ACCREDITATION CRITERIA FOR SPECIAL INSPECTION AGENCIES

AC291

August 2016

PREFACE

The attached accreditation criteria has been issued to provide all interested parties with guidelines on implementing performance features of the applicable standards referenced herein. The criteria was developed and adopted following public hearings conducted by the International Accreditation Service, Inc. (IAS), Accreditation Committee and is effective on the date shown above. All accreditations issued or reissued on or after the effective date must comply with this criteria. If the criteria is an updated version from a previous edition, solid vertical lines (|) in the outer margin within the criteria indicate a technical change or addition from the previous edition. Deletion indicators (→) are provided in the outer margins where a paragraph or item has been deleted if the deletion resulted from a technical change. This criteria may be further revised as the need dictates.

IAS may consider alternate criteria provided the proponent submits substantiating data demonstrating that the alternate criteria are at least equivalent to the attached criteria and otherwise meet applicable accreditation requirements.

Copyright © 2016
1.0 INTRODUCTION

1.1 Scope: This document sets forth the requirements for obtaining and maintaining International Accreditation Service, Inc. (IAS), special inspection agency (“SIA”) accreditation and for the qualifying data that must be submitted relating to the scope of inspection for which accreditation is sought. This document supplements the IAS Rules of Procedure for Special Inspection Agency Accreditation. Section 1704 of the International Building Code® (IBC) provides for special inspection agencies. The final authority for recognition of special inspection agencies rests with the building official having jurisdiction, and nothing contained herein affects or diminishes the authority in any way. Appendix A for Material Certifications is a part of this document and includes references to promulgated requirements of the Authority Having Jurisdiction (AHJ).

1.2 References and Normative Documents: The following references may also be used to comply with the applicable requirements of this criteria and to determine technical competence of personnel and processes of the SIA.

Publications of the following Standard Development Organizations (SDOs), as applicable, AAMA, ACI, ASHRAE, AISC, ANSI, ASCE, ASME, ASTM, AWPA, AWS, AWWA, CSA, FEMA, NFPA, NHMA, SDI, SJI, SMACNA, TIA, TPI, UL and WDMA may also be used.

Publications, including codes and standards, listed below refer to current editions (unless otherwise stated), current editions of related construction codes published by the International Code Council or codes duly adopted by the relevant jurisdiction.

1.2.1 International Building Code® (IBC) or applicable codes currently adopted by the jurisdiction in which the project is to be constructed.

1.2.2 New York City Construction Code.

1.2.3 New York City Department of Buildings Rule for New York City, 1RCNY 101-06 and 101-07.

1.2.5 ISO/IEC Standard 17024, Conformity assessment – General requirements for bodies operating certification of persons.

1.2.6 IAS Rules of Procedure for Special Inspection Agency Accreditation.

1.2.7 IAS AC371, Accreditation Criteria for Training Agencies for Work Force Qualification Programs.

1.2.8 ICC/IAS Model Program for Special Inspection.

1.2.9 ILAC P10:01, ILAC Policy on Traceability of Measurement Results.

1.2.10 ILAC P15:06/2014 Application of ISO/IEC 17020:2012 for the Accreditation of Inspection Bodies.

1.2.11 ICE (Institute for Credentialing Excellence) 1100, Standard for Assessment-Based Certificate Programs (2009).

1.2.12 ASTM C33/C33M, Standard Specification for Concrete Aggregates.

1.2.17 ASTM E2174, Standard Practice for On-Site Inspection of Installed Fire Stops.

1.2.20 ASTM E2659, Standard Practice for Certificate Programs.

1.2.21 Firestop Contractors International Association “FCIA Firestop Manual of Practice,” Appendix H, Revision No. 8, Section 07 84 00, Firestopping Penetrations, Joints and Perimeter Fire Containment.

1.2.22 FM 4991, Approval Standard for Firestop Contractors.

1.2.23 UL 1479, Standard for Fire Tests of Penetration Firestops.

1.2.25 IAS Policy on Accreditation Certificate Validity.

2.0 DEFINITIONS

2.1 Accreditation: Third-party attestation related to a conformity assessment body conveying formal demonstration of its competence to carry out specific conformity assessment tasks.

2.2 Accreditation Body (AB): Authoritative body that performs accreditation.

2.3 Accredited Calibration Provider: A calibration laboratory that is accredited by IAS [or an Accreditation Body with which IAS has a Mutual Recognition Arrangement (MRA) relationship] as operating under ISO/IEC Standard 17025.

