**Agilent HSCH-9551**

**GaAs Schottky Diode**

**Antiparallel Pair**

**Data Sheet**

**Features**

- Low Junction Capacitance
  - typically 40 fF
- Low Series Resistance
  - typically 3 Ω
- Large bond pads suitable for automated wire-bonding or flip-chip assembly
- Polyimide scratch protection

**Specifications**

- \( V_F \) (1 mA): 700-800 mV
- \( V_F \) (10 mA): 800-850 mV
- \( R_S \) (5 mA): <6 Ω
- \( C_J \) (per diode): <0.050 pF

**Assembly Techniques**

GaAs Schottky diodes are ESD sensitive. ESD preventive measures must be employed in all aspects of storage, handling, and assembly.

ESD precautions, handling considerations, die attach and bonding methods are critical factors in successful diode performance and reliability.

Agilent application note #54, "GaAs MMIC ESD, Die Attach and Bonding Guidelines" provides basic information on these subjects.

---

**Description**

The HSCH-9551 is an integrated antiparallel pair of GaAs Schottky barrier diodes. It is a beamless version of the HSCH-9251 antiparallel pair beam lead diode.

**Applications**

The HSCH-9551 is a high-performance millimeter wave diode that can be used as a sub-harmonically pumped mixer or frequency multiplier in microwave and millimeter wave transceivers.

**Chip Size:** 620 × 325 µm (24.4 × 12.8 mils)

**Chip Size Tolerance:** ± 10 µm (± 0.4 mils)

**Chip Thickness:** 100 µm (4 mils)

**Chip Thickness Tolerance:** ± 15 µm (± 0.6 mils)

**Bond Pad Sizes:** 100 × 200 µm (3.9 × 7.9 mils)

---

This data sheet contains a variety of typical and guaranteed performance data. The information supplied should not be interpreted as a complete list of circuit specifications. In this data sheet the term typical refers to the 50th percentile performance. For additional information contact your local Agilent Technologies sales representative.
Notes:
