according to the codes programmed in the Denied Code Tables here and Exception Code Tables in 9.2 [7-2] Exception Code. If the leading digits of the dialed number are not found in the applicable Denied Code Tables, the call is made.

A maximum of 100 denied codes can be programmed for each level. 20 codes are displayed at a time. To display other sets of codes, click the applicable tab.

◆ Denied Code Tables—Level 2–Level 6

Specifies the leading digits of toll restricted numbers for each level.

Default
Not stored.

Value Range
Max. 16 digits (consisting of 0–9, *, #, and X)

Maintenance Console Location
9.1 [7-1] Denied Code

9.2 [7-2] Exception Code

Feature Manual References
17.1.6 TRS (Toll Restriction)
9.2 [7-2] Exception Code

Toll Restriction (TRS) prohibits an extension from making certain CO line calls. Each time mode of every COS is assigned one of the seven TRS levels. TRS level 7 provides the maximum restriction (all CO line calls are prohibited) and level 1 provides the minimum (all CO line calls are allowed). TRS levels 2–6 are used to restrict calls according to the codes programmed in the Denied Code Tables in 9.1 [7-1] Denied Code and Exception Code Tables here. A call denied by the applicable Denied Code Tables is checked against the applicable Exception Code Tables, and if a match is found, the call is made. A maximum of 100 exception codes can be programmed for each level. 20 codes are displayed at a time. To display other sets of codes, click the applicable tab.

◆ Exception Code Tables—Level 2–Level 6

Specifies the leading digits of the numbers to be exempted from Toll Restriction for each level.

Default
Not stored.

Value Range
Max. 16 digits (consisting of 0–9, *, #, and X)

Feature Manual References
17.1.6 TRS (Toll Restriction)
9.3 [7-3] Special Carrier

If the PBX has access to multiple telephone companies, a Special Carrier Access Code is required each time a CO line call is made. By programming these Special Carrier Access Codes here, Toll Restriction (TRS) can restrict or allow calls to be made by ignoring the codes and looking at the telephone number only. If a Special Carrier Access Code is found in the dialed number, TRS will look only at the following digits.

A maximum of 20 (with the KX-TDA50/KX-TDA100/KX-TDA200) or 100 (with the KX-TDA600) Special Carrier Access Codes can be programmed. With the KX-TDA600, 20 codes are displayed at a time. To show other sets of codes, click the applicable tab.

◆ Special Carrier Access Code

Specifies a Special Carrier Access Code. Special Carrier Access Codes and Host PBX Access codes should be unique.

Default
Not stored.

Value Range
Max. 16 digits (consisting of 0–9, *, and #)

9.5 [7-5] Miscellaneous

Toll Restriction (TRS) prohibits an extension from making certain CO line calls. The following optional settings can be programmed to activate a TRS check, override TRS, or switch between TRS methods.

- **TRS Override by System Speed Dialing**
  Enables an outgoing CO line call to override TRS when the call is made using System Speed Dialing.

  **Default**
  Enable

  **Value Range**
  Disable, Enable

- **TRS Check for Dial "* #"**
  Enables a TRS check for the user-dialed "*" and ">#". This is useful in preventing unauthorized calls which could possibly be made through certain telephone company exchanges.

  **Default**
  No Check

  **Value Range**
  No Check, Check

Section 11

[9] Private Network
11.1 [9-1] TIE Table

A TIE line is a privately leased communication line between two or more PBXs, which provides cost effective communications between company members at different locations. A maximum of 32 TIE Line Routing and Modification Tables can be programmed. It is necessary to make unified tables with all PBXs at different locations in a TIE line network in order to identify the CO line route to be used when an extension makes or receives a TIE line call.

There are two types of routing methods: the Extension Number Method, where all extensions in the network are given a unique extension number; and the PBX Code Method, where each PBX is given a unique code, which is dialed before the extension number to call an extension at another PBX.

Two priority sets (from a total of 8) are displayed at a time. To display other priority sets, click the applicable tab.

Using a private network, up to 8 PBXs can share one VPS (centralized VM) connected to another PBX. This VPS can provide voice mail for extensions attached to any of the PBXs in the network.

◆ Own PBX Code

Specifies the PBX code of the local PBX, when using PBX Code Method numbering on a TIE line network. If this cell is left empty, the Extension Number Method is used.

Default
Not stored.

Value Range
Max. 7 digits (consisting of 0–9)

13.1.14 Private Network Features—Centralized Voice Mail
11.2 [9-2] Network Data Transmission

Settings related to the transmission of extension BLF (Busy Line Field) data or Message Waiting notifications over a network of PBXs can be programmed. Extension BLF data is used to show the status of a monitored extension attached to another PBX on a Network DSS (NDSS) button. Network Message Waiting notifications are used for the Centralized VM feature, and a VPS can send notifications to extensions connected to any PBX in the network.

Network Data Transmission for Centralized Operator Feature—Network PBX ID

Specifies the Network ID of the PBX, for Network Direct Station Selection (NDSS). This parameter must be set in correspondence with the Network IDs assigned to other PBXs in the network. Network IDs 1-8 can only be assigned to one PBX each within a network. Assigning the same Network ID to two PBXs will cause network data transmission problems. Changing this value in Interactive mode will automatically clear any NDSS Link Data.

**Default**
0

**Value Range**
0: The PBX retransmits BLF data sent by other PBXs.
1: The PBX receives BLF data sent by other PBXs.
2–8: The PBX transmits BLF data over the network.

11.3 [9-3] Network Operator (VoIP)

This screen allows network operators to be programmed. A network operator is an extension at a remote PBX that will monitor other PBX extensions using Network Direct Station Selection (NDSS). The settings on this screen should be programmed at the PBX that is to be monitored (Network Data Transmission for Centralized Operator Feature—Network PBX ID 2–8). Up to 8 network operators can be programmed.

◆ Network Operator Extension No.

Specifies the number of an extension at the monitor PBX (the PBX whose Network Data Transmission for Centralized Operator Feature—Network PBX ID is set to 1 in 11.2 [9-2] Network Data Transmission). Any extension at the monitor PBX can be specified here.

Default
Not stored.

Value Range
Max. 16 digits (consisting of 0–9, *, and #)

7.1.1 GROUP FEATURES
12.2 [10-2] DIL Table & Port Settings

Direct In Line (DIL) or Direct Inward Dialing (DID) can be selected for each CO line as the method of distributing incoming CO line calls to certain destinations. For each CO line to which DIL distribution is set, different destinations can be programmed depending on the time mode (day/lunch/break/night). If desired, Calling Line Identification (CLI) distribution can be used in conjunction with DIL distribution.