2.4 Approved: Acceptable to the building official or authorized representative of the local AHJ.
2.5 Approved Agency: An established and recognized agency regularly engaged in conducting tests and/or furnishing inspection services, when such agency has been approved.

2.6 Assessment: Process undertaken by an accreditation body to assess the competence of a CAB, based on particular standard(s) and/or other normative documents and for a defined scope of accreditation.

2.7 Authority Having Jurisdiction (AHJ): An organization, office, or individual responsible for enforcing the requirements of a code or standard, or for approving equipment, materials, an installation, or procedure.

2.8 Certificate of Compliance: A certificate stating that materials and products meet specified standards or that work was done in compliance with approved construction documents.

2.9 Conformity Assessment Body (CAB): Body that performs conformity assessment services and that can be the object of accreditation.

NOTE: Whenever the word “CAB” is used in the text, it applies to both the “applicant and accredited CABs” unless otherwise specified.

2.10 Extending Accreditation: Process of enlarging the scope of accreditation.

2.11 Fabricated Item: Structural load-bearing or lateral load-resisting assemblies consisting of materials assembled prior to installation in a building or structure, or subjected to operations such as heat treatment, thermal cutting, cold working or reforming after manufacture and prior to installation in a building or structure. Materials produced in accordance with standard specifications referenced by the building code, such as rolled structural steel shapes, steel-reinforcing bars, masonry units, and wood structural panels or in accordance with a standard listed in the IBC that provides requirements for quality control done under the supervision of a third-party quality control agency shall not be considered “fabricated items.”

2.12 Fire Protection Engineer (F.P.E.): An individual with specialized training in fire protection systems for building construction, as evidenced by a bachelor’s or higher degree in fire protection engineering from an accredited college, university or engineering school.

2.13 Fire-resistant Materials: Cementitious or fibrous materials, intumescent or thin films that are applied to provide fire-resistant protection of the substrates.

2.14 Firestop System: An assemblage of materials including fire-resistance-rated assembly; penetrating item(s); gap size; the fill, void or cavity materials installed as a system in the breach of the assembly to extend the fire; smoke or other resistance rating of the assembly at the breach due to penetration by electrical, plumbing or mechanical items tested to ASTM E814/UL 1479, by expansion and construction joints tested to UL 2079/ASTM E1966, and by perimeter joints tested to ASTM E2307 in buildings.

2.15 Intumescent Fire-resistant Coatings: Thin film liquid mixture applied to substrates by brush, roller, spray or trowel that expands into a protective foamed layer to provide fire-protection of substrates when exposed to flame or intense heat.

2.16 Label: An identification applied on a product by the manufacturer that contains the name of the manufacturer, the function and performance characteristics of the product or material, and the name and identification of an approved agency; and that indicates that a representative sample of the product or material has been tested and evaluated by an approved agency.

2.17 Management System Documentation: Documentation, inclusive of operating process and technical work instructions, such as the inspection procedures/methods/checklists/forms/report templates, etc., on the requirements stated in this criteria (AC291) and ISO/IEC 17020, including policies and objectives for effective implementation at all levels of operation.

2.18 Manufacturer’s Designation/Mark: An identification applied on a product by the manufacturer indicating that a product or material complies with a specified standard or set of rules.

2.19 Mastic Fire-resistant Coatings: Liquid mixture applied to a substrate by brush, roller, spray or trowel that provides fire-resistant protection of a substrate when exposed to flame or intense heat.

2.20 Professional Engineer (P.E.): An engineer licensed to practice the applicable discipline in the jurisdiction where the project is to be constructed.

2.21 Qualified: Meeting the minimum requirements of Table 1, unless otherwise stipulated by the AHJ/Scheme.

2.22 Registered Architect (R.A.): An architect licensed to practice the applicable discipline in the jurisdiction where the project is to be constructed.

2.23 Registered Design Professional: An individual who is registered or licensed to practice their respective design profession as defined by the statutory requirements of the professional registration laws of the jurisdiction where the project is to be constructed.

