PROFESSIONAL SANITARY TECHNOLOGY

Franke Water Systems merges innovative water management systems with high-quality sanitary room facilities. For more than 140 years our customers have been receiving customised product solutions for applications in public and commercial sanitary facilities. As the German base of Franke Water Systems, Franke Aquarotter serves as the competence centre for advanced fittings and system technology.

Merging economic success, social responsibility and ecologically sound actions is our mission. This high standard that we strive for is reflected in the various certifications, quality seals and test marks awarded to our products at both the national as well as the international level.

The responsible use of potable water and energy is at the focus of Franke activities. For years we have been supporting the VDMA campaign 'Blue Responsibility' and with our efficient products we stand for consistent sustainability.

For further information on these subjects please see: www.blue-responsibility.com
Where there are many people who have the same needs all at the same time it is easy to see who must take centre stage in our thinking and acting - that’s people!

To make sure that this guiding principle does not merely remain lip service, our harmonised product solutions support specifiers, clients and operators in their efforts to implement this idea. For users this means: easy to operate technical sanitary system solutions that guarantee the highest level of hygiene without having to abandon comfort and design.
FRANKE SANITARY TECHNOLOGY – STRONG IN APPLICATIONS

Strong in washing facilities
- Washbasin taps
- Washbasins made of stainless steel or mineral granite
- All-in-one washstations
- Accessory lines made of stainless steel
- Grab rail systems

Strong in shower facilities
- Shower fittings
- Shower heads, shower trays
- Chargeable water delivery
- Equipment for people with disabilities

Strong in flushing facilities
- Flush valves for urinals and toilets
- Toilets and urinals made of stainless steel
- Accessory lines
- Equipment for people with disabilities

Strong in special fields
- Security products
- Sanitary equipment for children’s facilities
- Wash troughs and cleaners sinks made of stainless steel
- Cleaning and workroom sinks made of mineral granite
- Industrial sinks
- Emergency showers

Sports centres
Swimming baths
Leisure centres
Education
Transportation
Security areas
Industry
Hotel, Restaurants
Culture
Public washrooms serving high rates of usage and a constantly changing group of people have an inherent number of problem areas. What do we do against water wastage, insufficient hygiene and vandalism? Product solutions by Franke Water Systems provide the answers. Thus, for example, automatic wash taps help to save water and energy. At the same time this method of operation ensures the best possible hygiene, because the tap needs to be touched only before washing hands or not at all. Practical experience shows that using high-quality, contamination-resistant materials for washing units creates a clean atmosphere and is the best contribution towards maintaining frequently used sanitary rooms.
The extensive range of solutions for washing facilities includes:

- Single lever mixers with thermostatic scald protection and hygiene options
- Hydraulically controlled self-closing taps, single mixers or thermostatic mixers
- Touch-free electronically controlled taps and mixing taps with opto-sensor
- All-in-one wash stations as free-standing solutions or for wall mounting
- Washbasins, multiple washing systems, wash troughs made of stainless steel or mineral material, also for accessible applications
- Tap units for multiple washing systems
- Design accessory lines made of stainless steel
- Accessible grab rail systems and accessories for users with disabilities
GREEN BUILDING – BUILDING OF THE FUTURE

A key objective of "green" buildings is the efficient use of water, energy and materials. Lowering the consumption of resources is a meaningful and successful method for reducing operating costs. Depending on the type and period of utilisation, it is necessary to take into account both different frequencies of usage as well as the anonymity of visitors.

Another important factor is that sanitary rooms in offices and administrative buildings will represent a company to the outside. Functionalism, neutrality, but also flair and exclusivity display the image that a company or institution stands for. Optimally conceived sanitary solutions help in planning a "green building".
Sanitary products used in publicly accessible WC facilities at railway stations and airports must be able to withstand severest conditions. The high rate of usage in combination with an ever changing circle of users makes hygiene an issue.

High-quality, sturdy washbasin taps and flush valves as well as accessories that are touch free, meet these challenges superbly. A bright and friendly design combined with a long service life and easy to clean surfaces support the clean appearance of these sanitary facilities. What remains is a good feeling – even in public washrooms.
Washrooms and toilet facilities in the hotel lobby, restaurant or spa area are the calling card of a hospitable institution.

Guests who feel comfortable here will also enjoy what else the hotel has to offer. Customised washing unit concepts designed to make optimum use of available space and niches facilitate pleasant furnishings that will be well remembered. Clarity, elegance and harmony, both in form as well as in material, establish a contemporary design - even in the WC. The combination of glass, light with aesthetically pleasing surfaces made of stainless steel and mineral granite create a distinctive flair and a high level of professionalism to sanitary rooms.

Easy-care surfaces, automatically operating fittings and accessories simultaneously contribute to a hygienic environment that can also handle occasionally large crowds of visitors.
After a hard day's physical work in an industrial or commercial business, employees first want to comfortably clean hands and body. Flexible, safe and user-friendly sanitary solutions are what is needed here. These show members of staff that their physical efforts for the company are being appreciated at this point too.

