Read this manual carefully before operating this watercraft. This manual should stay with the WaveRunner if it is sold.
Important manual information

To the owner/operator

Thank you for choosing a Yamaha watercraft. This owner’s/operator’s manual contains information you will need for proper operation, maintenance, and care. A thorough understanding of these simple instructions will help you to obtain maximum enjoyment from your new Yamaha. If you have any questions about the operation or maintenance of your watercraft, please consult a Yamaha dealer. In this manual, information of particular importance is distinguished in the following ways:

⚠️ This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

**WARNING**

A WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

**NOTICE**

A NOTICE indicates special precautions that must be taken to avoid damage to the watercraft or other property.

**TIP:**

A TIP provides key information to make procedures easier or clearer.

Because Yamaha has a policy of continuing product improvement, this product may not be exactly as described in this owner’s/operator’s manual. Specifications are subject to change without notice.

This manual should be considered a permanent part of this watercraft and should remain with it even if the watercraft is subsequently sold.

**General and important labels**

**Identification numbers**
Record the Primary Identification (PRI-ID) number, Hull Identification Number (HIN), and engine serial number in the spaces provided for assistance when ordering genuine parts from a Yamaha dealer. Also record and keep these ID numbers in a separate place in case your watercraft is stolen.

**Primary Identification (PRI-ID) number**
The PRI-ID number is stamped on a plate attached inside the engine compartment. (See page 44 for seat removal and installation procedures.)

**MODEL:**
VX1100-J (VX Sport)  
VX1100B-J (VX Deluxe)  
VX1100A-J (VX Cruiser)

**Hull Identification Number (HIN)**
The HIN is stamped on a plate attached to the aft deck.

**Engine serial number**
The engine serial number is stamped on a plate attached to the engine unit. (See page 44 for seat removal and installation procedures.)
General and important labels

Emission control information
This engine conforms to U.S. Environmental Protection Agency (EPA) and/or California Air Resources Board (CARB) regulations for marine SI engines applicable at the time of manufacture.
This engine is certified to operate on regular unleaded gasoline.

Approval label of emission control certificate
This label is attached to the top of the cylinder head. (See page 44 for seat removal and installation procedures.)

Manufactured date label
This label is attached to the top of the cylinder head. (See page 44 for seat removal and installation procedures.)

Star labels
This watercraft is labeled with a California Air Resources Board (CARB) star label. See below for a description of your particular label.
General and important labels

One Star - Low Emission
The one-star label identifies engines that meet the Air Resources Board’s Personal Watercraft and Outboard marine engine 2001 exhaust emission standards. Engines meeting these standards have 75% lower emissions than conventional carbureted two-stroke engines. These engines are equivalent to the U.S. EPA’s 2006 standards for marine engines.

Two Stars - Very Low Emission
The two-star label identifies engines that meet the Air Resources Board’s Personal Watercraft and Outboard marine engine 2004 exhaust emission standards. Engines meeting these standards have 20% lower emissions than One Star-Low Emission engines.

Three Stars - Ultra Low Emission
The three-star label identifies engines that meet the Air Resources Board’s Personal Watercraft and Outboard marine engine 2008 exhaust emission standards or the Sterndrive and Inboard marine engine 2003-2008 exhaust emission standards. Engines meeting these standards have 65% lower emissions than One Star-Low Emission engines.

Four Stars - Super Ultra Low Emission
The four-star label identifies engines that meet the Air Resources Board’s Sterndrive and Inboard marine engine 2009 exhaust emission standards. Personal Watercraft and Outboard marine engines may also comply with these standards. Engines meeting these standards have 90% lower emissions than One Star-Low Emission engines.
General and important labels

Important labels
Read the following labels before using this watercraft. If have any questions, consult a Yamaha dealer.
General and important labels

Warning labels
If any of these labels are damaged or missing, contact a Yamaha dealer for replacements.

WARNING

To reduce the risk of SEVERE INJURY or DEATH:

WEAR A PERSONAL FLotation DEVICE (PFD).
All riders must wear a Coast Guard approved PFD that is suitable for personal watercraft (PWC) use.

WEAR PROTECTIVE CLOTHING. Some internal injuries can occur if water is forced into body cavities or a result of falling into water or being near jet thrust nozzle. Normal footwear does not adequately protect against burntype water entry into ares of the body. All riders must wear a wet suit bottom or clothing that provides equivalent protection (See Owner’s Manual).

Footwear, gloves, and goggles/plex are recommended.

KNOW BOATING LAWS. Yamaha Motor Co., Ltd. recommends a minimum operator age of 16 years old. Know the operator age and training requirements for your state. A boating safety course is recommended and may be required in your state.

ATTACH ENGINE SHUT-OFF CORD (LANIARD) to wrist and keep it free from handlings so that engine stops if operator falls off. After riding, remove cord from PWC to avoid unauthorized use by children or others.

READ AND FOLLOW OWNER’S MANUAL

Collisions result in more INJURIES AND DEATHS than any other type of accident for personal watercraft (PWC).

TO AVOID COLLISIONS:

SCAN CONSTANTLY for people, objects, and other watercraft. Be alert for conditions that limit your visibility or blind your vision of others.

OPERATE DEFENSIVELY and keep a safe distance away from people, objects, and other watercraft.
• Do not follow directly behind PWC or other boats.
• Do not get near others to pick up or push them with water.

Avoid sharp turns or other maneuvers that make it hard for others to avoid you or understand where you are going.

Avoid areas with submerged objects or shallow water.

TAKE EARLY ACTION to avoid collisions. Remember, PWCs and other boats do not have brakes.

DO NOT RELEASE THROTTLE WHEN TRYING TO STEER away from objects: you need throttle to steer.
Always check throttle and steering controls for proper operation before starting PWC. Follow navigation rules and state/province and local laws that apply to PWC. See Owner’s Manual for more information.

WARNING

Gasoline is highly flammable and explosive. A fire or explosion could cause severe injury or death. Shut off engine. Refuel in well ventilated area away from flames or sparks. Do not smoke. Avoid spilling gasoline. Wipe up spilled gasoline immediately. Remove all tanks to ventilat fuel vapors from engine compartment before starting engine. Do not start engine if there is a fuel leak or loose electrical connections.

REGULAR UNLEADED GASOLINE ONLY
General and important labels

3

⚠️ WARNING
• Severe internal injuries can occur if water is forced into body cavities as a result of being near jet thrust nozzle.
• Wear a wetsuit bottom or clothing that provides equivalent protection.
• Do not board PWC if operator is applying throttle.

4

⚠️ WARNING
Do not use cleat or grips to lift PWC. PWC could fail, which could result in severe injury.

5

⚠️ WARNING
Breather hose
Be sure to connect breather hose to battery. Fire or explosion could result if not connected properly.

6

⚠️ WARNING / AVERTISSEMENT / 警告
Do not touch or remove electrical parts when starting or running the engine.

VX Deluxe / VX Cruiser:

7

⚠️ WARNING
REVERSE SHIFT LEVER OPERATION:
• Shift only while engine is idling or off.
• Reverse is for low speed maneuvering only.
• Do not use reverse function to slow down or stop PWC as it could cause you to lose control, be ejected, or impact landfills.
• Make sure that there are no obstacles or people behind you before shifting to reverse.

General and important labels

The following label indicates the correct direction to upright a capsized watercraft.

13

![Diagram of a watercraft with an arrow indicating the correct direction to upright it.](image)
Safety information

The safe use and operation of this watercraft is dependent upon the use of proper riding techniques, as well as upon the common sense, good judgment, and expertise of the operator. Every operator should know the following requirements before riding the watercraft.

- Before operating the watercraft, read this owner's/operator's manual, the Riding Practice Guide, the Riding Instruction card, and all labels on the watercraft. Also, watch the Basic Orientation Video provided with your watercraft. These materials should give you an understanding of the watercraft and its operation.
- Never allow anyone to operate this watercraft until they too have read this owner's/operator's manual, the Riding Practice Guide, the Riding Instruction card, and all labels, and, if possible, watched the Basic Orientation Video. Showing them the video may help reinforce the information contained in these materials.

Limitations on who may operate the watercraft

- Yamaha recommends a minimum operator age of 16 years old. Adults must supervise use by minors. Know the operator age and training requirements for your state. A boating safety course is recommended and may be required in your state. You can find local rules by contacting the United States Coast Guard (USCG), the National Association of State Boating Law Administrators, or your local Power Squadron.
- This watercraft is designed to carry the operator and up to 2 passengers. Never exceed the maximum load limit or allow more than 3 persons (or 2 persons if a water-skier is being pulled) to ride the watercraft at any time.

Maximum load:
240 kg (530 lb)
Load is the total weight of cargo, operator, and passengers.

- Do not operate the watercraft with any passengers on board until you have considerable practice and experience riding alone. Operating the watercraft with passengers requires more skill. Take the time to become accustomed to the handling charac-
Safety information

Characteristics of the watercraft before trying any difficult maneuvers.

Cruising limitations

- Scan constantly for people, objects, and other watercraft. Be alert for conditions that limit your visibility or block your vision of others.

- Operate defensively at safe speeds and keep a safe distance away from people, objects, and other watercraft.

- Do not follow directly behind watercraft or other boats.

- Do not go near others to spray or splash them with water.

- Avoid sharp turns or other maneuvers that make it hard for others to avoid you or understand where you are going.

- Avoid areas with submerged objects or shallow water.

- Take early action to avoid collisions. Remember, watercraft and other boats do not have brakes.

- Do not release the throttle lever when trying to steer away from objects—you need throttle to steer. Always check throttle and steering controls before starting the watercraft.

- Ride within your limits and avoid aggressive maneuvers to reduce the risk of loss of control, ejection, and collision.