For KX-TDA600, all supported cards are displayed in the Select Shelf & Slot list with their shelf and slot numbers. Select the card to program, or select "All" to display all matching cards.

**DIL**

For each CO line to which DIL distribution is set, different DIL destinations can be programmed depending on the time mode (day/lunch/break/night). Generally, DIL distribution is used for CO line calls from analog CO lines. Tenant number and VM trunk group number can also be programmed for each CO line.

To assign DIL destination numbers, enter directly or click Destination Setting (see 2.1.6 Extension Number Setting).

4.1.5 DID (Direct Inward Dialing)
13.1.13 PRIVATE NETWORK FEATURES
12.3 [10-3] DID Table

Incoming CO line calls with DID numbers can be distributed to specific destinations. Each DID number has a destination programmed for each time mode (day/lunch/break/night). When CLI distribution is enabled for a DID number, incoming CO line calls with that DID number will be distributed to the CLI destinations (instead of the DID destinations) if the caller’s identification number is found in the System Speed Dialing Table, which is used as the Caller ID Table. CLI distribution can be enabled or disabled for each time mode (day/lunch/break/night) on a DID number basis.

A maximum of 1000 DID numbers can be programmed with other related parameters. 100 numbers are displayed at a time. To display other sets of numbers, click the applicable tab. To assign DID destination numbers, enter directly or click Destination Setting (see 2.1.6 Extension Number Setting). It is possible to program DID numbers and DID destinations in each time mode (day/lunch/break/night) for a set of locations in series at once by clicking Automatic Registration, or to program DID names for a set of locations in series at once by clicking Name Generate.

◆ DID Number

   Specifies the DID number.

Station Message Detail Recording (SMDR) automatically records detailed information about incoming and outgoing calls.

◆ **SMDR Format—Type**

Selects the format of SMDR output.

- **Default**
  Type A

- **Value Range**
  Type A: 80 digits without call charge information
  Type B: 80 digits with call charge information
  Type C: 120 digits

**Maintenance Console Location**

**Programming Manual References**

None

**Feature Manual References**

16.1.1 SMDR (Station Message Detail Recording)

◆ **SMDR Format—Port**

Selects the Serial Interface (RS-232C) port that is used to output the SMDR data.

- **Default**
  RS-232C

- **Value Range**
  None, RS-232C

**Maintenance Console Location**

**Programming Manual References**

None

**Feature Manual References**

16.1.1 SMDR (Station Message Detail Recording)
◆ SMDR Format—Page Length (Number of Lines)
   Specifies the number of lines on a page of output paper. Match the SMDR output to the paper size being used in the printer.

   **Default**
   66

   **Value Range**
   4–99

   **Maintenance Console Location**

   **Programming Manual References**
   None

   **Feature Manual References**
   16.1.1 SMDR (Station Message Detail Recording)

◆ SMDR Format—Blank Footer Length (Number of Lines)
   Specifies the number of lines to be skipped at the end of every page. The number of lines for the skip perforation should be shorter than the page length.

   **Default**
   0

   **Value Range**
   0–95

   **Maintenance Console Location**

   **Programming Manual References**
   None

   **Feature Manual References**
   16.1.1 SMDR (Station Message Detail Recording)

◆ SMDR Format—Date Format
   Selects the printed date format.

   **Default**
   MM-DD-YY
Value Range
MM-DD-YY, DD-MM-YY, YY-MM-DD, YY-DD-MM

Maintenance Console Location

Programming Manual References
None

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)

◆ SMDR Format—Time Format (12H / 24H)
Selects whether times are displayed using the 12- or 24-hour format.

Default
12H

Value Range
12H, 24H

Maintenance Console Location

Programming Manual References
None

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)

◆ Print Information—Outgoing Call
Specifies whether the dialed digits of outgoing CO line calls are printed. Class of Service (COS) programming determines the printable records.

Default
Print

Value Range
No Print, Print

Maintenance Console Location
Programming Manual References
4.11 [2-7-1] Class of Service—COS Settings—CO & SMDR—Outgoing CO Call Printout (SMDR)

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)

◆ Print Information—Incoming Call
Specifies whether the information relating to incoming CO line calls, such as caller’s identification name and number, is printed.

Default
No Print

Value Range
No Print, Print

Maintenance Console Location

Programming Manual References
None

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)

◆ Print Information—Intercom Call
Specifies whether the dialed digits of outgoing intercom calls are printed.

Default
No Print

Value Range
No Print, Print

Maintenance Console Location

Programming Manual References
None

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)
◆ **Print Information—Log-in / Log-out**

Specifies whether the log-in/log-out status is printed.

**Default**
No Print

**Value Range**
No Print, Print

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
9.1.3 ICD Group Features—Log-in/Log-out
16.1.1 SMDR (Station Message Detail Recording)

◆ **Print Information—Hotel Room Status**

Selects whether check-in and check-out data is output on SMDR.

**Default**
No Print

**Value Range**
No Print, Print

**Maintenance Console Location**

**Programming Manual References**
8.2 [6-2] Hotel

**Feature Manual References**
16.1.1 SMDR (Station Message Detail Recording)
15.1.3 Room Status Control

◆ **Print Information—Error Log**

Specifies whether PBX error log information is output to SMDR.

**Default**
No Print
**Value Range**
No Print, Print

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
16.1.1 SMDR (Station Message Detail Recording)
10.1.4 Local Alarm Information

**SMDR Options**

**SMDR Options—ARS Dial**
Selects the type of the dialed number to be printed for a call with the ARS feature.

**Default**
Dial after ARS Modification

**Value Range**
Dial before ARS Modification: The user-dialed number
Dial after ARS Modification: The ARS modified number

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
1.1.3 ARS (Automatic Route Selection)
8.1.5 Host PBX Access Code (Access Code to the Telephone Company from a Host PBX)
16.1.1 SMDR (Station Message Detail Recording)

**SMDR Options—Caller ID Number & Name**
Selects the printing format of caller identifications for incoming CO line calls.

**Default**
Number

**Value Range**
None, Number, Name, Name + Number
**SMDR Options—DID Number & Name**

Selects the printing format of incoming CO line calls with a DID number.

**Default**

None

**Value Range**

None, Number, Name, Name + Number

---

**SMDR Options—Secret Dial**

Selects the printing format of calls with a secret dial. The secret dial conceals all or part of the dialed number. Note that selecting **Dial before ARS Modification** in **SMDR Options—ARS Dial** on this screen indicates the dialed numbers as dots regardless of this setting.

