FORTHCOMING PAPERS

Letter to the Editor
Identification of novel ribonucleo–protein complexes from the brain-specific snoRNA MBII-52
Yuichi Soeno, Yuji Taya, Taras Stasyk, Lukas A. Huber, Takaaki Aoba, and Alexander Hüttelhofer

Bioinformatics
BarMap: RNA folding on dynamic energy landscapes
Ivo L. Hofacker, Christoph Flamm, Christian Heine, Michael T. Wolfinger, Gerik Scheuermann, and Peter F. Stadler
Corsen, a new software dedicated to microscope-based 3D distance measurements: mRNA-mitochondria distance, from single-cell to population analyses
Laurent Jourdren, Thierry Delaveau, Emeline Marquenet, Claude Jacq, and Mathilde Garcia

Articles
A two-length scale polymer theory for RNA loop free energies and helix stacking
Daniel P. Aalberts and Nagarajan Nandagopal
Single amino acid changes in the predicted RNase H domain of E. coli RNase G lead to complementation of RNase E deletion mutants
Dae-hwan Chung, Zhao Min, Bi-Cheng Wang, and Sidney R. Kushner
On the significance of an RNA tertiary structure prediction
Christine E. Hajdin, Feng Ding, Nikolay V. Dokholyan, and Kevin M. Weeks
Functional and molecular analysis of Eschericia coli strains lacking multiple DEAD-box helicases
Kevin L. Jagessar and Chaitanya Jain
Titers of lentiviral vectors encoding shRNAs and miRNAs are reduced by different mechanisms that require distinct repair strategies
Ying Poi Liu, Monique A. Vink, Jan-Tinus Westerink, Eva Ramirez de Arellano, Pavlina Konstantinova, Olivier ter Brake, and Ben Berkhout
Nucleocytoplasmic shuttling of the La-motif containing protein Sro9 might link its nuclear and cytoplasmic functions
Susanne Röther, Cornelia Burkert, Katharina M. Brünger, Andreas Mayer, Anja Kieser, and Katja Strößer
Genome-wide analysis of N1-methyl-adenosine modification in human tRNAs
Mridusmita Saikia, Ye Fu, Mariana Puvon-Eternod, Chuan He, and Tao Pan

Methods
Native mRNA antisense-accessible sites library for the selection of antisense oligonucleotides, PNAs, and siRNAs
Huafeng Fang, Yuefei Shen, and John-Stephen Taylor
Near-infrared (NIR) dye-labeled RNAs identify binding of ZBP1 to the noncoding Y3-RNA
Marcel Köhn, Marcell Lederer, Kristin Wächter, and Stefan Hüttelmaier