- This is a high performance boat—not a toy. Sharp turns or jumping wakes or waves can increase the risk of back/spinal injury (paralysis), facial injuries, and broken legs, an-
Safety information

- Do not operate the watercraft in rough water, bad weather, or when visibility is poor; this may lead to an accident causing injury or death. Be alert to the possibility of adverse weather. Take note of weather forecasts and the prevailing weather conditions before setting out on your watercraft.
- As with any water sport, you should not operate your watercraft without someone else nearby. If you operate further than swimming distance from shore, you should be accompanied by another boat or watercraft, but make sure you stay a safe distance away. It’s good, common sense.
- Never operate in water that is less than 60 cm (2 ft) deep from the bottom of the watercraft, otherwise you increase your chance of hitting a submerged object, which could result in injury.
- This watercraft is not equipped with lighting required for night operation. Do not operate the watercraft after sunset or before dawn, otherwise you increase the risk of colliding with another boat, which could result in severe injury or death.
- Follow navigation rules, and state/provincial and local laws that apply to watercraft.
Operation requirements

- All riders must wear a U.S. Coast Guard (USCG) approved personal flotation device (PFD) that is suitable for personal watercraft use.
- Wear protective clothing. Severe internal injuries can occur if water is forced into body cavities as a result of falling into the water or being near the jet thrust nozzle. Normal swimwear does not adequately protect against forceful water entry into the rectum or vagina. All riders must wear a wetsuit bottom or clothing that provides equivalent protection. Such clothing includes thick, tightly woven, sturdy and snug-fitting apparel such as denim, but does not include spandex or similar fabrics, like those used in bicycle shorts.
- Eye protection is recommended to keep wind, water, and glare from the sun out of your eyes while you operate your watercraft. Restraining straps for eyewear are made which are designed to float should your eyewear fall in the water. Footwear and gloves are recommended.
- Helmets meeting Snell or DOT standards are required for USBA-sanctioned races. You must decide whether to wear a helmet while you ride for recreation. You should know that a helmet could help protect you in certain kinds of accidents and that it could injure you in others. A helmet is designed to provide some head protection. Although helmets cannot protect against all foreseeable impacts, a helmet might reduce your injuries in a collision with a boat or other obstacle. A helmet may have potential safety hazards, as well. Falling into the water could risk the chance of the helmet catching water, commonly known as "bucketing", and the resulting strain on your neck could cause choking, severe and permanent neck injuries, or death. A helmet could also increase the risk of an accident if it reduces your vision or hearing, or if it distracts you or increases your fatigue.

How should you decide if a helmet's potential safety benefits outweigh its potential risks for you? Consider your particular riding conditions. Consider factors such as your riding environment and your riding style and ability. Also consider the likelihood of traffic congestion, and the water surface conditions.

If you decide to wear a helmet based upon your riding circumstances, choose one carefully. Look for a helmet designed for personal watercraft use, if possible. Consider a helmet meeting Snell or DOT standards. If you will be engaging in closed-course competition, follow the helmet requirements of the sanctioning organization.

- Never operate the watercraft after consuming alcohol or taking other drugs.
- For reasons of safety and proper care of the watercraft, always perform the pre-operation checks listed on page 56 before operating the watercraft.
Safety information

- The operator and passengers should always keep their feet on the floor of the footwell when the watercraft is in motion. Lifting your feet increases the chances of losing your balance, or hitting objects outside the watercraft with your feet. Do not give a ride to children if their feet cannot reach the floor of the footwell.
- The passengers should hold on firmly, either to the person in front of them or to the handgrip provided.
- Never allow a passenger to ride in front of the operator.
- Always consult your doctor on whether it is safe for you to ride this watercraft if you are pregnant or in poor health.
- Do not attempt to modify this watercraft. Modifications to your watercraft may reduce safety and reliability, and render the watercraft unsafe or illegal for use.
- Attach the engine shut-off cord (lanyard) to your left wrist and keep it free from the handlebars so that the engine stops if you, the operator, fall off. After riding, remove the engine shut-off cord (lanyard) from the watercraft to avoid accidental starting or unauthorized use by children or others.
- Scan carefully for swimmers and stay away from swimming areas. Swimmers are hard to see and you could accidentally hit someone in the water.
- Avoid being hit by another boat. You should always take the responsibility to watch for traffic; other boaters may not be watching for you. If they do not see you, or if you maneuver more quickly than other boaters expect, you risk a collision.
- Maintain a safe distance from other boats and watercraft, and also watch for ski ropes or fishing lines. Obey the “Rules of the Road” and be sure to check behind you before making a turn. (See “Rules of the Road” on page 18.)
- According to the USCG, boats under 6.1 m (20 ft) in length like your watercraft must carry a fire extinguisher of a B-1 classification, with a capacity of two pounds or more when navigating in waters under USCG jurisdiction. In addition, most state and local
Safety information

boating laws also require that the fire extinguisher be approved by the USCG.

Recommended equipment

The following items should be carried on board your watercraft:

- Sound-signaling device
  You should carry a whistle or other sound-signaling device that can be used to signal other boats. See “Rules of the Road” for more information.

- Visual distress signals
  It is recommended that a U.S. Coast Guard approved pyrotechnic device be stored in a waterproof container on your watercraft. A mirror can also be used as an emergency signal. Contact a Yamaha dealer or the U.S. Coast Guard for more information.

- Watch
  A watch is helpful so you will know how long you have been operating the watercraft.

- Towline
  A towline can be used to tow a disabled watercraft in an emergency.
Safety information

Hazard information
- Never start the engine or let it run for any length of time in an enclosed area. Exhaust fumes contain carbon monoxide, a colorless, odorless gas that may cause loss of consciousness and death within a short time. Always operate the watercraft in an open area.
- Do not touch the hot oil tank, muffler, or engine during or immediately after engine operation; they can cause serious burns.

Watercraft characteristics
- Jet thrust turns the watercraft. Releasing the throttle lever completely produces only minimum thrust. If you are traveling at speeds above trolling, you will have rapidly decreasing ability to steer without throttle. This model is equipped with the Yamaha Engine Management System (YEMS) that includes an off-throttle steering (OTS) system. It will activate at planing speeds should you attempt to steer the watercraft after releasing the throttle lever. The OTS system assists in turning by continuing to supply some thrust while the watercraft is decelerating, but you can turn more sharply if you apply throttle while turning the handlebars. The OTS system does not function below planing speeds or when the engine is off. Once the engine slows down, the watercraft will no longer turn in response to handlebar input until you apply throttle again or you reach trolling speed. Practice turning in an open area without obstacles until you have a good feel for this maneuver.
- VX Sport: This watercraft is water-jet propelled. The jet pump is directly connected to the engine. This means that jet thrust will produce some movement whenever the engine is running. There is no “neutral” position.
- VX Deluxe / VX Cruiser: This watercraft is water-jet propelled. The jet pump is directly connected to the engine. This means that jet thrust will produce some movement whenever the engine is running. There is no “neutral” position. You are in either “forward” or “reverse”, depending upon the shift lever position.
- VX Deluxe / VX Cruiser: Do not use the reverse function to slow down or stop the wa-

VX Deluxe / VX Cruiser: Do not use the reverse function to slow down or stop the wa-

VX Deluxe / VX Cruiser: Do not use the reverse function to slow down or stop the wa-
Safety information

Do not ride a PWC as it could cause you to lose control, be ejected, or impact the handlebars. This could increase the risk of back/spinal injury (paralysis), facial injuries, and broken legs, ankles, and other bones. You could also damage the shift mechanism.

- VX Deluxe / VX Cruiser: Reverse can be used to slow down or stop during slow-speed maneuvering, such as when docking. Once the engine is idling, shift into reverse and gradually increase engine speed. Make sure that there are no obstacles or people behind you before shifting into reverse.

- Keep away from the intake grate while the engine is on. Items such as long hair, loose clothing, or PFD straps can become entangled in moving parts, resulting in severe injury or drowning.

- Never insert any object into the jet thrust nozzle while the engine is running. Severe injury or death could result from coming into contact with the rotating parts of the jet pump.

- Stop the engine and remove the clip from the engine shut-off switch before removing any debris or weeds, which may have collected around the jet intake.

![Diagram of safety features]

2 Engine shut-off switch
Safety information

Water-skiing

You can use the watercraft for water-skiing if it has the seating capacity to carry the operator, a rearward-facing spotter, and the water-skier when he or she is not skiing.

The watercraft must also have a cleat designed to pull a ski rope; do not attach the rope to any other location.

It is the watercraft operator’s responsibility to be alert to the safety of the water-skier and others. Know and follow all state and local water-skiing regulations in effect for the waters in which you will be operating.

The operator should be comfortable carrying passengers before attempting to pull a skier.

The following are some important considerations for minimizing risks while water-skiing.

- The skier should wear an approved PFD, preferably a brightly colored one so boat operators can see the skier.
- The skier should wear protective clothing. Severe internal injuries can occur if water is forced into body cavities as a result of falling into the water. Normal swimwear does not adequately protect against forceful water entry into the rectum or vagina. The skier should wear a wetsuit bottom or clothing that provides equivalent protection.
- A second person should be on board as a spotter to watch the skier; in most states it is required by law. Let the skier direct the operator’s control of speed and direction with hand signals.
- The spotter should sit astride the rear of the seat and hold onto the handgrip with both feet firmly on the floor of the footwell for proper balance while facing to the rear to watch the skier’s hand signals and condition.

- Your control while pulling a water-skier is affected by the skier’s ability, as well as water and weather conditions.
- When preparing to pull a skier, operate the watercraft at the slowest possible speed until the watercraft is well away from the skier and slack in the ski rope is taken up.
Safety information

Make sure that the rope is not looped around anything.
After checking that the skier is ready and that there is no traffic or other obstacles, apply enough throttle to raise the skier.
- Make smooth, wide turns. The watercraft is capable of very sharp turns, which could exceed the abilities of the skier. Keep the skier at least 50 m (150 ft), about twice the distance of a standard ski rope, from any potential hazard.
- Be alert to the hazard of the ski rope handle snapping back at the watercraft when the skier falls or is unable to get up on the skis.
- Towing heavy or bulky objects other than skiers, such as another boat or watercraft, can cause loss of steering control and create a hazardous condition. If you must tow another boat in an emergency situation, operate slowly and cautiously.