Both ease of use as well as economical operation should be considered already in the planning stage. Functionality, water and energy conserving products, low maintenance and servicing effort as well as cleanliness and good cleaning properties are key decision criteria.
Advanced fittings technology supports economical, hygienic and yet comfortable equipment in professional shower facilities. For example, in swimming or sports facilities a self-closing fitting will consume 1/3 less water than conventional shower equipment. When each fitting is used 50 times per day this means approx. 3,300 litres of water saved per year.

Besides functional reliability and economy, there is an ever increasing focus on ease of use as well as safety for shower users and the aspect of hygiene. Important functions such as the possibility to conduct thermal disinfection and have scald protection must be considered in the early stages of planning a facility.

We would like to support you with specific plannings and project consulting.
The range of fittings for shower facilities includes:

- Self-closing valves for pre-mixed warm water
- Self-closing single mixers with a choice of individual temperatures
- Self-closing thermostatic mixers with option for thermal disinfection
- Electronic fittings with touch sensor or Piezo pushbutton for pre-mixed warm water or with thermostat technology
- Shower heads, shower trays
- Multiple shower facilities
- Equipment for people with disabilities
CONTROLLED ENERGY CONSUMPTION

Users and operators of public swimming baths can rely on economical and yet comfortable product solutions for sanitary rooms without heavy consumption of water or energy. Franke's vandal-resisting and easy-to-clean sanitary equipment is well prepared to meet the challenge of a high volume of anonymous users. Uncompromising reliability and economy are key criteria when the issue is hygienic clean water.

Appropriate control features are provided by the AQUA 3000 intelligent water management system, which monitors and controls important water flow functions. Thanks to its innovative electronic platform, automatic thermal disinfection can be realised with network-capable fittings. (For further information see page 35)
Sturdy, durable and functional products are in high demand for the sanitary facilities of schools and sports halls. This does not mean that an appealing, timeless and harmonious design is then out of the question. A product combination of the latest fittings technology with trend-setting sanitary room equipment made of stainless steel and mineral granite is cut out for this application.

When, for example, sports halls are used by clubs during the afternoon, the authorities responsible for maintaining the school benefits from chargeable water delivery. This system makes operating shower facilities more economical, it saves valuable water and energy resources and makes cost accounting easier.
SANITARY SYSTEMS: STRONG IN FLUSHING FACILITIES

Public toilet facilities are generally not a pleasing location. The ideal combination for urinals and toilet facilities are optimum cleanliness, hygiene and no unpleasant odours. Frequently, however, not even one of these ideals can be found in toilet facilities.

This usually difficult area of application requires the use of absolutely reliable fittings such as pushbutton flush valves or advanced automatically controlled electronic valves. For sanitary facilities it is recommended to use urinals and toilet bowls made of easy to clean, durable stainless steel.
The range of products for flushing facilities includes:

- Touch-free electronic flush valves for automatically flushing urinals and toilets
- Electronic flush valves with Piezo pushbuttons for toilets
- Pushbutton flush valves for toilets and urinals
- Urinals and toilet bowls made of stainless steel
- Urinal dividers
- Accessory lines
NO COMPROMISE ON HYGIENE

The term 'restroom' is often quite out of place: Lack of cleanliness and sometimes crowds of people can turn public toilet facilities into a state of chaos. Only durable and stable equipment solutions can stand up to these problems. Maximum reliability, easy care and simple maintenance satisfy both users as well as operators.

From the planning stage onwards, it is important to consider the construction requirements and the hygienic needs, so that the publicly accessible toilet is then capable of handling large numbers of users.
NOT JUST CLEAN, BUT PURE

The hygienically sensitive areas in hospitals and care facilities require special attention in planning and design. Functionality, choice of materials and ease of cleaning sanitary room facilities are not only key factors from the patients' point of view, but also very important for medical staff. In both cases the stable washbasin material MIRANIT has proven itself time and again. This pore-free material is used for flexible surgery washbasins, for the VARIUSmed cleaning basin, the custom-tailored VARIUS Line washbasin solution with different bowl forms, supplemented by the VARIUScare accessible washbasin variants.

Various support rails and foldable grab rails, opto-electronic fittings, a wheelchair-accessible toilet and a wide range of accessories made of stainless steel, including touch-free versions, complement the Franke range of products for accessible washrooms and toilet facilities.
SAFETY FIRST

Nowhere is there such an anonymity of visitors in toilet facilities as in motorway service stations. The constantly changing circle of users increases the risk of dirtiness and vandalism. Reliability and hygiene can only be assured here by using exceptionally durable and easy to clean sanitary room fittings made of stainless steel and equipped with intelligent, touch-free water control.

Safety aspects are also at the focus when designing the equipment of sanitary rooms in prisons or similar institutions. Besides the risk of vandalism, appropriate sanitary facilities must be provided to counteract deliberate self harm or hiding of drugs and weapons. Durable fitting systems, in part developed specifically for prison applications, as well as stable stainless steel solutions are part of the Franke Safety Program.
SECURITY AREAS
LEARNING THROUGH PLAY

Children conquer their environment by trial and error. "Do it yourself," is the clear motto. Whether washing hands, brushing teeth or going to the toilet - independence must be learned, even playfully.