**Default**

Print "...." (Secret)

**Value Range**

Print "...." (Secret), Print Dialed Number
Feature Manual References
11.1.2 MEMORY DIALING FEATURES
16.1.1 SMDR (Station Message Detail Recording)

◆ SMDR Options—Condition Code "RC/VR"
   Specifies whether the time of receiving an incoming CO line call is printed.

   Default
   No Print

   Value Range
   No Print, Print

   Maintenance Console Location

Programming Manual References
None

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)

◆ SMDR Options—Condition Code "AN/VA"
   Specifies whether the time of answering an incoming CO line call is printed.

   Default
   No Print

   Value Range
   No Print, Print

   Maintenance Console Location

Programming Manual References
None

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)
◆ SMDR Options—Caller ID Modification

Specifies whether Caller ID numbers are recorded on SMDR as received (before being modified by the PBX) or after being modified.

Default
Before Modification

Value Range
Before Modification, After Modification

Maintenance Console Location

Programming Manual References
5.3 [3-1-3] Caller ID Modification

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)

RS-232C

◆ Communication—Baud Rate

Specifies the data transmission speed from the PBX to the printer or personal computer. To ensure stable transmission, when changing this setting to 57600 or 115200 bps, set ◆ Communication—Flow on this screen to Hardware.

Default
19200 bps

Value Range
2400 bps, 4800 bps, 9600 bps, 19200 bps, 38400 bps, 57600 bps, 115200 bps

Maintenance Console Location

Programming Manual References

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)

◆ Communication—NL Code

Specifies the NL (New Line) code for the printer or personal computer.
If the printer or personal computer automatically feeds lines with a carriage return, select CR (Carriage Return). If not, select CR + LF (Line Feed).

**Default**
CR + LF

**Value Range**
CR + LF, CR

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
16.1.1 SMDR (Station Message Detail Recording)

**Communication—Parity Bit**
Selects a parity bit code that indicates what type of parity is used to detect an error in the string of bits composing a character. Make an appropriate selection depending on the requirements of the printer or personal computer.

**Default**
None

**Value Range**
None, Mark, Space, Even, Odd

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
16.1.1 SMDR (Station Message Detail Recording)

**Communication—Word Length**
Specifies the number of bits in each byte of a character. When connecting the Maintenance Console to the PBX using an RS-232C cable, assign the following values to the Serial Interface (RS-232C) port of the PBX:

**Word Length**: 8 bit, **Parity Bit**: None, **Stop Bit**: 1 bit
**Notice**

Do not use the following combinations:

- **Word Length**: 8 bit, **Parity Bit**: Space, **Stop Bit**: 1 bit
- **Word Length**: 8 bit, **Parity Bit**: Mark, **Stop Bit**: 2 bit
- **Word Length**: 8 bit, **Parity Bit**: Space, **Stop Bit**: 2 bit

**Default**

8 bit

**Value Range**

7 bit, 8 bit

**Maintenance Console Location**

**Programming Manual References**

None

**Feature Manual References**

16.1.1 SMDR (Station Message Detail Recording)

◆ **Communication—Flow**

Enables the hardware flow control.

**Default**

None

**Value Range**

None, Hardware

**Maintenance Console Location**

**Programming Manual References**

None

**Feature Manual References**

None

◆ **Communication—Stop Bit**

Selects a stop bit code that indicates the end of a bit string which composes a character. Select an appropriate value depending on the requirements of the printer or personal computer.
Default
1 bit

Value Range
1 bit, 2 bit

Maintenance Console Location

None

Feature Manual References
16.1.1  SMDR (Station Message Detail Recording)

◆ External Modem Command—Automatic Initialization

Specifies the command to automatically initialize an external modem when it is plugged into the Serial Interface (RS-232C) port of the PBX.

Default
AT&F0Q0E0V1S0=1X0&D0

Value Range
Max. 30 characters

Maintenance Console Location

Programming Manual References
None

Feature Manual References
13.1.6  PC Programming

Specifies the command to manually initialize an external modem. The command specified here is controlled by PT system programming (External Modem Control [801]).

Default
Not stored.

Value Range
Max. 30 characters
Maintenance Console Location

Programming Manual References
None

Feature Manual References
13.1.6 PC Programming

Maintenance

Local Alarm Display—Extension 1, Extension 2
Specifies the extension numbers of PTs that will be notified by the PBX about local alarms. When the PBX detects a PBX error, the System Alarm button on the PT turns on red. When this button is pressed, the display will show the error number, and the button light will turn off automatically.

Default
Not stored.

Value Range
Max. 5 digits (consisting of 0–9)

Maintenance Console Location

Programming Manual References
None

Feature Manual References
10.1.4 Local Alarm Information

Daily Test Start Time—Set
Enables the daily self check of the PBX for local alarm and error log.

Default
Disable

Value Range
Disable, Enable

Maintenance Console Location
Daily Test Start Time—Hour

Specifies the hour of the PBX daily self check start time.

Default
0

Value Range
0–23

Maintenance Console Location

Daily Test Start Time—Minute

Specifies the minute of the PBX daily self check start time.

Default
0

Value Range
0–59

Maintenance Console Location
◆ Error Log for Centralized VM—Network MSW Transmission (Counter)
Enables error information to be logged in the PBX if network message waiting information is deleted after re-transmission is repeated for the number of times specified in ◆ Network MSW Data Transmission for Centralized VM Feature—Data Re-transmission : Repeat Counter in 11.2 [9-2] Network Data Transmission.

Default
Disable

Value Range
Disable, Enable

Programming Manual References
11.1 [9-1] TIE Table— ◆ Enhanced QSIG Call Information (Activation Key Required)  
11.2 [9-2] Network Data Transmission— ◆ Network MSW Data Transmission for Centralized VM Feature— Data Re-transmission : Repeat Counter

Feature Manual References
13.1.14 Private Network Features—Centralized Voice Mail

◆ Error Log for Centralized VM—Network MSW Transmission (Buffer)
Enables error information to be logged in the PBX if the quantity of network message waiting information being re-transmitted is larger than the transmission buffer.

Default
Disable

Value Range
Disable, Enable

Maintenance Console Location

Programming Manual References
11.1 [9-1] TIE Table— ◆ Enhanced QSIG Call Information (Activation Key Required)

Feature Manual References
13.1.14 Private Network Features—Centralized Voice Mail
**Remote**

◆ **Remote—Analog Remote (Modem) Floating Extension Number**

Specifies the floating extension number for analog remote maintenance. To enable this setting, an RMT card must be installed, and ◆ **Remote—Remote Programming** on this screen must be enabled.