Rules of the Road

Your Yamaha watercraft is legally considered a powerboat. Operation of the watercraft must be in accordance with the rules and regulations governing the waterway on which it is used.
Just as there are rules that apply when you are driving on streets and highways, there are waterway rules that apply when you are operating your watercraft. These rules are used internationally, and are also enforced by the United States Coast Guard and local agencies. You should be aware of these rules, and follow them whenever you encounter another vessel on the water.
Several sets of rules prevail according to geographic location, but are all basically the same as the International Rules of the Road. The rules presented here in this owner’s/operator’s manual are condensed, and have been provided for your convenience only. Consult your local U.S. Coast Guard Auxiliary or Department of Motor Vehicles for a complete set of rules governing the waters in which you will be operating your watercraft.

Steering and sailing rules
Whenever two vessels on the water meet one another, one vessel has the right-of-way; it is called the “stand-on” vessel. The vessel that does not have the right-of-way is called the “give-way” or “burdened” vessel. These rules determine which vessel has the right-of-way, and what each vessel should do.

Stand-on vessel
The vessel with the right-of-way has the duty to continue its course and speed, except to avoid an immediate collision. When you maintain your direction and speed, the other vessel will be able to determine how best to avoid you.
Safety information

Give-way vessel
The vessel which does not have the right-of-way has the duty to take positive and timely action to stay out of the way of the stand-on vessel. Normally, you should not cross in front of the vessel with the right-of-way. You should slow down or change directions briefly and pass behind the other vessel. You should always move in such a way that the operator of the other vessel can see what you are doing.

The General Prudential Rule regarding the right-of-way is that if a collision appears unavoidable, neither boat has the right-of-way. Both boats must avoid the collision. In other words, follow the standard rules except when a collision will occur unless both vessels try to avoid each other. If that is the case, both vessels become give-way vessels.

Rules when encountering vessels
There are three main situations that you may encounter with other vessels which could lead to a collision unless the Steering Rules are followed:

Meeting: you are approaching another vessel head-on
Crossing: you are traveling across another vessel’s path
Overtaking: you are passing or being passed by another vessel

In the following illustration, your watercraft is in the center. You should give the right-of-way to any vessels shown in the white area (you are the give-way vessel). Any vessels in the shaded area must yield to you (they are the give-way vessels). Both you and the meeting vessel must alter course to avoid each other.

Meeting
If you are meeting another power-driven vessel head-on, and are close enough to run the risk of collision, neither of you has the right-of-way. Both of you should alter course to avoid an accident. You should keep the other vessel on your port (left) side. This rule does not apply if both of you will clear one another if you continue on your set course and speed.

Crossing
When two power-driven vessels are crossing each other’s path close enough to run the risk of collision, the vessel which has the other on the starboard (right) side must keep out of the way of the other. If the other vessel is on your starboard (right) side, you must keep out of its way; you are the give-way vessel. If the other vessel is on your port (left) side, remember that you should maintain course and direction,
provided the other vessel gives you the right-of-way as it should.

**Overtaking**
If you are passing another vessel, you are the give-way vessel. This means that the other vessel is expected to maintain its course and speed. You must stay out of its way until you are clear of it. Likewise, if another vessel is passing you, you should maintain your speed and direction so that the other vessel can steer itself around you.

**Other special situations**
There are three other rules you should be aware of when riding your watercraft around other vessels.

**Narrow channels and bends**
When navigating in narrow channels, you should keep to the right when it is safe and practical to do so. If the operator of a power-driven vessel is preparing to go around a bend that may obstruct the view of other water vessels, the operator should sound a prolonged blast of four to six seconds on the whistle. If another vessel is around the bend, it too should sound the whistle. Even if no reply is heard, however, the vessel should still proceed around the bend with caution. If you navigate such waters with your watercraft, you will need to carry a portable air horn, available from local marine supply stores.

**Fishing vessel right-of-way**
All vessels fishing with nets, lines, or trawls are considered to be "fishing vessels" under the International Rules. Vessels with trolling lines are not considered fishing vessels. Fishing vessels have the right-of-way regardless of position. Fishing vessels cannot, however, impede the passage of other vessels in narrow channels.

**Sailing vessel right-of-way**
Sailing vessels should normally be given the right-of-way. The exceptions to this are:
1. When the sailing vessel is overtaking the power-driven vessel, the power-driven vessel has the right-of-way.
2. Sailing vessels should keep clear of any fishing vessel.
3. In a narrow channel, a sailing vessel should not hamper the safe passage of a power-driven vessel that can navigate only in such a channel.

**Reading buoys and other markers**
The waters of the United States are marked for safe navigation by the lateral system of buoyage. Simply put, buoys and markers have an arrangement of shapes, colors, numbers, and lights to show which side of the buoy a boater should pass on when navigating in a particular direction. The markings on these buoys are oriented from the perspective of being entered from seaward (the boater is going towards the harbor). Red buoys are passed on your starboard (right) side when proceeding from open water into the harbor, and black buoys are to your port (left) side. An easy way to remember the meaning of the colors is the phrase "red right returning". When navigating out of the harbor, your position with respect to the buoys should be reversed; red buoys should be to port and black buoys to starboard.
Safety information

Many bodies of water used by boaters are entirely within the boundaries of a particular state. The Uniform State Waterway Marking System has been devised for these waters. This system uses buoys and signs with distinctive shapes and colors to show regulatory or advisory information. These markers are white with black letters and orange borders. They signify speed zones, restricted areas, danger areas, and general information.
Safety information

Remember, markings may vary by geographic location. Always consult local boating authorities before riding your watercraft in unfamiliar waters.

To get more boating safety information

Be informed about boating safety. Additional publications and information can be obtained from many organizations, including the following.

United States Coast Guard
Consumer Affairs Staff (G-BC)
Office of Boating, Public, and Consumer Affairs
U.S. Coast Guard Headquarters
Washington, D.C. 20593-0001

Other sources
You can find local rules by contacting the National Association of State Boating Law Administrators, or your local Power Squadron.

Watercraft Education and Training
The Online Boating Safety Course, available through the watercraft section of the yamaha-motor.com website, is a free, 50 question learning course available to the public. Upon successful completion of 80 percent or better, the user can request a certificate of completion by mail or can download one immediately. The Online Boating Safety Course, provided by the Boat/US Foundation, is approved by the National Association of State Boating Law Administrators (NASBLA) and recognized by the United States Coast Guard. This course meets the education requirement for those states that recognize non-proctored, NASBLA-approved courses.

Yamaha is the watercraft industry’s leading manufacturer to build awareness and support for boating education. In 1997, Yamaha launched its GET W.E.T. (Watercraft Education and Training) initiative and has since reached out to over one million Americans promoting the benefits of boating education.
Enjoy your watercraft responsibly

You share the areas you enjoy when riding your watercraft with others and with nature. So your enjoyment includes a responsibility to treat these other people, and the lands, waters, and wildlife with respect and courtesy. Whenever and wherever you ride, think of yourself as the guest of those around you. Remember, for example, that the sound of your watercraft may be music to you, but it could be just noise to others. And the exciting splash of your wake can make waves others won’t enjoy.

Avoid riding close to shoreline homes and waterfowl nesting areas or other wildlife areas, and keep a respectful distance from fishermen, other boats, swimmers, and populated beaches. When travel in areas like these is unavoidable, ride slowly and obey all laws.

Proper maintenance is necessary to ensure that the exhaust emission and sound levels of your watercraft will continue to be within regulated limits. You have the responsibility to make sure that the recommended maintenance in this owner’s/operator’s manual is carried out.

Remember, pollution can be harmful to the environment. Do not refuel or add oil where a spill could cause damage to nature. Remove your watercraft from the water and move it away from the shoreline before refueling. Dispose of water and any fuel and oil residue in the engine compartment according to local regulations. And keep your surroundings pleasant for the people and wildlife that share the waterways: don’t litter.

When you ride responsibly, with respect and courtesy for others, you help ensure that our...
Safety information

waterways stay open for the enjoyment of a variety of recreational opportunities.
Description

Watercraft glossary

Trolling speed
“Trolling” is the lowest maneuvering speed. You are applying little or no throttle. The watercraft is down in the water, and there is no wake.

Sub-planing speed
“Sub-planing” is a medium speed. The bow of the watercraft is slightly up from the water surface, but you are still traveling through the water. There is a wake.

Planing speed
“Planing” is a faster speed. The watercraft is more level and is skimming on top of the water. There is a wake.

Bow
The front end of the watercraft.

Stern
The rear end of the watercraft.

Starboard
The right side of the watercraft when facing forward.

Port
The left side of the watercraft when facing forward.

Bilge water
Water that has collected in the engine compartment.

Yamaha Engine Management System (YEMS)
YEMS is an integrated, computerized management system that controls and adjusts ignition timing, fuel injection, engine diagnostics, and the off-throttle steering (OTS) system.

Control function operation

Watercraft control functions

Remote control transmitter (VX Deluxe / VX Cruiser)
The Yamaha Security System and Low RPM Mode settings can be selected by operating the remote control transmitter. (See page 31 for Yamaha Security System setting procedures and page 37 for Low RPM Mode activation procedures.)

1 Remote control transmitter

Since the watercraft is programmed to recognize the internal code from this transmitter only, the settings can only be selected with this transmitter.

If you accidentally lose your remote control transmitter or if it is not operating properly, contact a Yamaha dealer.

When operating the watercraft, always keep the transmitter with you, such as by storing it in the transmitter holder in the beverage holder, so that it is not lost.

NOTICE

- The remote control transmitter is not completely waterproof. Do not submerge the transmitter or operate it under water. If the transmitter is submerged, dry it with a soft, dry cloth, and then check that it is operating properly. If the transmitter is not operating properly, contact a Yamaha dealer.
- Keep the remote control transmitter away from high temperatures and do not place it in direct sunlight.
- Do not drop the remote control transmitter, subject it to strong shocks, or place any heavy items on it.
- Use a soft, dry cloth to clean the remote control transmitter. Do not use detergent, alcohol, or other chemicals.
- Do not attempt to disassemble the remote control transmitter yourself. Otherwise, the transmitter may not operate properly. If the transmitter needs a new battery, contact a Yamaha dealer. Refer to local hazardous waste regulations when disposing of transmitter batteries.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following
two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**NOTICE**

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the remote control transmitter.