2.24 Remote Surveillance Assessment: A remote assessment tool used to evaluate compliance as part of the IAS ongoing plan of surveillance. Remote surveillance assessments are limited in scope, typically covering a sampling of key requirements. Remote surveillance assessments rely on computer-assisted auditing techniques, including teleconferencing, interactive web-based communications or remote access to management system documentation and records. Remote surveillance assessments do not replace the requirement for initial assessments or periodic on-site reassessments of an accredited organization.

2.25 Scope of Accreditation: Specific conformity assessment services for which accreditation is sought or has been granted.

2.26 Special Inspection: Inspection as herein required of the materials, installation, fabrication, erection or placement of components and connections requiring special expertise to ensure compliance with approved construction documents and referenced standards. Reference the International Building Code Chapter 17, Section 1702, or the code most currently adopted by the AHJ in the jurisdiction where the project is to be constructed.
2.27 Special Inspection Agency (SIA): A third-party entity approved by the building official to perform special inspections.

2.28 Special Inspection, Continuous: The full-time observation of work requiring special inspection by an approved special inspector who is present in the area where the project is to be constructed.

2.29 Special Inspection, Periodic: The part-time or intermittent observation of work requiring special inspection by an approved special inspector who is present in the area where the work has been or is being performed and at the completion of the work.

2.30 Special Inspector: A qualified person employed by an SIA, who shall demonstrate competence, to the satisfaction of the building official, for the inspection of the particular type of construction or operation requiring special inspection.

2.31 Structural Observation: The visual observation of the structural system by a registered design professional for general conformance to the approved construction documents at significant construction stages and at completion of the structural system. Structural observation does not waive inspections required by Section 110 or Section 1704 of the IBC.

2.32 Surveillance: Set of activities, except reassessment, to monitor the continued fulfillment by accredited CABs of requirements for accreditation.

NOTE: Surveillance includes both surveillance on-site assessments and other surveillance activities, such as the following:

a) Enquiries from the accreditation body to the CAB on aspects concerning the accreditation;
b) Reviewing the declarations of the CAB with respect to what is covered by the accreditation;
c) Requests to the CAB to provide documents and records (e.g., audit reports, results of internal quality control for verifying the validity of CAB services, complaints records, management review records);
d) Monitoring the performance of the CAB (such as results of participating in proficiency testing).

2.33 Witnessing: Observation of the CAB carrying out conformity assessment services within its scope of accreditation.

3.0 CRITERIA/GENERAL REQUIREMENTS

The following explains the criteria requirements and documentation information that must be submitted by agencies applying for Special Inspection Agency accreditation:

Note: An electronic format is preferred.

3.1 Documented Information Submission: The management system documentation shall comply with all requirements stated in this document, along with the relevant requirements of ISO/IEC Standard 17020:2012 and the building code currently adopted by the AHJ in the jurisdiction where the project is to be constructed. This includes all additional requirements (local laws, bulletins, regulations, directives, executive orders, etc.) promulgated by the AHJ.

An electronic copy of the current management system documentation must be submitted to IAS. This submission shall be reviewed upon receipt to verify adequacy of coverage, prior to scheduling an on-site assessment. Scanned/extracted copies of other copyrighted documents are not to be submitted for IAS review.

3.2 Legal Status: The SIA, or the organization of which it forms a part, shall be legally identifiable.

3.3 Liability Insurance: The SIA organization or organization of which it forms a part shall provide evidence of liability insurance per contractual requirement or the local requirement enforced by the AHJ.

3.4 Risk to Impartiality: The SIA shall identify and document the mechanism and an analysis of perceived risks to impartiality on an on-going basis. Responses to both perceived and actual risks shall be recorded. The SIA shall further consider situations where management, staff and special inspectors experience undue pressure from any source, internal or external, that could influence the results of special inspection, project signoff, contract/quote approval, work scheduling or any other related activity. Such pressures may include: threats, inducements, unreasonable time pressures, bonus/salary schemes, productivity incentives, etc.

3.4.1 Compensation of inspectors must not directly depend on the number of inspections they perform and in no case on the results of such inspections.

3.4.2 A company-wide Ethics Procedure and Conduct shall be documented and implemented.

3.4.3 An affidavit signed by the Principal Owners/Stake holders of the SIA and acknowledged by all employees whose job responsibilities are related to Special Inspection functions, attesting to compliance with the third-party requirements described below:

3.4.4 The applicant SIA and its inspection staff shall not be part of or have a financial or other interest in the construction, manufacture, representation, supply, installation or maintenance of the structures or components (including personnel, facility, technology or methodology) which they inspect, or in entities that supply similar competitive items or services. The SIA and its staff shall not engage in any activities that may conflict with their independence of judgment and integrity. The SIA must operate in a nondiscriminatory, transparent manner so as to allow full access to its services by interested parties. Additional AHJ rules and regulations published shall be mandatory.