**Default**
599

**Value Range**
Max. 5 digits (consisting of 0–9)

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
13.1.6  PC Programming

◆ **Remote—Remote Programming**

Enables system programming, diagnosis, and data upload from a remote location.

**Default**
Enable

**Value Range**
Disable, Enable

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
13.1.6  PC Programming

◆ **Remote—Password Lock Counter for Remote Programming**

Specifies the number of successive incorrect password entries allowed before remote access is locked.

**Default**
None
Value Range

None, 1–15

Maintenance Console Location

Programming Manual References

None

Feature Manual References

13.1.6 PC Programming

Remote—Remote Maintenance Dial Number (Own Telephone number for reference)

Specifies the telephone number of the PBX used to access the PBX from a remote location for maintenance purposes. This number can be specified by Quick Setup.

Default

Not stored.

Value Range

Max. 32 digits (consisting of 0–9, *, and #)

Maintenance Console Location

Programming Manual References

None

Feature Manual References

14.1.2 Quick Setup

Password

Passwords authorize the user to program the extension and the PBX by a PT or a personal computer.

System Password - PT Programming—Prog ** : User Level

Specifies the user level system password to authorize the PT user to access only the permitted system programming.

Default

1234
**System Password - PT Programming—Prog *#: Administrator Level**

Specifies the administrator level system password to authorize the PT user to access all system programming.

**Default**
1234

**Value Range**
4–10 digits (consisting of 0–9, *, and #)

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
13.1.29  PT Programming

**Manager Password - PT Programming—Prog *1**

Specifies the manager password to authorize the PT user to access manager programming.

**Default**
1234

**Value Range**
4–10 digits (consisting of 0–9, *, and #)

**Maintenance Console Location**
Programming Manual References
None

Feature Manual References
11.1.1 Manager Features

◆ System Password - PC Programming—User Level
Specifies the system password used to access the Maintenance Console at User Level. This password can only be set in Interactive mode.

Default
1234

Value Range
4–10 digits (consisting of 0–9)

Maintenance Console Location

Programming Manual References

Value Range
4–10 digits (consisting of 0–9)

Maintenance Console Location

Programming Manual References
None

Feature Manual References
13.1.6 PC Programming
◆ **System Password - PC Programming—Installer Level**

Specifies the system password used to access the Maintenance Console at Installer Level. This password can only be set in Interactive mode.

**Default**

1234

**Value Range**

4–10 digits (consisting of 0–9)

**Maintenance Console Location**

**Programming Manual References**

None

**Feature Manual References**

13.1.6 PC Programming

The programming items accessible at User and Administrator level can be specified. 100 programming item numbers are displayed at a time. To display other sets of numbers, click the applicable tab.

◆ Program Number

Indicates the programming item number (reference only).

**Default**
Current programming item number

**Value Range**
000–999

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
13.1.29 PT Programming

◆ PROG**

Selects whether User Level PT users can access each system programming item.

**Default**
000–009, 020–099: Enable
010–019, 100–999: Disable

**Value Range**
Disable, Enable

**Maintenance Console Location**

**Programming Manual References**
None

**Feature Manual References**
13.1.29 PT Programming
13.3 [11-3] Power Failure Transfer (KX-TDA100/ KX-TDA200/KX-TDA600 only)

When the power supply to the PBX fails, power failure transfer (PFT) switches the current connections to Auxiliary Connections, so that certain SLTs and CO lines can be connected. Auxiliary Connections allow CO line calls to be made during a power failure. Up to 6 pairs of CO line cards and extension cards that are physically connected by RJ11 cable can be specified. The conversations through the lines specified here will be maintained even when the power returns.

For the KX-TDA600, select the shelf for which to set connections from the Shelf list. Note that PFT connections can only be made within the same shelf.

◆ Trunk Card Slot No.
   Specifies the position of the CO line card to be used.

   Default
   Current slot number

   Value Range
   None, 1–11

◆ Extension Card Slot No.
   Specifies the position of the extension card to be used.

   Default
   Current slot number

   Value Range
   None, 1–11

- 6.18 [4-3] DSS Console—Type
  - SMDR—Print Information—Error Log
  - Maintenance—Local Alarm Display—Extension 1, Extension 2
  - Maintenance—Daily Test Start Time—Set
  - Maintenance—Daily Test Start Time—Hour
  - Maintenance—Daily Test Start Time—Minute
Feature Manual References
10.1.4 Local Alarm Information

Manager Features
- 4.11 [2-7-1] Class of Service—COS Settings—Programming & Manager—Manager

Feature Manual References
11.1.1 Manager Features

Message Waiting
- 3.4 [1-1] Slot—Card Property - Extension Type—SLT Power Supply (KX-TDA100/KX-TDA200/KX-TDA600 only)
- 4.8 [2-6-1] Numbering Plan—Main—Features—Message Waiting Set / Cancel / Call Back
- 4.10 [2-6-3] Numbering Plan—B/NA DND Call Feature—Message Waiting Set
- 4.17 [2-9] System Options
  - Option 3—Distinctive Dial Tone
  - Option 5—SLT—Message Waiting Lamp Pattern (KX-TDA100/KX-TDA200/KX-TDA600 only)
- 5.21 [3-8-1] VM(DTMF) Group—System Settings—VM DTMF Command—Listening Message
- 6.1 [4-1-1] Wired Extension—Extension Settings—Option 8—SLT MW Mode (KX-TDA100/KX-TDA200/KX-TDA600 only)
- 6.5 [4-1-4] Wired Extension—Flexible Button—Type
- 6.13 [4-2-3] Portable Station—Flexible Button—Type
- 6.18 [4-3] DSS Console—Type

Feature Manual References
11.1.3 Message Waiting

Music on Hold
- 4.3 [2-2] Operator & BGM
  - BGM and Music on Hold—Music Source of BGM2 (KX-TDA100/KX-TDA200/KX-TDA600 only)
  - BGM and Music on Hold—Music Source of BGM (KX-TDA50 only)
  - BGM and Music on Hold—Music on Hold
  - MOH—MOH 1 (Music On Hold 1) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  - MOH—MOH 2 (Music On Hold 2) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  - MOH—MOH (Music On Hold) (KX-TDA50 only)

Feature Manual References
11.1.4 Music on Hold
Off-hook Monitor

- 4.17 [2-9] System Options—Option 1— ◆ PT Operation—Off Hook Monitor for KX-T74xx/T76xx

Feature Manual References

12.1.1 Off-hook Monitor

OGM (Outgoing Message)