Yamaha Security System (VX Deluxe / VX Cruiser)
The Yamaha Security System functions to help prevent unauthorized use or theft of the watercraft. The lock and unlock modes of the security system can be selected by operating the remote control transmitter that is included with this watercraft. The engine cannot be started if the lock mode of the security system is selected. The engine can only be started if the unlock mode is selected. (See page 30 for information on the remote control transmitter.)

**TIP:**
The Yamaha Security System settings can only be selected while the engine is stopped.

Yamaha Security System settings
The Yamaha Security System settings will be confirmed by the number of beeps when the remote control transmitter is operated, and by the “SECURITY” indicator light of the multifunction information center. (See page 39 for information on the multifunction information center.)

<table>
<thead>
<tr>

<td></td>
</tr>
<tr>
<td>Unlock (Low RPM Mode)</td>
<td>Comes on</td>
<td></td>
</tr>
</tbody>
</table>

**TIP:**
- The beeper sounds two times for the normal operation mode or three times for the Low RPM Mode. (See page 37 for Low RPM Mode activation procedures.)
- If the remote control transmitter is operated while the multifunction information center is in the standby state, the center will perform the initial operation, and then the setting is selected.

To select the lock mode:
Push the lock button on the remote control transmitter briefly. The beeper sounds once and the “SECURITY” indicator light blinks once, then goes off. This indicates the lock mode is selected.

**TIP:**
The beeper sounds two or three times and the “SECURITY” indicator light blinks once, then goes off. This indicates the lock mode is selected.
Control function operation

TY” indicator light blinks two or three times, then comes on. This indicates the unlock mode is selected.

Insert the clip under the engine shut-off switch before starting the engine.

1 "L-Mode" (unlock) button
2 “SECURITY” indicator light

Engine stop switch “ ”
The engine stop switch (red button) stops the engine when the switch is pushed.

Engine shut-off switch “ ”
The engine shut-off switch automatically stops the engine when the clip, on the end of the engine shut-off cord (lanyard), is removed from the switch, such as if the operator falls off the watercraft.

When the engine is not running, remove the clip from the engine shut-off switch to prevent accidental starting or unauthorized operation by children or others.

1 Engine stop switch
2 Clip
3 Engine shut-off cord (lanyard)

Start switch “ ”

Do not run the engine over 4000 r/min on land. Also, do not run the engine for more than 15 seconds without supplying water, otherwise the engine could overheat.

The start switch (green button) starts the engine when the switch is pushed. Release the start switch as soon as the engine starts to run. If the engine does not start...
Control function operation

in 5 seconds, release the switch, wait 15
seconds, and then try again. NOTICE: Never
push the start switch while the engine is
running. Do not operate the start switch
for more than 5 seconds, otherwise the
battery will be discharged and the engine
will not start. Also, the starter motor could
be damaged.

The engine will not start under any of the fol-
lowing conditions:

- Clip is removed from the engine shut-off
  switch.
- Throttle lever is squeezed.
- VX Deluxe / VX Cruiser: Lock mode of the
  Yamaha Security System has been select-
ed. (See page 31 for Yamaha Security Sys-
tem setting procedures.)

Throttle lever

The throttle lever increases the engine speed
when the lever is squeezed.

The throttle lever returns automatically to its
fully closed (idle) position when released.

Steering system

By turning the handlebars in the direction you
wish to travel, the angle of the jet thrust nozzle
is changed, and the direction of the watercraft
is changed accordingly.

1 Handlebar
2 Jet thrust nozzle
Control function operation

Since the strength of the jet thrust determines the speed and degree of a turn, throttle must always be applied when attempting a turn, except at trolling speed.

This model is equipped with the Yamaha Engine Management System (YEMS) that includes an off-throttle steering (OTS) system. It will activate at planing speeds should you attempt to steer the watercraft after releasing the throttle lever. The OTS system assists in turning by continuing to supply some thrust while the watercraft is decelerating, but you can turn more sharply if you apply throttle while turning the handlebars. The OTS system does not function below planing speeds or when the engine is off. Once the engine slows down, the watercraft will no longer turn in response to handlebar input until you apply throttle again or you reach trolling speed.

**Cooling water pilot outlet**

When the engine is running, some of the cooling water that is circulated in the engine is discharged from the cooling water pilot outlet.

There is a cooling water pilot outlet on the port (left) side of the watercraft. To check for proper operation of the cooling system, make sure that water is being discharged from the cooling water pilot outlet. If water is not being discharged from the outlet, stop the engine and check the jet intake for clogging. (See page 90 for information on the jet intake.)

**TIP:**
- It will take about 60 seconds for the water to reach the outlet after the engine is started.
- Water discharge may not be constant when the engine is running at idling speed. If this occurs, apply a little throttle to make sure that water discharges properly.

**Water separator**

The water separator prevents water from entering the fuel tank by collecting any water that has entered the fuel tank breather hose if the watercraft was capsized. If water has collected in the water separator, drain it by loosening the drain screw.
Control function operation

To drain water from the water separator:
(1) Place a drain pan or dry cloth under the water separator.
(2) Gradually loosen the drain screw to drain the water. Catch the draining water in the drain pan or soak it up with the dry cloth so that it does not spill into the engine compartment. If any water spills into the watercraft, be sure to wipe it up with a dry cloth.
(3) Securely tighten the drain screw until it stops.
Watercraft operation

Watercraft operation functions

Reverse system (VX Deluxe / VX Cruiser)

**WARNING**

- Do not use the reverse function to slow down or stop the watercraft as it could cause you to lose control, be ejected, or impact the handlebars.
- Make sure that there are no obstacles or people behind you before shifting into reverse.
- Do not touch the reverse gate while the shift lever is being operated, otherwise you could be pinched.

When the shift lever is moved to the reverse position, the reverse gate lowers and deflects the water jet being discharged from the jet thrust nozzle. This allows the watercraft to move in reverse.

To shift into reverse:
1. Release the throttle lever and let the engine speed return to idle.
2. Pull the shift lever rearward until it stops in the reverse position. The reverse gate will lower and the watercraft will start moving in reverse at trolling speed.

To shift into forward:
1. Release the throttle lever and let the engine speed return to idle.
2. Push the shift lever forward until it stops in the forward position. The reverse gate will rise and the watercraft will start moving forward at trolling speed.
Watercraft operation

Watercraft operation modes

Low RPM Mode (VX Deluxe / VX Cruiser)
The Low RPM Mode is a function that limits the maximum engine speed to approximately 90% of the maximum engine speed in the normal mode.
The Low RPM Mode can only be activated and deactivated by operating the remote control transmitter that is included with this watercraft. (See page 30 for information on the remote control transmitter.)

TIP:
The Low RPM Mode can only be activated when the engine is stopped in the unlock mode of the Yamaha Security System.

Activating and deactivating the Low RPM Mode
Activation of the Low RPM Mode will be confirmed by the number of beeps when the remote control transmitter is operated, and by the “L-MODE” indicator light of the multifunction information center. (See page 39 for information on the multifunction information center.)

TIP:
If the remote control transmitter is operated while the multifunction information center is in the standby state, the center performs the initial operation, and then the setting is selected.

To activate the Low RPM Mode:
Push the “L-Mode” (unlock) button on the remote control transmitter for more than 4 seconds. Once the beeper sounds three times and the “SECURITY” indicator light blinks three times, then comes on, the “L-MODE” indicator light comes on and the Low RPM Mode is activated.

TIP:
If the Low RPM Mode is activated immediately after the information display turns off, the “L-MODE” indicator light will not come on. The

<table>

1 Remote control transmitter
Watercraft operation

“L-MODE” indicator light will come on when the engine is started.

To deactivate the Low RPM Mode:
Push the “L-Mode” (unlock) button on the remote control transmitter for more than 4 seconds. Once the beeper sounds two times and the “SECURITY” indicator light blinks two times, then comes on, the “L-MODE” indicator light goes off and the Low RPM Mode is deactivated. When the Low RPM Mode is deactivated, the watercraft returns to the normal operation mode.
Instrument operation

Multifunction information center
The multifunction information center displays various watercraft information.

Multifunction information center initial operation
When the multifunction information center is activated, all of the display segments come on. After 2 seconds, the warning indicators in the information display go off, and then the center starts to operate normally.

If only the multifunction information center is activated, the “WARNING” indicator light blinks once.

TIP:
VX Deluxe / VX Cruiser: The “SECURITY” indicator light also comes on as part of the initial operation.

The “SECURITY” indicator light will go off when the engine is started.

Multifunction information center standby state
If the multifunction information center does not receive any operation input within 25 seconds after the engine stops, the center will turn off and enter a standby state. When the engine is started again, the displays return to their state before the center turned off, and then the center starts to operate normally.

Information display
The information display shows watercraft operating conditions.

Speedometer
The speedometer shows the watercraft speed against water. By switching the display units, the speed can be shown in kilometers per hour “km/h” or miles per hour “mph”.

1 Tachometer
2 Speedometer
3 Hour meter/voltmeter
4 Fuel level meter
5 Check engine warning indicator
6 Engine overheat warning indicator
7 Oil pressure warning indicator
8 Fuel level warning indicator
**Instrument operation**

**TIP:**
“mph” is selected as the display unit at the Yamaha factory.

The outer numbers × 1000 r/min and display segments on the meter show the engine speed.

The tachometer shows the engine speed.

To switch the speedometer display units:
Push the select button for at least 1 second, within 10 seconds after the multifunction information center is activated. The speedometer display changes.

**Hour meter/voltmeter**
The hour meter/voltmeter has both an hour meter function and a voltmeter function. By switching the meter, it can be used as either an hour meter or a voltmeter.

**TIP:**
The hour meter is selected at the Yamaha factory.

**Hour meter**
The hour meter shows the total number of hours that the engine has been running since the watercraft was new.

**TIP:**
The elapsed time will be kept even if the battery terminals have been disconnected.
**Instrument operation**

To switch to the hour meter from the voltmeter:
Push the select button for at least 1 second after the multifunction information center is activated for more than 10 seconds. The display switches to the hour meter from the voltmeter.

**Voltmeter**
The voltmeter shows the battery voltage. When the battery voltage is normal, the voltmeter displays approximately 12 volts. If the battery voltage has dropped significantly, “LO” is displayed on the voltmeter. If the battery voltage has risen significantly, “HI” is displayed. If “LO” or “HI” is displayed, immediately return to shore and have a Yamaha dealer service the watercraft.