3.5 Confidentiality: The SIA shall have a policy that ensures confidentiality of the customer information by the SIA and by any sub-contractors, taking into account any relevant legal and statutory requirements.

Implementation of Sections 3.4 and 3.5 must provide objective evidence that the SIA personnel have read and understood these requirements. Appropriate objective evidence may be in a form referencing the requirement, or any other method appropriate to ensure personnel understand and attest they are in compliance with the requirements.
3.6 Organization and Independence: The SIA size, structure and composition shall be suitable for the competent performance of the tasks within the SIA's scope. A single person (1 inspector) agency (SPA) may be accredited provided all relevant requirements of this document are effectively implemented. Categorization of the SIA shall match the requirement of ISO/IEC 17020, Clause 4.1.6 (Type-A, B or C).

The SIA shall maintain an up-to-date organizational chart clearly showing the functions and lines of authority for staff within the SIA. Any relationship between special inspections and other activities within the organization shall also be defined. The position of the Technical Manager (and Deputy Technical Manager) and Quality Manager (and Deputy Quality Manager) (however named) shall be clearly shown in the chart.

Job descriptions and responsibilities of key personnel shall be defined including:

3.6.1 A technical manager (however named) with the necessary qualifications and experience and who has overall responsibility for the technical operations.

3.6.2 A quality manager (however named) with the necessary qualifications and experience and who has the responsibility for the management system and its implementation. This person shall have direct access to the highest level of authority within the organization. Necessary qualifications and experience must be sufficient to effectively perform their responsibilities.

3.6.3 Field supervisor(s) who is (are) responsible for the results of inspections, and the training and monitoring of inspectors for each field of inspection. If the field inspection supervisor covers more than one field of inspection, he/she shall be suitably qualified in each field.

3.6.4 Deputies in the absence of technical manager, quality manager and/or field supervisor(s).

Note: The purpose of nominating a deputy is to satisfy the need for competent management in the absence of the manager. In an organization where the absence of a key person causes the cessation of work, the requirement for deputies may be waived. Other positions that could affect the quality of inspection activities, such as manager and inspectors, shall be described.

3.7 Technical Competency of Special Inspectors: A matrix matching inspector qualifications, certifications and relevant experience to categories in which they are authorized to conduct special inspections, shall be maintained and used for dispatch. Inspector education, certification and relevant documented experience shall satisfy the requirements of the AHJ or Table 1 (if none are specified). The matrix shall include the date of employment and expiration dates for certifications (if any).

IAS shall assess the appropriateness of the competence requirements, education, training, technical knowledge, hands on skills as demonstrated on-site or by interview on-site or at the office. Personnel found to possess inadequate skills and job knowledge will be expected to undertake training, mentoring or gain additional experience to correct such discrepancies.

The matrix shall also identify staff that are authorized by the SIA to perform technical reviews, final sign off and release of reports, including any additional requirement of the AHJ. SIA staff that are authorized to perform on-site supervision and monitoring and on-site training shall also be identified.

3.8 Job-site Safety: Safety procedures addressing perceived risks in each field of inspection, along with measures for mitigating such unsafe conditions during field inspections and testing, shall be implemented by the SIA. Special conditions applied to each project/installation by local, state and Federal authorities shall be binding.

3.9 Measuring and Monitoring Resources: The SIA shall document policies and procedures on equipment maintenance, including equipment used to perform special inspections and/or verify testing under special inspections in the field.

3.9.1 Special inspection agencies shall maintain a list of test and measuring equipment used for conducting special inspections under this criteria. This list shall include information on range, accuracy, maintenance, calibration status and frequency of calibration. Wherever possible, calibration services shall be provided by a calibration laboratory accredited by IAS or by an accreditation body that is a partner with IAS in a mutual recognition arrangement.

It is recognized there may not be nationally recognized standards available for unique inspection equipment. When such instances exist, calibration procedures must be in compliance with manufacturer's recommendations to the extent that such inspection equipment is calibrated to ensure consistency with the required measuring capabilities. It is the SIA's responsibility to ensure that such testing equipment is properly calibrated prior to use, specifically when another entity is responsible for supplying or performing tests being witnessed and reviewed for acceptance by the SIA.