- 2.6.6 Utility—Message File Transfer PC to PBX
- 2.6.7 Utility—Message File Transfer PBX to PC
- 4.8 [2-6-1] Numbering Plan—Main—Features—◆ OGM Record / Clear / Playback
- 5.14 [3-5-2] Incoming Call Distribution Group—Queuing Time Table—◆ Queuing Sequence—Sequence 01–16
- 7.4 [5-3-2] Voice Message—DISA Message—◆ Floating Extension Number
- 5.13 [3-5-1] Incoming Call Distribution Group—Group Settings—Member List—◆ Delayed Ring

Feature Manual References

12.1.2 OGM (Outgoing Message)

OHCA (Off-hook Call Announcement)

- 4.10 [2-6-3] Numbering Plan—B/NA DND Call Feature
  - ◆ BSS / OHCA / Whisper OHCA / DND Override
  - ◆ BSS / OHCA / Whisper OHCA / DND Override-2
- 4.11 [2-7-1] Class of Service—COS Settings—CO & SMDR—◆ OHCA / Whisper OHCA

Feature Manual References

12.1.3 OHCA (Off-hook Call Announcement)

One-touch Dialing

- 6.5 [4-1-4] Wired Extension—Flexible Button
  - ◆ Type
  - ◆ Dial (for One-touch)
- 6.10 [4-2-1] Portable Station—Extension Settings—Option 6—◆ Flexible Button Programming Mode
- 6.13 [4-2-3] Portable Station—Flexible Button
  - ◆ Type
  - ◆ Dial (for One-touch)
- 6.18 [4-3] DSS Console
  - ◆ Type
  - ◆ Dial (for One-touch)
Feature Manual References

12.1.4 One-touch Dialing

Operator Features

• 4.3 [2-2] Operator & BGM— Operator (Extension Number)
• 8.6 [6-6] Tenant— Operator (Extension Number)

Feature Manual References

12.1.5 Operator Features

Paging

• 4.8 [2-6-1] Numbering Plan—Main—Features
  – ◆ Group Paging
  – ◆ Group Paging Answer
  – ◆ Paging Deny Set / Cancel
• 4.17 [2-9] System Options
  – Option 1—◆ PT Fwd / DND—Paging to DND Extension
  – Option 3—◆ Confirmation Tone—Tone 2 : Paged / Automatic Answer
• 4.19 [2-11-1] Audio Gain—Paging/MOH
  – ◆ Paging—EPG 1 (External Pager 1) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  – ◆ Paging—EPG 2 (External Pager 2) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  – ◆ Paging—EPG (External Pager) (KX-TDA50 only)
  – ◆ Paging—Paging Level from PT Speaker
• 5.9 [3-4] Paging Group
• 5.10 [3-4] Paging Group—All Setting
• 5.11 [3-4] Paging Group—External Pager
• 6.1 [4-1-1] Wired Extension—Extension Settings—Option 6—◆ Paging Deny

Feature Manual References

13.1.1 Paging

Paralleled Telephone

• 3.4 [1-1] Slot—Card Property - Extension Type—◆ APT/SLT Parallel Ring
• 3.5 [1-1] Slot—Port Property - Extension Port
  – ◆ XDP Mode
  – ◆ Parallel Telephone Ringing
• 4.8 [2-6-1] Numbering Plan—Main—Features—◆ Parallel Telephone (Ring) Mode Set / Cancel

Feature Manual References

13.1.2 Paralleled Telephone
Password Security
• 2.1.2 Access Levels

Feature Manual References
13.1.3 Password Security

Pause Insertion
• 3.11 [1-1] Slot—Port Property - LCO Port—Pause Time
• 3.17 [1-1] Slot—Port Property - T1 Port (KX-TDA100/KX-TDA200/KX-TDA600 only)—Pause Time
• 4.4 [2-3] Timers & Counters—Miscellaneous—During Conversation—Pause Signal Time
• 8.4 [6-4] Second Dial Tone

Feature Manual References
13.1.4 Pause Insertion

PC Console/PC Phone
• 3.5 [1-1] Slot—Port Property - Extension Port
  – DPT Type—Type
  – DPT Type—Location No.

Feature Manual References
13.1.5 PC Console/PC Phone

PC Programming
• 13.1 [11-1] Main
  – Password—System Password - PC Programming—User Level
  – Password—System Password - PC Programming—Administrator Level
  – Password—System Password - PC Programming—Installer Level

Feature Manual References
13.1.6 PC Programming

PDN (Primary Directory Number)/SDN (Secondary Directory Number) Extension
• 4.11 [2-7-1] Class of Service—COS Settings—PDN/SDN (KX-TDA100/KX-TDA200/KX-TDA600 only)
• 4.17 [2-9] System Options—Option 4—System Wireless—SDN Delayed Ringing with LCD (KX-TDA100/KX-TDA200/KX-TDA600 only)
• 6.5 [4-1-4] Wired Extension—Flexible Button
  – Type
  – Parameter Selection (for SDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  – Ext. No. / Floating Ext. No. (for SDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)
– ◆ Optional Parameter (Ringing Tone Type Number) (for Loop CO, Single CO, Group CO, ICD Group, SDN)

• 6.13 [4-2-3] Portable Station—Flexible Button
  – ◆ Type
  – ◆ Parameter Selection (for SDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  – ◆ Ext. No. / Floating Ext. No. (for SDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)

• 6.18 [4-3] DSS Console
  – ◆ Type
  – ◆ Parameter Selection (for SDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  – ◆ Ext. No. / Floating Ext. No. (for SDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  – ◆ Optional Parameter (Ringing Tone Type Number) (for Loop CO, Single CO, Group CO, ICD Group, SDN)

Feature Manual References
13.1.7 PDN (Primary Directory Number)/SDN (Secondary Directory Number) Extension

Power Failure Transfer
• 13.3 [11-3] Power Failure Transfer (KX-TDA100/KX-TDA200/KX-TDA600 only)

Feature Manual References
13.1.9 Power Failure Transfer

Printing Message
• 4.8 [2-6-1] Numbering Plan—Main—Features—◆ Printing Message
• 8.2 [6-2] Hotel—Main—◆ SMDR for External Hotel Application 2—Printing Message 1–8

Feature Manual References
13.1.11 Printing Message

Privacy Release
• 4.17 [2-9] System Options—Option 1—◆ PT Operation—Privacy Release by SCO key
• 6.5 [4-1-4] Wired Extension—Flexible Button—◆ Type
• 6.13 [4-2-3] Portable Station—Flexible Button—◆ Type
• 6.18 [4-3] DSS Console—◆ Type

13.1.19 Private Network Features—QSIG—CCBS (Completion of Calls to Busy Subscriber)

Private Network Feature—QSIG—CF (Call Forwarding)