To switch to the voltmeter from the hour meter:
Push the select button for at least 1 second after the multifunction information center is activated for more than 10 seconds. The display switches to the voltmeter from the hour meter.

**Fuel level meter**
The fuel level meter shows the amount of fuel remaining in the fuel tank. The amount of remaining fuel is shown using eight display segments, which disappear two at a time as the fuel level decreases.

**TIP:**
The accuracy of the fuel level meter varies depending on the operating conditions. Use this function as a reference only.

**Fuel level warning**
If the fuel remaining in the fuel tank drops to about 13 L (3.4 US gal, 2.9 Imp. gal), the lowest two fuel level segments, the fuel level warning indicator, and the “WARNING” indicator.
Instrument operation

If the fuel level warning is activated, refill the fuel tank as soon as possible. (See page 50 for information on filling the fuel tank.) After the fuel tank is refilled, the warning signals will be cleared when the engine is restarted.

**TIP:**
Push the select button on the multifunction information center to stop the buzzer.

**Oil pressure warning**
If the oil pressure drops significantly, the oil pressure warning indicator and the “WARNING” indicator light blink, and the buzzer sounds intermittently. At the same time, the maximum engine speed is limited.

If the oil pressure warning is activated, immediately reduce the engine speed, return to shore, and then make sure that water is being discharged from the cooling water pilot outlet while the engine is running. If there is no discharge of water, stop the engine, and then check the jet intake for clogging. (See page 90 for information on the jet intake.)

**Engine overheat warning**
If the engine temperature rises significantly, the engine overheat warning indicator and the “WARNING” indicator light blink, and the buzzer sounds intermittently. Then, the engine overheat warning indicator and the “WARNING” indicator light stop blinking and remain on, and the buzzer sounds continuously. At the same time, the maximum engine speed is limited.

If the engine overheat warning is activated, immediately reduce the engine speed, return to shore, and then make sure that water is being discharged from the cooling water pilot outlet while the engine is running. If there is no discharge of water, stop the engine, and then check the jet intake for clogging. (See page 90 for information on the jet intake.)

**NOTICE:**
If you cannot locate and correct the cause of the overheating, consult a Yamaha dealer. Continuing to operate at higher speeds...
Instrument operation

could result in severe engine damage.
[EC.000041]

**TIP:**
Push the select button on the multifunction information center to stop the buzzer.

**Check engine warning**
If a sensor malfunction or a short circuit is detected, the check engine warning indicator and the "WARNING" indicator light blink, and the buzzer sounds intermittently.

If the check engine warning is activated, immediately reduce the engine speed, return to shore, and have a Yamaha dealer check the engine.

**TIP:**
Push the select button on the multifunction information center to stop the buzzer.
Equipment operation

**Equipment**

**Seat**
The seat is removable. Remove the seat to access the engine compartment.

**VX Sport / VX Deluxe:**

1. Pull the seat latch up, and then lift up the rear of the seat.
2. Pull the seat rearward and remove it.

**VX Cruiser:**

To install the seat:
1. Insert the projections on the front of the seat into the stays on the deck.
Equipment operation

(2) Push the rear of the seat down to securely lock it in place.

Handgrip
The handgrip is used when boarding the watercraft from the water and when the spotter is facing rearward. WARNING! Do not use the handgrip to lift the watercraft. The handgrip is not designed to support the watercraft’s weight. If the handgrip breaks, the watercraft could fall, which could result in severe injury.

Reboarding step (VX Cruiser)
The reboarding step is used to assist in reboarding the watercraft from the water. When boarding the watercraft, push the reboarding step down until it stops. The step returns automatically to its original position when released. WARNING! Do not use the reboarding step to lift the watercraft. The reboarding step is not designed to support the watercraft’s weight. If the reboarding step breaks, the watercraft could fall, which could result in severe injury.

NOTICE
Use the reboarding step only to board the watercraft in the water. Do not use the reboarding step for any other purpose. The watercraft can be damaged.

Bow eye
The bow eye is used to attach a rope to the watercraft when transporting, mooring, or
towing it in an emergency. (See page 93 for information on towing the watercraft.)

**Stern eyes**
The stern eyes are used to attach a rope to the watercraft when transporting or mooring it.

**Cleat**
The cleat is used to attach a ski rope to the watercraft when pulling a water-skier. **WARNING! Do not use the cleat to lift the watercraft. The cleat is not designed to support the watercraft’s weight.** If the cleat breaks, the watercraft could fall, which could result in severe injury.

**Storage compartments**
This watercraft is equipped with the following storage compartments. The storage compartments are not designed to be waterproof. If you carry objects that must be kept dry, put them in a waterproof bag. Make sure that the storage compartments are closed securely before operating the watercraft.

**Bow storage compartment**
The bow storage compartment is located under the hood.
Equipment operation

To open the bow storage compartment:
Pull the hood latch up, and then lift up the rear of the hood.

To close the bow storage compartment:
Push the rear of the hood down to securely lock it in place.

To drain water from the bow storage compartment:
(1) Remove the drain plug on the bottom of the storage compartment to drain the water into the engine compartment.
(2) Securely install the drain plug in its original position.

Glove compartment
The glove compartment is located in front of the seat.
The glove compartment is removable.
Equipment operation

To open the glove compartment:
Slide the glove compartment latch toward you, and then lift up the lid.

To close the glove compartment:
Push the lid down to securely lock it in place.

Beverage holder (VX Deluxe / VX Cruiser)
The beverage holder is located in the glove compartment. (See page 47 for information on the glove compartment.)
The beverage holder is removable.

Do not place any items in the beverage holder while riding. Otherwise, the items may fall out of the beverage holder.

Fire extinguisher holder and cover
The fire extinguisher holder and cover are located in the bow storage compartment.
Equipment operation

To use the fire extinguisher holder and cover:

(1) Pull the hood latch up, and then lift up the rear of the hood.

(2) Unhook the band and remove the fire extinguisher cover.

(3) Place the fire extinguisher in the holder, and then place the cover over the fire extinguisher.

(4) Securely fasten the cover and the fire extinguisher with the band.

(5) Push the rear of the hood down to securely lock it in place. Make sure that the hood is securely closed before using the watercraft.

[Diagram of the equipment showing the hood latch and the band, along with the fire extinguisher holder and cover.]
Operation and handling requirements

Fuel requirements

**WARNING**
- Gasoline and gasoline vapors are extremely flammable. To avoid fires and explosions and to reduce the risk of injury when refueling, follow these instructions.
- Gasoline is poisonous and can cause injury or death. Handle gasoline with care. Never siphon gasoline by mouth. If you should swallow some gasoline, inhale a lot of gasoline vapor, or get some gasoline in your eyes, see your doctor immediately. If gasoline spills on your skin, wash with soap and water. If gasoline spills on your clothing, change your clothes.

**NOTICE**
- Do not use leaded gasoline. Leaded gasoline can seriously damage the engine.
- Avoid getting water and contaminants in the fuel tank. Contaminated fuel can cause poor performance and engine damage. Use only fresh gasoline that has been stored in clean containers.

Recommended fuel:
Regular unleaded gasoline with a minimum octane rating of
$$\text{Pump octane number} = \frac{(R + M)}{2}$$
$$90 \text{ (Research octane number)}$$

Gasohol
There are two types of gasohol: gasohol containing ethanol and that containing methanol. Gasohol containing ethanol can be used if ethanol content does not exceed 10% and the fuel meets the minimum octane ratings. E-85 is a fuel blend containing 85% ethanol and therefore must not be used in this watercraft. All ethanol blends containing more than 10% ethanol can cause fuel system damage or engine performance problems. Yamaha does not recommend gasohol containing methanol because it can cause fuel system damage and engine performance problems.

To fill the fuel tank:
1. Before refueling, stop the engine. Do not stand or sit on the watercraft. Never refuel while smoking, or while in the vicinity of sparks, open flames, or other sources of ignition.
2. Place the watercraft in a well-ventilated area and in a horizontal position.
3. Remove the seat, and then check the fuel level. (See page 44 for seat removal and installation procedures.)
4. Loosen the fuel filler cap and remove it.
5. Slowly add fuel to the fuel tank.
Operation and handling requirements

Fuel tank capacity: 60 L (15.9 US gal, 13.2 Imp.gal)

(6) Stop filling when the fuel level reaches approximately 50 mm (2 in) from the top of the fuel tank. Do not overfill the fuel tank. Because fuel expands when it heats up, heat from the engine or the sun can cause fuel to spill out of the fuel tank. Do not leave the watercraft with a full tank in direct sunlight.

(7) Wipe up any spilled fuel immediately with a dry cloth.

(8) Securely install the fuel filler cap by tightening it until it clicks.

(9) Securely install the seat in its original position.

Engine oil requirements

Engine oil

NOTICE
Use only 4-stroke engine oil. Usage of 2-stroke engine oil could result in severe engine damage.

Recommended engine oil:
- YAMALUBE 4W

Recommended engine oil type:
- SAE 10W-30, 10W-40, 20W-40, 20W-50

Recommended engine oil grade:
- API SE, SF, SG, SH, SJ, SL

Checking the engine oil level

WARNING
Engine oil is extremely hot immediately after the engine is turned off. Coming in contact with or getting any engine oil on your clothes could result in burns.

NOTICE
- Do not run the engine with too much or not enough oil in the oil tank, otherwise the engine could be damaged.
- Make sure that debris and water do not enter the oil tank filler hole. Debris and water in the engine oil can cause serious engine damage.

TIP:
- When checking the engine oil level on land, the engine must be running while water is being supplied to the cooling water passages. (See “Flushing the cooling water passages” on page 77 for information on supplying water.)
When checking the engine oil level on water, moor the watercraft so that it will not drift away.

To check the engine oil level:

1. With the engine stopped, place the watercraft in a precisely level position on land or launch the watercraft.
2. Look in all directions, and then start the engine. (See page 66 for information on starting the engine.)
3. Run the engine at idling speed for 6 minutes or more. Run the engine an additional 5 minutes if the ambient temperature is 20 °C (68 °F) or less.
4. Stop the engine.
5. Remove the seat. (See page 44 for seat removal and installation procedures.)
6. Loosen the oil tank filler cap and remove it, and then wipe the attached dipstick clean.