3.9.2 The SIA shall have policies and procedures for handling defective equipment. The SIA shall examine the effect of test and/or measuring equipment found to be defective on previous inspections and, when necessary, take appropriate corrective action.

3.9.3 All testing and measurement equipment used at job sites (SIA owned, SIA leased/rented or supplied by others) shall be sorted into different categories, depending upon the precision of measurement and complexity of process, as follows:

3.9.3.1 Equipment calibrated by an external source (accredited partner with IAS in an MRA).

3.9.3.2 Equipment for which verification of calibration is done internally by SIA or others. Verifiable documents shall be readily available before final acceptance of results of tests/measurements.

3.9.3.3 Equipment that does not require ongoing calibration, but verification before use.

3.10 Record and Document Control: All documented information issued to personnel in the SIA as part of the management system documentation shall be reviewed and approved for use by authorized personnel prior to issue. A master list or an equivalent document control procedure (in any form) identifying the current revision status and distribution of documents in the
management system shall be established and be readily available to preclude the use of invalid and/or obsolete documents. Records shall be maintained by the SIA for a period specified by the AHJ or a period, as per a contractual requirement, whichever is longer, and shall include, at least the following but not limited to:

3.10.1 Legal Entity status and AHJ’s registration requirement, if any;
3.10.2 Human Resources record for confidentiality, impartiality and conflict of interest;
3.10.3 Liability insurance;
3.10.4 Perceived risk analysis and mitigation records;
3.10.5 Signed quotes/contracts;
3.10.6 Record of inspection schedules/dispatch record;
3.10.7 Inspector’s competency matrix (for each category of inspection and for contract employees, if any);
3.10.8 List of subcontractors (for inspection, testing and calibration, if any);
3.10.9 Special inspection reports with discrepancy logs and all resolutions, if any;
3.10.10 Calibration record of measuring and monitoring equipment (owned, rented, witnessed and/or supplied by others);
3.10.11 Chain of custody of samples (created or supervised), if kept separately;
3.10.12 List of controlled documents (including: management system manual, process documents, inspection procedures, worksheets prepared by the inspector, templates and other forms);
3.10.13 Internal audit, corrective measures, preventive actions and plans for improvement;
3.10.14 Customer complaints with record of resolution;
3.10.15 Feedback analysis;
3.10.16 Training plan(s) and/or training records;
3.10.17 Supervision and monitoring plan for special inspectors, including a report of evaluation.
3.10.18 Uniquely identified management system documents generated by the SIA. Such identification shall include: the date of issue and/or revision identification, page numbering, total number of pages, a mark to signify the end of the document and the issuing authority.
3.10.19 Procedures established to describe the process for changing and controlling electronic documents.
3.10.20 Documented policies and procedures on how the SIA shall retain records (electronic record and hard copy record) so as to have foolproof protection in case of accidental loss (both at facility and remotely).

Note: Some records need not be maintained separately if they are part of, or subparts of, other records.

Note: Controlled documents include, but are not limited to, the quality manual, standard operating procedures, special inspection procedures, and copies of forms, checklists, etc., relevant to the inspection activities.

3.10.21 Invalid or obsolete documents must be promptly removed from all points of issue or use. Obsolete documents retained for either legal or knowledge-preservation purposes must be suitably marked.

3.11 Quotation and Contract: Contracts or work orders (RFQ or agreement of similar intent) for special inspections shall ensure a clear and demonstrable understanding between the SIA and its customer (owner or their authorized representative). The scope of the inspection work to be undertaken by the SIA shall be clearly defined and agreed to in writing. Where appropriate (see note) each contract or request should be reviewed by the SIA to ensure that:

3.11.1 The SIA has the capability and only conducts work within its area of expertise (manpower and other resources to perform inspection) to meet the customer’s requirements,
3.11.2 Contract conditions are agreed to in writing,
3.11.3 Special equipment needs are identified,
3.11.4 Personnel training needs, if any, are identified,
3.11.5 Regulatory and statutory requirements are identified,
3.11.6 Special safety requirements are identified,
3.11.7 The extent of subcontracting arrangements required are identified and communicated,
3.11.8 Documentation needs are identified, report submission schedule/modes are communicated,
3.11.9 The final contract or request accepted by the SIA agrees with the original version that was reviewed,
3.11.10 Perceived risk analysis is done for a specific quote, as applicable,
3.11.11 All records of contract review are retained.
3.11.11.1 For routine or repeat work requests, review may be limited to considerations of time and human resources and an acceptable record in such cases would be a signed acceptance of the contract by an appropriately authorized person.
3.11.11.2 In situations where verbal agreements are acceptable, the SIA should keep a record of all requests and instructions received verbally, dates and the identity of the customer’s representative.

