112.5 MG FLURALANER Chewable Tablets for Very Small Dogs
250 MG FLURALANER Chewable Tablets for Small Dogs
500 MG FLURALANER Chewable Tablets for Medium Dogs
1000 MG FLURALANER Chewable Tablets for Large Dogs
1440 MG FLURALANER Chewable Tablets for Very Large Dogs

ACTIVE CONSTITUENT: 136.4 g/kg Fluralaner

BRAVECTO Chewable Tablets provide
• Treatment and prevention of flea (Ctenocephalides felis) infestations for 3 months
• Treatment and control of paralysis tick (Ixodes holocyclus) for 4 months
• Treatment and control of brown dog tick (Rhipicephalus sanguineus) for 8 weeks
• Rapid onset of action kills newly emerged adult fleas before they lay egg
• Resists incursion of flea allergy dermatitis (FAD) by controlling adult fleas
• Highly palatable so easy to administer

BRAVECTO contains Fluralaner, a member of the antiparasitic class of oxazoline-substituted benzamide derivatives. Fluralaner acts antagonistically on arthropod ligand-gated chloride channels (GABA-receptor and glutamate-receptor). BRAVECTO is effective against fipronil-resistant strains of fleas.

BRAVECTO can be given without the risk of allergic reactions or photosensitivity.

BRAVECTO can be used in breeding, pregnant and lactating dogs.

ONSET OF ACTION AND EFFICACY
BRAVECTO provides effective control of pre-existing infestations of paralysis ticks (Ixodes holocyclus) within 24 hours.

BRAVECTO provides effective control of fleas on dogs within 8 hours of administration, and subsequently maintains persistent efficacy against flea re-infestations for 3 months following administration.

The flea life cycle can be broken by the rapid onset of action and the long-lasting efficacy against adult fleas on the dog. Newly emerged adult fleas on a dog are killed before viable eggs are produced.

BRAVECTO can be used as part of a treatment strategy for flea allergy dermatitis (FAD).

Ixodes holocyclus ticks do not occur in Western Australia. In tick season daily searching for and removal of any ticks found is recommended.

DIRECTIONS FOR USE

Precautions
BRAVECTO should not be used in puppies less than 8 weeks of age or weighing less than 2 kg.

Dosage and Administration
BRAVECTO is available in five sizes. The following table indicates the size of chewable tablet to be used according to the bodyweight of the dog (equivalent to 25–56 mg fluralaner/kg bodyweight):  

<table>
<thead>
<tr>
<th>Bodyweight of Dog (kg)</th>
<th>Chewable Tablet Size to be Used</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 – 4.5</td>
<td>BRAVECTO 112.5 MG FLURALANER Chewable Tablets for Very Small Dogs</td>
</tr>
<tr>
<td>&gt;4.5 – 10</td>
<td>BRAVECTO 250 MG FLURALANER Chewable Tablets for Small Dogs</td>
</tr>
<tr>
<td>&gt;10 – 20</td>
<td>BRAVECTO 500 MG FLURALANER Chewable Tablets for Medium Dogs</td>
</tr>
<tr>
<td>&gt;20 – 40</td>
<td>BRAVECTO 1000 MG FLURALANER Chewable Tablets for Large Dogs</td>
</tr>
<tr>
<td>&gt;40 – 56</td>
<td>BRAVECTO 1440 MG FLURALANER Chewable Tablets for Very Large Dogs</td>
</tr>
</tbody>
</table>

Within each weight range, a whole tablet must be used for dogs weighing more than 54 kg and a combination of two tablets that most closely matches the bodyweight.

In dogs older than 8 weeks, treatment every 8 weeks has been shown to be well tolerated.

Administer BRAVECTO at or around the time of feeding. BRAVECTO is easily consumed by most dogs when given by the owner.

BRAVECTO can also be given with food or administered in the same way as other tablets.

BRAVECTO chewable tablets can be used year round.