7. Screw the oil tank filler cap into the filler hole until it stops. Remove the oil tank filler cap again and make sure that the engine oil level is between the minimum and maximum level marks.

8. If the engine oil level is significantly above the maximum level mark, consult a Yamaha dealer. If the engine oil level is below the minimum level mark, slowly add engine oil.
9. Repeat steps 6–8 until the engine oil is at the proper level.
10. Securely install the oil tank filler cap and turn it until it stops.
11. Securely install the seat in its original position.
Draining the bilge water

Do not run the engine at full throttle when bilge water remains in the engine compartment. The bilge water can splash into the engine, which can result in severe damage.

Draining the bilge water on land
To drain the bilge water on land:
1. Loosen the stern drain plugs and remove them.
2. Raise the bow of the watercraft, such as by placing the watercraft on a slope, to drain the bilge water from the engine compartment.
3. After the bilge water has drained from the stern drain plug holes, wipe up any remaining moisture in the engine compartment with a dry cloth.
4. Securely install the stern drain plugs by tightening them until they stop. **NOTICE:** Before installing the stern drain plugs, clean the drain plug threads to remove any foreign materials, such as dirt or sand. Otherwise, the stern drain plugs could be damaged, allowing water to enter the engine compartment. Make sure that the stern drain plugs are tightened securely before launching the watercraft. Otherwise, water may flood the engine compartment and cause the watercraft to submerge.

Draining the bilge water on water
A small quantity of bilge water will remain in the engine compartment even after the bilge water is drained on water. To completely drain the bilge water, remove the watercraft from the water and drain the bilge water on land.

Jet vacuum bilge draining system
While the watercraft is operating, bilge water in the engine compartment is drawn in by the vacuum that is generated in the jet pump and discharged from the watercraft through the jet thrust nozzle.
To drain the bilge water on water:
Operate the watercraft as straight as possible and above planing speed for at least 2 minutes. **NOTICE:** Do not run the engine at full throttle for at least 1 minute after the engine has been restarted. Bilge water in the engine compartment can splash into the
Operation and handling requirements

Transporting on a trailer
When transporting the watercraft on a trailer, secure the tie downs to the trailer through the bow eye and stern eyes. **NOTICE:** Do not attach ropes or tie downs to any part of the watercraft other than the bow eye and stern eyes to secure the watercraft to the trailer. Otherwise, the watercraft may be damaged. Wrap the ropes or tie downs with towels or rags where they touch the body of the watercraft to avoid scratches or damage. VX Deluxe / VX Cruiser: Do not transport the watercraft with the shift lever in the reverse position. Otherwise, the reverse gate may hit an obstacle, which could cause damage.
First-time operation

Engine break-in

NOTICE

Failure to perform the engine break-in could result in reduced engine life or even severe engine damage.

The engine break-in is essential to allow the various components of the engine to wear and polish themselves to the correct operating clearances. This ensures proper performance and promotes longer component life.

To perform the engine break-in:

(1) Check the engine oil level. (See page 51 for information on checking the engine oil level.)

(2) Launch the watercraft and start the engine. (See page 66 for information on starting the engine.)

(3) For the first 5 minutes, operate with the engine at idling speed.

(4) For the next 30 minutes, operate with the engine speed below 5000 r/min.

(5) For the next 1 hour, operate with the engine speed below 6500 r/min.

After the engine break-in is complete, the watercraft can be operated normally.
**Pre-operation checks**

**WARNING**

Failure to inspect or maintain the watercraft properly increases the possibility of an accident or damage to the watercraft. Do not operate the watercraft if you find any problem. If a problem cannot be corrected by the procedures provided in this manual, have the watercraft inspected by a Yamaha dealer.

**Pre-operation checklist**

Before using this watercraft, be sure to perform the checks in the following checklist.

<table>

**TIP:**
To ensure safety and reliability, pre-operation checks should be made each time the watercraft is used.
Pre-operation checks

Pre-operation check points

Pre-launch checks
Perform the pre-launch checks in the pre-operation checklist while the watercraft is on land.
To perform the pre-launch checks:
1. Remove the seat. (See page 44 for seat removal and installation procedures.)
2. Perform the checks and make sure that there are no malfunctioning items or other problems.
3. After completing these checks, securely install the seat in its original position.

Engine compartment check

WARNING
Failure to ventilate the engine compartment could result in a fire or explosion. Do not start the engine if there is a fuel leak.
Ventilate the engine compartment. Leave the engine compartment open for a few minutes to allow any fuel vapors to escape.
Make sure that there is no damage inside the engine compartment.

Fuel system checks

WARNING
Leaking fuel can result in fire or explosion.
Check for fuel leakage regularly.
If any fuel leakage is found, the fuel system must be repaired by a qualified mechanic. Improper repairs can make the watercraft unsafe to operate.
Make sure that there is no damage, leakage, or other problem in the fuel system.

Check:
1. Fuel filler cap and seal for damage
2. Fuel tank for damage and leakage
3. Fuel hoses and joints for damage and leakage
4. Fuel tank breather hose for damage and leakage

Fuel level check
Check the fuel level in the fuel tank.
Add fuel if necessary. (See page 50 for information on filling the fuel tank.)

Water separator check
Make sure that no water has collected in the water separator. If water has collected in the water separator, drain it. (See page 34 for information on draining the water separator.)

Engine unit check
Check the exterior of the engine unit for damage or other problem.

Engine oil level check
Make sure that the engine oil level is between the minimum and maximum level marks on...
Pre-operation checks

the dipstick attached to the oil tank filler cap. (See page 51 for information on checking the engine oil level.)

1 Oil tank filler cap/Dipstick

1 Dipstick
2 Maximum level mark
3 Minimum level mark

Bilge water check
Make sure that no bilge water has collected in the engine compartment. If bilge water has collected in the engine compartment, drain it. (See page 53 for information on draining the bilge water.)

Battery checks
Make sure that the battery terminals and breather hose are not damaged and that the battery leads and breather hose are connected properly. WARNING! Fire or explosion could result if the breather hose is damaged, obstructed, or not connected properly. (EWJ0441)

WARNING! Fire or explosion could result if the breather hose is damaged, obstructed, or not connected properly. (EWJ0441)

1 Negative (–) battery terminal: Black lead
2 Positive (+) battery terminal: Red lead
3 Breather hose

Make sure that the electrolyte level is between the minimum and maximum level marks. WARNING! Never operate the watercraft if the battery does not have sufficient power to start the engine or if it shows any other signs of decreased power. Loss of battery power may leave you stranded. (EWJ01240)

1 Maximum level mark
2 Minimum level mark

Make sure that the battery is securely held in place.

Steering system checks
Turn the handlebars to the right and left several times to make sure that operation is smooth and unrestricted throughout the
Pre-operation checks

Turn the handlebars as far as possible to the right and left to make sure that the jet thrust nozzle moves as the handlebars are turned, and that there is no difference between the right and left fully turned positions of the jet thrust nozzle.

Difference between fully turned positions of jet thrust nozzle (distances A and B): Maximum 5 mm (0.20 in)

WARNING
Do not touch the reverse gate while the shift lever is being operated, otherwise you could be pinched.
Pre-operation checks

Operate the shift lever several times to make sure that operation is smooth throughout the whole range. Also, make sure that the reverse gate moves up and down according to the operation of the shift lever and that the gate makes contact with the stoppers. (See page 36 for reverse system operation.)

Make sure that the throttle lever returns automatically to its fully closed (idle) position when released.

Throttle lever checks
Operate the throttle lever several times to make sure that operation is smooth throughout the whole range. Also, make sure that the throttle lever is free when released.

Make sure that there is the proper amount of throttle lever free play when the throttle lever is in the fully closed (idle) position.

Throttle lever free play:
4.0–7.0 mm (0.16–0.28 in)

Remote control transmitter check
(VX Deluxe / VX Cruiser)
Make sure that the remote control transmitter operates properly. (See page 31 for Yamaha Security System setting procedures and page 37 for Low RPM Mode activation procedures.)

Engine shut-off cord (lanyard) check
Make sure that the engine shut-off cord (lanyard) is not damaged. If the cord is damaged, replace it. WARNING! Never try to repair the engine shut-off cord (lanyard) or tie it.
Pre-operation checks

The engine shut-off cord (lanyard) may not pull free when the operator falls off, allowing the watercraft to continue to run and cause an accident.

NOTICE

Do not run the engine over 4000 r/min on land. Also, do not run the engine for more than 15 seconds without supplying water, otherwise the engine could overheat.

Check the start switch, the engine stop switch, and the engine shut-off switch for proper operation. (See pages 32 to 32 for information on operating each switch.)

To check the operation of the switches:

1. VX Deluxe / VX Cruiser: If the lock mode is selected for the Yamaha Security System setting, select the unlock mode. (See page 31 for Yamaha Security System setting procedures.)
2. Push the start switch to make sure that the engine starts.
3. As soon as the engine starts running, push the engine stop switch to make sure that the engine stops immediately.
4. Restart the engine, and then pull the engine shut-off cord (lanyard) to remove the clip from the engine shut-off switch to make sure that the engine stops immediately.

Storage compartment checks

Make sure that the storage compartments are not damaged and that water has not collected in the compartments. (See page 46 for information on the storage compartments.)

Fire extinguisher holder, cover, and band checks

Make sure that the fire extinguisher holder, cover, and band are not damaged and that the cover is securely held in place using the band. (See page 48 for information on the fire extinguisher holder, cover, and band.)

1. Engine shut-off switch
2. Clip
3. Start switch
4. Engine stop switch
5. Engine shut-off cord (lanyard)
Pre-operation checks

**Fire extinguisher check**
Check that there is a full fire extinguisher on board.

To check the fire extinguisher, see the instructions supplied by the fire extinguisher manufacturer. Always keep the fire extinguisher secured in the holder with its cover in place. Always carry a fire extinguisher on board. A fire extinguisher is not standard equipment with this watercraft. If you do not have one, contact a Yamaha dealer or a fire extinguisher dealer to obtain one meeting the proper specifications.