- 3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)—Supplementary Service—COLP, CLIR, COLR, CNIP, CONP, CNIR, CONR, CF (Rerouting), CT, CCBS, E911

Feature Manual References

13.1.20 Private Network Features—QSIG—CF (Call Forwarding)

Private Network Features—QSIG—CLIP/CLOP (Calling/Connected Line Identification Presentation) and CNIP/CONP (Calling/Connected Name Identification Presentation)

- 3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)—Supplementary Service—COLP, CLIR, COLR, CNIP, CONP, CNIR, CONR, CF (Rerouting), CT, CCBS, E911

- 4.8 [2-6-1] Numbering Plan—Main—Features
  - COLR Set / Cancel
  - CLIR Set / Cancel

- 6.1 [4-1-1] Wired Extension—Extension Settings—Main
  - Extension Number
  - Extension Name

- 6.10 [4-2-1] Portable Station—Extension Settings—Main
  - Extension Number
  - Extension Name

Feature Manual References

13.1.19 Private Network Features—QSIG—CCBS (Completion of Calls to Busy Subscriber)

Private Network Features—QSIG—CT (Call Transfer)

- 3.14 [1-1] Slot—Port Property - PRI Port (KX-TDA100/KX-TDA200/KX-TDA600 only)—Supplementary Service—COLP, CLIR, COLR, CNIP, CONP, CNIR, CONR, CF (Rerouting), CT, CCBS, E911

Feature Manual References

13.1.22 Private Network Features—QSIG—CT (Call Transfer)
Private Network Features—VoIP (Voice over Internet Protocol) Network

- 3.23 [1-1] Slot—Card Property - IP Extension—Common Settings—Gateway Address

Feature Manual References
13.1.23 Private Network Features—VoIP (Voice over Internet Protocol)

PS (Portable Station)

- 3.34 [1-2] Portable Station

Feature Manual References
13.1.24 PS (Portable Station)

PS—CO Status Display (KX-WT125/KX-WT126 only) (KX-TDA50 only)

- 3.35 [1-3] Option—System Wireless—CO Status Display in Standby (KX-WT125/126 only) (Need System Restart) (KX-TDA50 only)
- 6.17 [4-2-6] Portable Station—Single CO Appearance (KX-TDA50 only)

Feature Manual References
13.1.25 PS—CO Status Display (KX-WT125/KX-WT126 only) (KX-TDA50 only)

PS—Directory

- 6.1 [4-1-1] Wired Extension—Extension Settings—Main—Extension Name
- 6.10 [4-2-1] Portable Station—Extension Settings—Main—Extension Name
- 8.1 [6-1] System Speed Dial
  - ◆ Name
  - ◆ CO Line Access Number + Telephone Number

Feature Manual References
13.1.26 PS—Directory

PS—Ring Group

- 5.12 [3-5-1] Incoming Call Distribution Group—Group Settings—Main—Distribution Method
- 5.24 [3-9] PS Ring Group
- 5.25 [3-9] PS Ring Group—Member List

Feature Manual References
13.1.28 PS—Ring Group

PT Programming

- 4.11 [2-7-1] Class of Service—COS Settings—Programming & Manager—Programming Mode Level
14.2 Feature Programming References

  - System Password - PT Programming—Prog ** : User Level
  - System Password - PT Programming—Prog *#: Administrator Level
  - Manager Password - PT Programming—Prog *1

Feature Manual References
13.1.29 PT Programming

Q

Quick Dialing
- 4.9 [2-6-2] Numbering Plan—Quick Dial

Feature Manual References
14.1.1 Quick Dialing

R

Redial, Last Number
  - Automatic Redial—Repeat Counter (KX-TDA100/KX-TDA200/KX-TDA600 only)
  - Automatic Redial—Redial Call Ring Duration (KX-TDA100/KX-TDA200/KX-TDA600 only)
  - Automatic Redial—Analog CO Mute / Busy Detection Timer (KX-TDA100/KX-TDA200/KX-TDA600 only)
- 4.8 [2-6-1] Numbering Plan—Main—Features—Redial
- 4.17 [2-9] System Options—Option 2
  - Redial—Automatic Redial when No Answer (ISDN) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  - Redial—Save Dial After Connection to Redial Memory
  - Redial—Call Log by Redial key
- 6.1 [4-1-1] Wired Extension—Extension Settings—Option 7—Outgoing Call Log Memory
- 6.10 [4-2-1] Portable Station—Extension Settings—Option 7—Outgoing Call Log Memory

Feature Manual References
15.1.1 Redial, Last Number

Ring Tone Pattern Selection
- 4.14 [2-8-1] Ring Tone Patterns—Call from CO—Ring Tone Pattern Plan 1–8
- 4.15 [2-8-2] Ring Tone Patterns—Call from Doorphone—Ring Tone Pattern Plan 1–8
- 4.16 [2-8-3] Ring Tone Patterns—Call from Others—Extension—Ring Tone Pattern Plan 1–8
- 4.17 [2-9] System Options—Option 1—PT Operation—PT Ring Off Setting
- 6.1 [4-1-1] Wired Extension—Extension Settings—Option 1—Ring Pattern Table
- 6.10 [4-2-1] Portable Station—Extension Settings—Option 1—Ring Pattern Table
Feature Manual References
15.1.2 Ring Tone Pattern Selection

Room Status Control

- 6.5 [4-1-4] Wired Extension—Flexible Button—◆ Type
- 6.18 [4-3] DSS Console—◆ Type
- 8.2 [6-2] Hotel—Main—◆ Hotel Operator—Extension 1–4

Feature Manual References
15.1.3 Room Status Control

S

SMDR (Station Message Detail Recording)

- 4.11 [2-7-1] Class of Service—COS Settings—CO & SMDR—◆ Outgoing CO Call Printout (SMDR)
- 8.2 [6-2] Hotel
  - Main—◆ SMDR for External Hotel Application 2—Printing Message 1–8
  - SMDR
  - SMDR Options
  - RS-232C—◆ Communication—Baud Rate
  - RS-232C—◆ Communication—NL Code
  - RS-232C—◆ Communication—Parity Bit
  - RS-232C—◆ Communication—Word Length
  - RS-232C—◆ Communication—Flow
  - RS-232C—◆ Communication—Stop Bit

Feature Manual References
16.1.1 SMDR (Station Message Detail Recording)

Special Carrier Access Code

- 9.3 [7-3] Special Carrier

Feature Manual References
16.1.2 Special Carrier Access Code

Speed Dialing—Personal

- 4.8 [2-6-1] Numbering Plan—Main—Features
  - ◆ System Speed Dialing / Personal Speed Dialing
  - ◆ Personal Speed Dialing - Programming
- 6.4 [4-1-3] Wired Extension—Speed Dial
Feature Manual References
16.1.3 Speed Dialing, Personal