3.12 Sample Handling: Procedures for the preparation, acquisition, handling and storage of material samples or field-prepared specimens in accordance with applicable codes and/or standards shall be documented by the SIA. Traceability of samples prepared by SIA or other agencies involved in preparation, storage and transportation of samples, must be maintained.

In the absence of such information, the SIA must have procedures for documenting sampling, handling, storage and transportation techniques.
3.13 Outsourced Inspection Services: Outsourcing part of the SIA’s responsibility is permitted only to accredited SIAs (accredited to the same scheme by an accreditation body that is a partner with IAS in an MRA), unless specified by the AHJ. The outsourced organization (otherwise called subcontractor) must have documentation substantiating that it agrees to operate under the SIA’s management system for subcontracting process qualification. A list of current outsourcing resources must be maintained.

IAS shall not grant accreditation to the SIA for the scope of special inspection for which it does not have any evidence of the competence or resources required to be eligible to perform the inspection and for which it intends to subcontract the entire special inspection activity on a permanent basis.

Contract inspectors, who work under the SIA’s system, are not to be treated as subcontractors, as they are mandated to follow all requirements of the SIA’s management system, as are regular employees, and local requirements for employment terms shall be mandated.

Note: The terms “subcontracting” and “outsourcing” are considered to be synonyms. Logistics services provider for measuring and testing equipment is not considered as a subcontractor.

3.14 Complaints & Appeal: Policies and procedures for processing complaints and appeals from clients and regulatory agencies shall be in place and evidence of implementation shall be documented. Records of all complaints and resolutions shall be maintained and evidence of implementation shall be documented.

3.15 Feedback Collection: Policies and procedures for client feedback shall be in place and evidence of implementation shall be documented.

Note: Examples of feedback include client satisfaction surveys and review of inspection reports with clients. Job-site visits or interactions with clients can also generate valuable feedback.

3.16 Internal Audit: Policies and procedures for internal audits shall be in place and evidence of implementation shall be documented.

Note: For agencies with no additional qualified internal auditors, such internal audits may be performed by an independent individual qualified in conformity assessment.

3.17 Management Review: Policies and procedures for management review shall be in place and evidence of implementation shall be documented. The management review shall, at a minimum, take account of:

3.17.1 Internal audit reports;
3.17.2 External assessment reports;
3.17.3 Complaints from clients;
3.17.4 Adequacy of human and equipment resources;
3.17.5 Results of client feedback;
3.17.6 Training needs;
3.17.7 Results of supervision and monitoring activities of inspectors, including verification of inspector’s performance related to ethical and impartial behavior;
3.17.8 Changes needed in the management system;
3.17.9 Perceived risk to impartiality.

3.18 Status Review and Notification/Reporting Discrepancy: Policies and procedures shall be in place to notify the building official(s) and registered design professional(s) if corrective actions arising from special inspections remain unresolved. These must be consistent with the building code requirements and those stipulated by the AHJ in the area where the project is to be constructed.

3.19 Procedures for dispatching daily, intermediate and final reports: Issuance of a final inspection report (sign off documentation or any other applicable contractual deliverable) shall occur only after verification that remaining discrepancies in each special inspection category have been resolved to the satisfaction of the owner or their authorized representative. Evidence of correlation of data shall be made available during on-site assessment.

Note: An example is a sign-off letter that is traced back to all related inspection visits performed, with cumulative compilation of status of closure of discrepancies observed/resolved.

4.0 ASSESSMENTS

4.1 Prior to accreditation, SIAs are subject to an on-site assessment by IAS. This assessment is to determine compliance with this criteria (AC291), with IAS policies, and to evaluate expertise and equipment in the area(s) of inspection where accreditation is sought.