Fire extinguisher:
Classification: B-1
Capacity: 2 lb or more

**Safety equipment check**
Check that safety equipment meeting the applicable regulations is on board.

**Hull and deck check**
Check the hull and deck for damage or other problem.

**Jet intake checks**
Make sure that the jet intake is not damaged or clogged with weeds or debris. If the jet intake is clogged, clean it. (See page 90 for information on the jet intake.)

**Stern drain plug checks**
Loosen the stern drain plugs and remove them, and then make sure that the plugs are not damaged and that there is no foreign material on the threads. **NOTICE:** Before installing the stern drain plugs, clean the drain plug threads to remove any foreign materials, such as dirt or sand. Otherwise, the stern drain plugs could be damaged, allowing water to enter the engine compartment. Make sure that the stern drain plugs are tightened securely before launching the watercraft. Otherwise, water may flood the engine compartment and cause the watercraft to submerge. 

Securely install the stern drain plugs by tightening them until they stop.

1 Stern drain plug
Pre-operation checks

Hood check
Push down on the rear of the hood and make sure that it is securely closed.

Post-launch checks
Perform the post-launch checks in the pre-operation checklist while the watercraft is in the water and the engine is running.
To perform the post-launch checks:
(1) Launch the watercraft. (See page 66 for information on launching the watercraft.)
(2) Perform the checks and make sure that there are no malfunctioning items or other problems.

Cooling water pilot outlet check
Make sure that water is discharged from the cooling water pilot outlet while the engine is running. (See page 34 for information on the cooling water pilot outlet.)

Multifunction information center check
Make sure that the multifunction information center operates properly. (See page 39 for information on proper operation of the multifunction information center.)

Engine idling speed check
Start the engine and warm it up. Use the tachometer in the multifunction information center to make sure that the engine idling speed is not significantly above or below the specified range.

Engine idling speed: 1650 ±50 r/min
Operation

Operating your watercraft

WARNING
Before operating your watercraft, become familiar with all of the controls. Consult a Yamaha dealer about any control or function that you do not fully understand. Failure to understand how the controls work could cause an accident or prevent you from avoiding an accident.

Getting to know your watercraft
Operating your watercraft requires skills acquired through practice over a period of time. Take the time to learn the basic techniques well before attempting more difficult maneuvers.

Operating your new watercraft can be a very enjoyable activity, providing you with hours of pleasure. However, it is essential to familiarize yourself with the operation of the watercraft to achieve the skill level necessary to enjoy riding safely.

Before operating this watercraft, read this owner’s/operator’s manual, the Riding Practice Guide, the Riding Instruction card, and all labels on the watercraft. Pay particular attention to the safety information beginning on page 9. Also, watch the Basic Orientation Video provided with your watercraft. These materials should give you an understanding of the watercraft and its operation.

Remember: This watercraft is designed to carry the operator and up to 2 passengers. Never exceed the maximum load limit or allow more than 3 persons (or 2 persons if a water-skier is being pulled) to ride the watercraft at any time.

Maximum load:
240 kg (530 lb)
Load is the total weight of cargo, operator, and passengers.

Learning to operate your watercraft
Before operating the watercraft, always perform the pre-operation checks listed on page 56. The short time spent checking the watercraft will reward you with added safety and reliability.

Check state and local laws before operating your watercraft.
Operate defensively at safe speeds and keep a safe distance away from people, objects, and other watercraft. Select a wide area to learn in, where there is good visibility and light boat traffic.

Use the buddy system—operate with someone nearby. Scan constantly for people, objects, and other watercraft. Be alert for conditions that limit your visibility or block your vision of others.
You should grip the handlebars firmly and keep both feet on the floor of the footwell. Do not attempt to ride with passengers until your operating skills are fully developed.
Operation

Riding position
Operator riding position
The operator should grip the handlebars firmly with both hands and sit astride the seat with both feet on the floor of the footwell.

Passenger riding position
The passenger(s) should hold on firmly, either to the person in front of them or to the handgrip provided, and sit astride the seat with their feet on the floor of the footwell. Never allow a passenger to ride in front of the operator. (See page 17 for information on the riding position when pulling a water-skier.)

Launching the watercraft
When launching the watercraft, make sure that there are no obstacles around you. If the watercraft is launched from a trailer, someone should make sure that waves do not push the watercraft into the trailer.

Starting the engine on water
WARNING
Do not apply throttle when anyone is at the rear of the watercraft. Turn the engine off or keep it at idle. Water and debris exiting the jet thrust nozzle can cause severe injury.

To start the engine:
(1) VX Deluxe / VX Cruiser: If the lock mode is selected for the Yamaha Security System setting, select the unlock mode. (See page 31 for Yamaha Security System setting procedures.)

(2) Move the watercraft to an area that is free from weeds and debris, and has a water depth of at least 60 cm (2 ft) from the bottom of the watercraft. NOTICE: Never run the engine in water that is less than 60 cm (2 ft) deep from the bottom of the watercraft, otherwise pebbles or sand could be sucked into the jet intake, causing impeller damage and engine overheating. [ECJ00472]

(3) Attach the engine shut-off cord (lanyard) to your left wrist, and then attach the clip to the engine shut-off switch. (See page 32 for information on operating the engine shut-off switch.) WARNING! Check that the engine shut-off cord (lanyard)
Operation

is attached correctly. If the engine shut-off cord (lanyard) is not attached correctly, it may not pull free when the operator falls off, allowing the watercraft to continue to run and cause an accident. [EWJ00581]

1 Clip
2 Engine shut-off switch
3 Engine shut-off cord (lanyard)

(4) With the throttle lever released, push the start switch (green button) to start the engine. (See page 32 for information on operating the start switch.)

Leaving the watercraft

If leaving the watercraft, remove the clip from the engine shut-off switch to prevent accidental starting or unauthorized operation by children or others.

Stopping the engine

Release the throttle lever, and then push the engine stop switch (red button) to stop the engine. WARNING! You need throttle to steer. Shutting the engine off can cause you to hit an obstacle you are attempting to avoid. A collision could result in severe injury or death. [EWJ00601]

Operating the watercraft

VX Sport:

When the engine is running, the watercraft will move forward at trolling speed even if the
throttle lever is in the fully closed (idle) position.

VX Deluxe / VX Cruiser:
When the shift lever is in the forward position and the engine is running, the watercraft will move forward. The watercraft will move forward at trolling speed even if the throttle lever is in the fully closed (idle) position. (See page 36 for information on operating the shift lever.)

WARNING
- Do not release the throttle lever when trying to steer away from objects—you need throttle to steer. A collision could result in severe injury or death.
- When operating at higher speeds, make gradual turns or slow down before turning. Sharp high-speed turns may cause the watercraft to slide sideways or spin, throwing the operator and passenger(s) overboard, which could cause an injury.

Steering control depends on the combination of handlebar position and the amount of throttle.
Water sucked in through the intake grate is pressurized by the impeller in the jet pump. As the pressurized water is expelled from the pump through the jet thrust nozzle, it creates thrust to move and steer the watercraft. The higher the engine speed, the more thrust produced.
The amount of jet thrust, in addition to the position of the handlebars, determines how sharply you turn.
A. More throttle produces higher thrust, so the watercraft will turn more sharply.
Operation

B. Less throttle produces lower thrust, so the watercraft will turn more gradually.

C. Releasing the throttle lever completely produces only minimum thrust. If you are traveling at speeds above trolling, you will have rapidly decreasing ability to steer without throttle. You may still have some turning ability immediately after releasing the throttle lever, but once the engine slows down, the watercraft will no longer respond to handlebar input until you apply throttle again or you reach trolling speed. At trolling speed, the watercraft can be turned gradually by handlebar position alone using just the amount of thrust available at idle.

D. If the engine is stopped while riding, there is no thrust. The watercraft will go straight even though the handlebars are turned.

You need throttle to steer. This model is equipped with the Yamaha Engine Management System (YEMS) that includes an off-throttle steering (OTS) system. It will activate at planing speeds should you attempt to steer the watercraft after releasing the throttle lever (see condition C above). The OTS system assists in turning by continuing to supply some thrust while the watercraft is decelerating, but you can turn more sharply if you apply throttle while turning the handlebars. The OTS system does not function below planing speeds or when the engine is off. Once the engine slows down, the watercraft will no longer turn in response to handlebar input until you apply throttle again or you reach trolling speed.

Stopping the watercraft
The watercraft is not equipped with a separate braking system. It is stopped by water resistance when the throttle lever is released. From full speed, the watercraft comes to a complete stop in approximately 100 m (330 ft) after the throttle lever is released or the engine is stopped, although this distance will vary depending on many factors, including gross weight, water surface conditions, and wind direction. The watercraft slows down as
soon as the throttle lever is released, but will coast for a distance before fully stopping. If you are not sure you can stop in time before hitting an obstacle, apply throttle and turn in another direction.

**WARNING**

- Allow adequate stopping distance.
- Take early action to avoid collisions. Remember, watercraft and other boats do not have brakes.
- Operate defensively at safe speeds and keep a safe distance away from people, objects, and other watercraft to give you time to stop.
- Do not shut the engine off when slowing down in case you need engine power to steer away from a boat or other obstacle that comes into your path.
- VX Deluxe / VX Cruiser: Do not use the reverse function to slow down or stop the watercraft as it could cause you to lose control, be ejected, or impact the handlebars.

Operating the watercraft in reverse (VX Deluxe / VX Cruiser)

Pull the shift lever rearward to the reverse position. The watercraft will move in reverse.

(See page 36 for information on the reverse system.)

Make sure that there are no obstacles or people behind you before shifting into reverse.

**WARNING**

Be sure the operator and any passengers have practiced boarding from the water while still close to shore before riding. A person who has made many unsuccessful attempts to get back on the watercraft may become fatigued and suffer from exposure, increasing the risk of injury and drowning.

Boarding the watercraft

Board the watercraft in water free from weeds and debris and at least 60 cm (2 ft) deep from the bottom of the watercraft. **NOTICE:** Never
run the engine in water that is less than 60 cm (2 ft) deep from the bottom of the watercraft, otherwise pebbles or sand could be sucked into the jet intake, causing impeller damage and engine overheating.