The ABC for sanitary equipment in nurseries and schools goes like this: active protection against scalding, the best possible means to avoid injuries and easy operation. Child-friendly design and ease of use support efforts of education in cleanliness and personal hygiene. Pleasant material surfaces make sanitary products a pleasant rounded-off experience, even for the youngest of us.

AQUA 3000 OPEN – WATER MANAGEMENT SYSTEM

Networking fittings intelligently - managing water efficiently.

The requirements for sanitary facilities used in heavy-traffic applications and security-related areas are growing steadily. The AQUA 3000 open Water Management System sets new standards with respect to system security, economy, user friendliness and hygiene in sanitary rooms.

Depending on the respective application of washing, showering or flushing, an intelligent electronic control system provides different control functions such as various statistical functions, simple setting of parameters, time-controlled hygiene flushing and automatic thermal disinfection.

In conjunction with the ECC function controllers (ECC = Ethernet Can Coupler) and the additional modules of the range of system accessories it is possible to integrate fittings into the AQUA 3000 open Water Management System. At this network level, innovative software developed by Franke provides the system with facilities to centrally control and manage any number of sanitary fittings. To facilitate data communication with host managed control and regulating functions, all A3000 open fittings must be connected to an ECC via the system cable and the T-junction. For a spatial subdivision within a building or for performing safe and effective hygiene options, it is useful to divide all ECC-connected fittings into groups.

AQUA 3000 open is a flexible sanitary system. Its components can be selected in a modular way and it can be individually adapted to the specific applications.

Depending on the type and the structure of a building, the way of use and the conditions are defined.

**SYSTEM LEVELS**

The AQUA 3000 open Water Management System is consistently divided into two levels

- Fittings
- Network

which communicate with each other via standardised data technology.

**SCOPE OF FUNCTIONS**

- Hygiene flushings
- Thermal disinfection programs
- Switching operation modes
- Cleaning switch-off
- System fault messages
- Statistic functions
- Sequential controls
- Connection to computer-aided facility management systems
- Mobile access via internet for remote maintenance of the plant
- Sending of fault messages via SMS to up to five recipients
STAINLESS STEEL – HIGH QUALITY MATERIAL

There are certainly good reasons why the use of stainless steel as a raw material for equipment in public and semi-public sanitary rooms has become standard. The material is durable, easy to clean and thus very economical. With vandalism-resisting and easy to clean sanitary facilities, operators can minimise their costs for maintenance and repairs.

Stainless steel is not only insensitive to moisture and most acids, but is characterised by hardness, toughness, high heat and cold tolerance as well as hygienic properties. Dirt and grease can be easily washed off from smooth, non-porous surfaces. Scratches and grooves loose their hard contours after a short time and match the overall surface appearance.

STAINLESS STEEL MATERIAL DESCRIPTION

Surfaces - an overview
Material number 1.4301 is used (AISI 304) in accordance with DIN EN 10088. The magic formula 18/10 stands for 18% chromium and up to 10% nickel. This combination gives the material its special material characteristics.

InoxPlus surface finishing
The high-quality line of accessories and XINOX washbasins as well as the front surfaces of STRATOS products are provided with their surfaces refined using the proven InoxPlus technology. With this technology, nano-particles intermesh with the molecules of the metal surface and cling tightly to the microscopic irregularities. The resulting ultra-fine structure makes fingerprints almost invisible. The sanitary room thus remains clean longer and cleaning is much easier.
Sanitary products made of resin-bonded mineral granite are in the true sense of the word seamlessly made from a single source and are ideally suited for the modern and aesthetic design of sanitary facilities in institutional areas.

MIRANIT stands for a stable compound consisting of approx. 80% natural minerals such as marble powder, sandstone and quartz sand as well as approx. 20% high-quality unsaturated polyester resin. Owing to its exceptional rheological properties, this resin-bonded mineral material can be formed into any shape, even where low material thicknesses are required.

The fracture-resistant material is enveloped in a smooth, pore-free and high-gloss exterior skin. This colouring Gelcoat is easy to clean and extremely durable. Even water temperatures up to 80° C have no detrimental effect on standard-coloured Gelcoat surfaces.

ADVANTAGES COMPARED WITH SANITARY CERAMICS

Sanitary products manufactured under the brand name MIRANIT can be referred to collectively as cast mineral. Thus necessarily leads to a comparison with products in the field of ceramics, which reveals that MIRANIT products have the following advantages:

- Increased stability with respect to impact strength and breaking strength
- Clear form language due to very flat surfaces and small radii
- Niche washbasins with a total length of up to 3.60 m are feasible
- Damaged surfaces can be mended with special repair kits and are mechanically workable.

The composite material offers important advantages in providing customised solutions for optimum space utilisation in the sanitary rooms of industry, sports venues, hotels and restaurants.
WASHBASIN TAPS

Self-closing taps and bip tap

AQUALINE-C
Self-closing pillar tap