4.2 After the initial year of accreditation, SIAs are subject to remote surveillance assessment as part of the IAS ongoing plan of surveillance. The remote surveillance assessment is mandatory and includes review of at least the following: the SIA’s most recent internal audit and management review reports/minutes, any complaints, actions resulting from any Concerns noted in the previous IAS assessment report, and any major changes in key personnel or in the SIA’s management system documentation. For technical review, SIAs are required to submit a minimum of four (4) actual inspection reports for any special inspection that falls under the SIA’s scope of accreditation with IAS. Each inspection report must be for a different type of inspection and may be redacted. All information submitted is for IAS information only and will be held in strict confidence.

4.3 IAS will conduct an on-site reassessment of accredited SIAs at a minimum of once every two years, commencing from the date of the initial accreditation, for verification of continued compliance with IAS accreditation requirements.

4.4 In the intervening years between on-site reassessments, a remote surveillance assessment as described in Section 4.2 above is required.

5.0 CONTENTS AND COVERAGE OF INSPECTION REPORTS

Inspection reports issued by the SIA shall accurately and clearly present the results of special inspections. Inspection reports shall comply with the reporting requirements of the building code or AHJ’s requirements.
and contain the following minimum information, as applicable:

5.1 Inspection date, and arrival and departure times (or total duration on-site) of the inspector.

5.2 Information pertaining to review of material records. (Material certification requirements are included, but not limited to those noted, in Appendix A.)

5.3 Structure/item inspected, including applicable codes, standards, approved construction documents, etc.

5.4 Results of inspection/tests witnessed or performed.

5.5 Resolution of any discrepancies noted during previous inspections.

5.6 Description of samples obtained, if any, including quantity, dimensions and relevant physical characteristics. Samples collected and sent to a test laboratory for evaluation and testing shall have a chain of custody.

5.7 Identification of measurement and monitoring devices used during inspection and measurement/testing, where results are declared and included as part of the inspection report with attestation.

5.8 Names and signatures of the inspector and client's representative (if applicable per contract).

6.0 TRAINING

Identification of training needs for each person shall take place at least once per year. This review shall result in documented plans for further training or a statement that no further training is presently required for the individual. Training records should normally be signed by the individual and the reviewer. (If training needs are not signed, they must include the identity of the reviewer and the date and nature of training.) A statement that no further training is needed shall be interpreted as an endorsement, by the organization, of the person's competence in all aspects of their role at the date of the review.

Where records indicate that a member of staff has not maintained current involvement in a particular skill area, the SIA must have documented procedures for managing the progressive reduction of current knowledge, which inevitably results. Procedures must also be in place for providing refresher training where required.

7.0 SUPERVISION/MONITORING OF INSPECTORS

To ensure consistency in inspections and compliance with accreditation requirements, SIAs shall have an effective supervision/monitoring system for their inspectors. The extent, nature and level of supervision/monitoring exercised shall take into account the qualifications, experience, training and technical knowledge of the SIA staff and the inspections being undertaken. Regular review of inspection reports by supervisory personnel shall include:

7.1 Desk Top Review

7.1.1 Review of the inspection reports for adequacy and completeness, at periodicity commensurate with project needs, but at least once during each calendar year.

7.1.2 Technical review by supervisors with the authority and acquired knowledge/expertise in specific area of inspection. For inspections by licensed professionals, the SIA shall determine whether technical reviews are warranted.

7.1.3 Completeness reviews to ensure all required information is included in the final report and that the report approved for release is desirable.

7.1.4 Competence of the inspector with the SIA's policies, operating procedures and regulatory/statutory requirements to be compiled for specific job responsibility.

7.1.5 Compliance with requirements imposed by the jurisdiction in which inspections are conducted.

7.1.6 Review of feedback from the clients (and building department staff, if applicable).

In the event that no inspection activities were performed in a given situation, the supervisor must formally make an attempt to simulate the inspection environment and authorize the inspector to perform inspections on demand.

Note: In case of a single special inspector, random review by peer group or client may be essential, at the discretion of the agency.

Note: In case of inspection performed by a primary inspector and no other equally (at least) qualified personnel are available in the agency, such reports could be self-certified by performing inspector.

7.2 On-site Review

7.2.1 Review of records maintained of the monitoring of inspectors at least once during their first month of employment.

7.2.2 Review of records of periodic monitoring of inspectors in the field not less than once every four years for each field of inspection by the SIA. A rolling plan shall be made available at the initial stage of implementation and continuity shall be demonstrated.