Speed Dialing—System

- 4.8 [2-6-1] Numbering Plan—Main—Features—System Speed Dialing / Personal Speed Dialing
- 4.11 [2-7-1] Class of Service—COS Settings—TRS—TRS Level for System Speed Dialing
- 8.1 [6-1] System Speed Dial
- 8.6 [6-6] Tenant—System Speed Dial

Feature Manual References
16.1.4 Speed Dialing, System

SVM (Simplified Voice Message)

- 2.5.4 Tool—Simplified Voice Message—Delete All Recording
- 2.5.5 Tool—Simplified Voice Message—Check Current Usage
- 4.4 [2-3] Timers & Counters—Miscellaneous
  - SVM—Recording Time
  - SVM—Dial Tone Continuous Time
- 4.8 [2-6-1] Numbering Plan—Main—Features—Simplified Voice Message Access
- 5.1 [3-1-1] Trunk Group—TRG Settings—Tone Detection
  - Simplified Voice Message Tone Detection—Silence
  - Simplified Voice Message Tone Detection—Continuous
  - Simplified Voice Message Tone Detection—Cyclic
- 6.9 [4-1-7] Wired Extension—Simplified Voice Message
- 6.10 [4-2-1] Portable Station—Extension Settings—Option 6—SVM Lock
- 6.16 [4-2-5] Portable Station—Simplified Voice Message
- 7.3 [5-3-1] Voice Message—DISA System
  - Recording Mode
  - Remote Access
- 7.5 [5-3-3] Voice Message—SVM

Feature Manual References
16.1.5 SVM (Simplified Voice Message)

T1 Line Service

- 3.17 [1-1] Slot—Port Property—T1 Port (KX-TDA100/KX-TDA200/KX-TDA600 only)
- 3.18 [1-1] Slot—Port Property—Connection Command (KX-TDA100/KX-TDA200/KX-TDA600 only)

Feature Manual References
17.1.1 T1 Line Service
TAFAS (Trunk Answer From Any Station)

- 4.8 [2-6-1] Numbering Plan—Main—Features—◆ TAFAS Answer
  - ◆ Paging—EPG 1 (External Pager 1) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  - ◆ Paging—EPG 2 (External Pager 2) (KX-TDA100/KX-TDA200/KX-TDA600 only)
  - ◆ Paging—EPG (External Pager) (KX-TDA50 only)
- 7.2 [5-2] External Pager

Feature Manual References
17.1.2 TAFAS (Trunk Answer From Any Station)

Tenant Service

- 4.3 [2-2] Operator & BGM
  - ◆ PBX Operator—Day, Lunch, Break, Night
  - ◆ BGM and Music on Hold—Music on Hold
- 4.5 [2-4] Week Table
- 4.7 [2-5] Holiday Table
- 4.13 [2-7-3] Class of Service—Internal Call Block
- 5.6 [3-2] Extension Group
- 5.12 [3-5-1] Incoming Call Distribution Group—Group Settings—Main—◆ Tenant Number
- 6.1 [4-1-1] Wired Extension—Extension Settings—Main—◆ Extension Group
- 6.10 [4-2-1] Portable Station—Extension Settings—Main—◆ Extension Group
- 7.1 [5-1] Doorphone—◆ Tenant Number
- 8.6 [6-6] Tenant
- Section 10 [8] ARS
- 12.2 [10-2] DIL Table & Port Settings—DIL—◆ Tenant Number
- 12.3 [10-3] DID Table—◆ Tenant Number

Feature Manual References
17.1.3 Tenant Service

Timed Reminder

  - ◆ Timed Reminder—Repeat Counter
  - ◆ Timed Reminder—Interval Time
  - ◆ Timed Reminder—Alarm Ringing Duration
- 4.8 [2-6-1] Numbering Plan—Main—Features
  - ◆ Remote Timed Reminder (Remote Wakeup Call)
  - ◆ Timed Reminder Set / Cancel
- 4.16 [2-8-3] Ring Tone Patterns—Call from Others—◆ Timed Reminder—Ring Tone Pattern Plan 1–8
- 4.17 [2-9] System Options—Option 1—◆ PT LCD—Time Display
- 8.2 [6-2] Hotel—Main—◆ SMDR for External Hotel Application 1—Timed Reminder (Wake-up Call)
Feature Manual References

17.1.4 Timed Reminder

Time Service

• 4.5 [2-4] Week Table
• 4.7 [2-5] Holiday Table
• 4.8 [2-6-1] Numbering Plan—Main—Features—Time Service (Day / Lunch / Break / Night) Switch
• 4.11 [2-7-1] Class of Service—COS Settings—Programming & Manager—Time Service Switch
• 6.5 [4-1-4] Wired Extension—Flexible Button
  – ◆ Type
  – ◆ Parameter Selection (for Time Service)
  – ◆ Parameter Selection (for Time Service - Automatic/Manual)
  – ◆ Optional Parameter (Ringing Tone Type Number) (for Time Service)
• 6.13 [4-2-3] Portable Station—Flexible Button
  – ◆ Type
  – ◆ Parameter Selection (for Time Service)
  – ◆ Parameter Selection (for Time Service - Automatic/Manual)
  – ◆ Optional Parameter (Ringing Tone Type Number) (for Time Service)
• 6.18 [4-3] DSS Console
  – ◆ Type
  – ◆ Parameter Selection (for Time Service)
  – ◆ Parameter Selection (for Time Service - Automatic/Manual)
  – ◆ Optional Parameter (Ringing Tone Type Number) (for Time Service)

Feature Manual References

17.1.5 Time Service

TRS (Toll Restriction)

• 4.11 [2-7-1] Class of Service—COS Settings—TRS
  – ◆ TRS Level—Day, Lunch, Break, Night
  – ◆ TRS Level for System Speed Dialing
• 6.1 [4-1-1] Wired Extension—Extension Settings—Main—COS
• 6.5 [4-1-4] Wired Extension—Flexible Button
  – ◆ Type
  – ◆ Parameter Selection (for TRS Level Change)
• 6.10 [4-2-1] Portable Station—Extension Settings—Main—COS
• 6.13 [4-2-3] Portable Station—Flexible Button
  – ◆ Type
  – ◆ Parameter Selection (for TRS Level Change)
• 6.18 [4-3] DSS Console
  – ◆ Type
  – ◆ Parameter Selection (for TRS Level Change)
• 9.1 [7-1] Denied Code
• 9.2 [7-2] Exception Code
• 9.3 [7-3] Special Carrier
• 9.5 [7-5] Miscellaneous
Feature Manual References
17.1.6 TRS (Toll Restriction)

U
Upgrading the Software
- 3.3 [1-1] Slot—Card Property - MPR—◆ Memory Version:

Feature Manual References
18.1.1 Upgrading the Software

V
Verification Code Entry
- 4.8 [2-6-1] Numbering Plan—Main—Features—◆ User Remote Operation / Walking COS / Verification Code
- 6.1 [4-1-1] Wired Extension—Extension Settings
  - Option 1—◆ ARS Itemized Code
- 6.10 [4-2-1] Portable Station—Extension Settings
  - Option 1—◆ ARS Itemized Code
- 8.3 [6-3] Verification Code

Feature Manual References
19.1.1 Verification Code Entry

Virtual PS
- 3.34 [1-2] Portable Station—◆ Registration

Feature Manual References
19.1.2 Virtual PS

Voice Mail (VM) Group
- 3.5 [1-1] Slot—Port Property - Extension Port—◆ DPT Type—Type
- 3.5 [1-1] Slot—Port Property - Extension Port—◆ DPT Type—VM Unit No.
- 3.5 [1-1] Slot—Port Property - Extension Port—◆ DPT Type—VM Port No.
- 5.18 [3-7-1] VM(DPT) Group—System Settings
- 5.19 [3-7-2] VM(DPT) Group—Unit Settings
- 5.21 [3-8-1] VM(DTMF) Group—System Settings
- 5.22 [3-8-2] VM(DTMF) Group—Group Settings

Feature Manual References
19.1.3 Voice Mail (VM) Group
Voice Mail DPT (Digital) Integration

- 5.18 [3-7-1] VM(DPT) Group—System Settings
- 5.19 [3-7-2] VM(DPT) Group—Unit Settings
- 6.1 [4-1-1] Wired Extension—Extension Settings—Option 4
  - LCS Recording Mode
  - LCS Answer Mode
- 6.5 [4-1-4] Wired Extension—Flexible Button
  - Type
  - Ext. No. / Floating Ext. No. (for Two-way Record)
  - Ext. No. / Floating Ext. No. (for Two-way Transfer)
  - Ext. No. / Floating Ext. No. (for Voice Mail Transfer)
  - Ext No. of Mailbox (for Two-way Transfer)
- 6.10 [4-2-1] Portable Station—Extension Settings—Option 4—LCS Recording Mode
- 6.13 [4-2-3] Portable Station—Flexible Button
  - Type
  - Ext. No. / Floating Ext. No. (for Two-way Record)
  - Ext. No. / Floating Ext. No. (for Two-way Transfer)
  - Ext. No. / Floating Ext. No. (for Voice Mail Transfer)
  - Ext No. of Mailbox (for Two-way Transfer)
- 6.18 [4-3] DSS Console
  - Type
  - Ext. No. / Floating Ext. No. (for Two-way Record)
  - Ext. No. / Floating Ext. No. (for Two-way Transfer)
  - Ext. No. / Floating Ext. No. (for Voice Mail Transfer)
  - Ext No. of Mailbox (for Two-way Transfer)
- 7.1 [5-1] Doorphone—VM Trunk Group Number
- 12.2 [10-2] DIL Table & Port Settings—DIL
  - Tenant Number
  - VM Trunk Group No.
- 12.3 [10-3] DID Table
  - Tenant Number
  - VM Trunk Group No.

Feature Manual References

Voice Mail DTMF Integration

- 4.4 [2-3] Timers & Counters—Miscellaneous—Voice Mail (Caller from VM to CO)—On-hook Wait Time
- 5.21 [3-8-1] VM(DTMF) Group—System Settings
- 5.22 [3-8-2] VM(DTMF) Group—Group Settings
- 6.5 [4-1-4] Wired Extension—Flexible Button
  - Type
  - Ext. No. / Floating Ext. No. (for Voice Mail Transfer)
- 6.10 [4-2-1] Portable Station—Extension Settings—Option 1—Programmed Mailbox No.
• 6.13 [4-2-3] Portable Station—Flexible Button
  – ◆ Type
  – ◆ Ext. No. / Floating Ext. No. (for Voice Mail Transfer)
• 6.18 [4-3] DSS Console
  – ◆ Type
  – ◆ Ext. No. / Floating Ext. No. (for Voice Mail Transfer)

Feature Manual References
19.1.5 Voice Mail DTMF Integration

W
Walking COS
• 4.8 [2-6-1] Numbering Plan—Main—Features—◆ User Remote Operation / Walking COS / Verification Code
• 4.11 [2-7-1] Class of Service—COS Settings—Optional Device & Other Extensions—◆ Remote Operation by Other Extension
• 6.1 [4-1-1] Wired Extension—Extension Settings—Main—◆ Extension PIN
• 6.10 [4-2-1] Portable Station—Extension Settings—Main—◆ Extension PIN

Feature Manual References
20.1.1 Walking COS

Walking Extension
• 4.8 [2-6-1] Numbering Plan—Main—Features—◆ Walking Extension
• 6.1 [4-1-1] Wired Extension—Extension Settings—Main—◆ Extension PIN
• 6.18 [4-3] DSS Console—◆ Pair Extension

Feature Manual References
20.1.2 Walking Extension

Whisper OHCA
• 4.10 [2-6-3] Numbering Plan—B/NA DND Call Feature
  – ◆ BSS / OHCA / Whisper OHCA / DND Override
  – ◆ BSS / OHCA / Whisper OHCA / DND Override-2
• 4.11 [2-7-1] Class of Service—COS Settings—Extension Feature—◆ OHCA / Whisper OHCA
• 4.17 [2-9] System Options—Option 5—◆ Whisper OHCA—for SLT / APT / KX-T72xx

Feature Manual References
20.1.3 Whisper OHCA

Wireless XDP Parallel Mode
• 3.5 [1-1] Slot—Port Property - Extension Port—◆ DPT Type—Type
14.2 Feature Programming References

- 3.34 [1-2] Portable Station—PS Registration and De-registration
- 4.8 [2-6-1] Numbering Plan—Main—Features—Wireless XDP Parallel Mode Set / Cancel
- 4.11 [2-7-1] Class of Service—COS Settings—Optional Device & Other Extensions—Accept Wireless XDP Parallel Mode Set by PS
- 6.1 [4-1-1] Wired Extension—Extension Settings—Option 1—Wireless XDP

Feature Manual References

20.1.4 Wireless XDP Parallel Mode