7.2.3 Review of the quality of inspection activities established by the SIA which may include, but are not limited to:

7.2.3.1 Comparison of findings: Several inspectors (drawn from one or several sites) may inspect an item (either concurrently or over a time interval such that the stability of the inspected item is assured) and the findings are then compared. Comparisons may be numerical or qualitative and a statistical analysis of outcomes may highlight whether the findings from each inspector are satisfactory. Comparison is against the consensus of the group.

7.2.3.2 Measurement audits: An object of inspection with known reference values or qualities may be used in a manner similar to that described in Section 7.2.3.1 above. The extent of variance between the reported results from the inspector and the reference value/quality may be used as a performance valuation tool.

7.2.3.3 Technical witnessing: An inspector may observe another inspector in the course of an inspection, to confirm the coverage and application of judgment. This
technique is frequently used as a measure of the effectiveness of training.

7.3 Authorization and identification of special inspectors: Documentation of the start date of authorization of each special inspector.

8.0 MINIMUM QUALIFICATIONS FOR SPECIAL INSPECTORS

Qualifications requirements for special inspectors are as specified in Table 1, unless otherwise stipulated by AHJ/Scheme Owner. Where professional licensing is NOT a local AHJ requirement to perform duties, other equivalent education qualification and professional experience shall be considered as equivalent, as determined in the Table and application for specified economy or AHJ only.

1 It is recognized that development of qualified inspectors requires those individuals to obtain experience performing inspections of actual work. The requirements herein include such experience as do some of the required certifications. To provide a vehicle for individuals to obtain this experience, they may perform inspections in accordance with written associate or apprentice programs that are prepared by the SIA, approved by the IAS, and meet the requirements of the local governing authority. These programs must include, at a minimum: passing certification exams, when available, administered by third-party agencies, such as the ICC and ACI; in-house SIA and third-party training; observation by the associate or apprentice of inspections performed by certified inspectors; and performance by the associate or apprentice inspectors of duplicate inspections with certified inspectors. This written program will also define the use of associate or apprentice inspectors and will limit their use based upon the level of supervision and the complexity of the inspection assignment. The complexity of an assignment should be minimal and would often be task specific. Supervision should be direct, with a certified inspector being present at the site with the associate or apprentice. The associate or apprentice to certified inspector ratio on a project site should not exceed 1:1. All documents related to work by an associate or apprentice inspector must be cosigned by a certified inspector. The written program must include documentation of compliance with the program.

2 Abbreviations: SI = Special Inspector; ICC = International Code Council; NICET = National Institute for Certification in Engineering Technologies; AWCI = Association of the Wall and Ceiling Industry; UL = Underwriters Laboratories Inc.; AABC = Associated Air Balance Council

3 When qualifications for special inspectors are locally defined by statute, ordinance or rule, and vary from the requirements outlined in this criteria, these local requirements may be recognized at the discretion of IAS.
Notes:

4. Applicants shall comply with one of the following education and experience requirements, unless stipulated by the AHJ with an additional requirement(s):
   a. Professional Engineer (PE), licensed Architect, or Registered Design Professional (RDP) and a minimum of three months of relevant work experience; or
   b. Bachelor of Science Degree (BS) in Engineering, Architecture, or Physical Science and a minimum of six months of relevant work experience; where licensing is not practiced minimum experience period may be extended at the discretion of the AHJ; or
   c. Two years of verified college or technical school (copy of diploma or transcript required) and a minimum of one year of relevant work experience; or
   d. High school or equivalent graduate (copy of diploma or certificate required) and a minimum of two years of verified relevant work experience; or
   e. A minimum of three years of verified relevant work experience.
   f. A minimum of two years structural design/engineering experience, or a minimum of two years in manufacturing/testing.

5. RDPs, PEs, or licensed Architects are exempt from Required Certification(s) listed in Table 1 above unless required by AHJ, but are subject to on-site assessment of competence by IAS. Where licensing is not practiced, Bachelor of Science Degree (BS) in Engineering, Architecture, or Physical Science shall be used as equivalent educational need. A relevant number of years of experience as mentioned in Note 4 above are desirable for professionals performing inspection, and the need is based on the area of expertise and the AHJ requirements, if any.
## APPENDIX A — Material Certifications
(Standards listed in Appendix A are Reference Documents; typical reference and other equivalent National standards or norms referenced in contract shall be binding)