**TIP:**

VX Cruiser: This watercraft is equipped with a reboarding step, which can be lowered and used to assist in reboarding. (See page 45 for information on operating the reboarding step.)

**Boarding alone**

1. From the rear of the watercraft, place both hands on the boarding platform, pull yourself up, and then grasp the handgrip with one hand.
2. Pull yourself up to a kneeling position on the boarding platform, and then move to the seat and sit astride.
3. Attach the engine shut-off cord (lanyard) to your left wrist, and then attach the clip to the engine shut-off switch.
4. Grip the handlebars with both hands and place both feet on the floor of the footwell.
5. Look in all directions, start the engine, and then start off slowly.

**Boarding with passenger(s)**

**WARNING**

Severe internal injuries can occur if water is forced into body cavities as a result of being near the jet thrust nozzle. Do not apply throttle until the passengers are seated with their feet on the floor of the footwell and are securely holding on to the person
in front of them or to the handgrip provided.

The heavier the total weight of the operator and passenger(s), the more difficult it will be to balance the watercraft. Do not operate the watercraft when the total weight exceeds 240 kg (530 lb) including any cargo.

To board at a standstill:
(1) Board as noted in the previous section “Boarding alone”.

(2) Attach the engine shut-off cord (lanyard) to your left wrist, and then attach the clip to the engine shut-off switch.
(3) Grip the handlebars with both hands and place both feet on the floor of the footwell.
(4) Have the first passenger move to the rear of the watercraft.

(5) Have the first passenger board using the same procedure as the operator, place their feet on the floor of the footwell, and securely hold on to the operator.
(6) Have the second passenger follow the same procedure. When the second passenger is boarding, try to balance the watercraft together with the first passenger.

(7) Make sure that the passenger(s) have their feet on the floor of the footwell and are securely holding on to the person in front of them or to the handgrip provided.
Operation

(8) Look in all directions, start the engine, and then start off slowly.

To board when it is difficult to balance at a standstill:

(1) Have the passenger(s) steady the watercraft, and then board as noted in the previous section “Boarding alone”.

(2) Grip the handlebars with both hands, place both feet on the floor of the footwell, and balance there.

(3) Have the first passenger board using the same procedure as the operator, place their feet on the floor of the footwell, securely hold on to the operator, and balance there.

(4) Attach the engine shut-off cord (lanyard) to your left wrist, and then attach the clip to the engine shut-off switch.

(5) Look in all directions, and then start the engine and operate at trolling speed.

(6) Have the second passenger pull themselves up onto the boarding platform into a kneeling position and balance there. Look in all directions, and then gradually accelerate. Then, have the second passenger crawl onto the seat while maintaining their balance.

(7) Have the second passenger sit astride the seat, place their feet on the floor of the footwell, securely hold on to the person in front of them or to the handgrip provided, and balance there.

(8) Make sure that the passenger(s) have their feet on the floor of the footwell and are securely holding on to the person in front of them or to the handgrip provided, and then gradually increase the speed to balance the watercraft.

starting off

WARNING

To avoid collisions:

- Scan constantly for people, objects, and other watercraft. Be alert for conditions that limit your visibility or block your vision of others.
Operation

- Operate defensively at safe speeds and keep a safe distance away from people, objects, and other watercraft.
- Do not follow directly behind watercraft or other boats. Do not go near others to spray or splash them with water. Avoid sharp turns or other maneuvers that make it hard for others to avoid you or understand where you are going. Avoid areas with submerged objects or shallow water.
- Take early action to avoid collisions. Remember, watercraft and other boats do not have brakes. Do not release the throttle lever when trying to steer away from objects—you need throttle to steer.

**NOTICE**

Never run the engine in water that is less than 60 cm (2 ft) deep from the bottom of the watercraft, otherwise pebbles or sand could be sucked into the jet intake, causing impeller damage and engine overheating.

**NOTICE**

Starting off from a trailer
VX Sport:
(1) Launch the watercraft, and then turn it around so that the bow faces the direction you wish to go.

(2) Attach the engine shut-off cord (lanyard) to your left wrist, and then attach the clip to the engine shut-off switch.
(3) Look in all directions, start the engine, and then start off slowly.

**VX Deluxe / VX Cruiser:**
(1) Launch the watercraft move the shift lever to the reverse position. (See page 36 for information on the reverse system.)
(2) Attach the engine shut-off cord (lanyard) to your left wrist, and then attach the clip to the engine shut-off switch.
(3) Look in all directions, start the engine, and then start off slowly.

**NOTICE**

Starting off from a trailer
VX Deluxe / VX Cruiser:
(1) Launch the watercraft move the shift lever to the reverse position. (See page 36 for information on the reverse system.)
(2) Attach the engine shut-off cord (lanyard) to your left wrist, and then attach the clip to the engine shut-off switch.
(3) Look in all directions, start the engine, and then start off slowly.

**WARNING**

Improper uprighting can cause injury.
- Be sure to shut the engine off by pulling on the engine shut-off cord (lanyard) to
Operation

remove the clip from the engine shut-off switch.

- Do not put your hands in the intake grate.

If the watercraft capsizes, turn it over immediately.

To upright the watercraft:

1. Remove the clip from the engine shut-off switch.
2. Swim to the rear of the watercraft. Turn the watercraft over clockwise by pulling on the ride plate with your left hand while pushing down on the gunwale with your right hand or foot.
3. If the port (left) side of the capsized watercraft is tilting up, push down on the gunwale so that the port (left) side is down before turning the watercraft clockwise. **NOTICE:** Do not turn the watercraft over counterclockwise, otherwise water can enter the engine, which can result in severe damage.

(3) Start the engine and operate the watercraft at planing speed to drain the bilge water from the engine compartment. (See page 53 for information on draining the bilge water. If the engine does not start, see “Towing the watercraft” on page 93 or “Submerged watercraft” on page 93.) **NOTICE:** Do not run the engine at full throttle for at least 1 minute after the engine has been restarted. Bilge water in the engine compartment can splash into the engine, which can result in severe damage.

Beaching and docking the watercraft

To beach the watercraft:

1. Make sure that there are no boats, swimmers, or obstacles near the beach.
(2) Release the throttle lever to reduce speed about 100 m (330 ft) before you reach the intended beaching area.

(3) Slowly approach the beach and stop the engine just before reaching land.  
WARNING! You need throttle to steer. Shutting the engine off can cause you to hit an obstacle you are attempting to avoid. A collision could result in severe injury or death.  
NOTICE: Never run the engine in water that is less than 60 cm (2 ft) deep from the bottom of the watercraft, otherwise pebbles or sand could be sucked into the jet intake, causing impeller damage and engine overheating.  
EWJ00601

(4) Get off the watercraft and pull it up on the beach.

To dock the watercraft:

(1) Make sure that there are no boats, swimmers, or obstacles near the dock.

(2) Release the throttle lever to reduce speed about 100 m (330 ft) away from the dock.

(3) Slowly approach the dock and stop the engine just before coming alongside it.  
WARNING! You need throttle to steer. Shutting the engine off can cause you to hit an obstacle you are attempting to avoid. A collision could result in severe injury or death.  
EWJ00601

(4) Come alongside the dock and get off the watercraft.

Operating in weeded areas
Always avoid using your watercraft in areas where weed growth is thick. If operating in weeded areas is unavoidable, alternately squeeze the throttle lever and relax your grip on the throttle lever to vary the engine speed. Weeds tend to become clogged more when operating at a steady speed and at trolling speed. If weeds may have clogged the intake area, clean the jet intake. (See page 90 for information on the jet intake.)  
EJU40241

After removing the watercraft from the water
ECJ19130

NOTICE
Do not run the engine over 4000 r/min on land. Also, do not run the engine for more than 15 seconds without supplying water, otherwise the engine could overheat.

After operating and removing the watercraft from the water, promptly discharge the remaining water from the cooling water passages.

To discharge water from the cooling water passages:

(1) Make sure that the area around the watercraft is clear, and then start the engine.

(2) Discharge the remaining water out of the cooling water passages by alternately squeezing and releasing the throttle lever quickly for 10 to 15 seconds.

(3) Stop the engine.
Care and storage

Post-operation care

**WARNING**
Always place the watercraft upright in a horizontal position when storing it, otherwise fuel could leak out into the engine or engine compartment, which could create a fire hazard.

After using the watercraft, always take it out of the water, clean it, and store it. Leaving the watercraft in the water for extended periods will accelerate the rate of normal deterioration of the jet pump and hull. Marine organisms and corrosion are some of the conditions that can shorten the life of many watercraft components.

Flushing the cooling water passages

**NOTICE**
Do not run the engine over 4000 r/min on land. Also, do not run the engine for more than 15 seconds without supplying water, otherwise the engine could overheat.

Flush the cooling water passages to prevent them from clogging with salt, sand, or dirt.

1. Place the watercraft in a horizontal position.
2. Remove the seat. (See page 44 for seat removal and installation procedures.)
3. Connect the garden hose adapter to a garden hose.
4. Loosen the flushing hose connector cap and remove it. Insert the garden hose adapter into the flushing hose connector and turn it until it is securely connected.
5. Connect the garden hose to a water tap.
6. Make sure that the area around the watercraft is clear, and then start the engine. Immediately after the engine starts, fully turn the water supply on so that water
flows out continually from the jet thrust nozzle.

(7) Run the engine at idling speed for about 3 minutes watching the engine condition. If the engine stops while flushing, turn the water supply off immediately and perform the procedure again from step 6. **NOTICE:** Do not supply water to the cooling water passages when the engine is not running. The water could flow back through the muffler into the engine, causing severe engine damage. [ECJ00122]

(8) Turn the water supply off.

(9) Discharge the remaining water out of the cooling water passages by alternately squeezing and releasing the throttle lever quickly for 10 to 15 seconds.

(10) Stop the engine.

(11) Remove the garden hose adapter, and then securely install the flushing hose connector cap by tightening it until it stops.

(12) Securely install the seat in its original position.

**Cleaning the watercraft**

(1) Remove the seat. (See page 44 for seat removal and installation procedures.)

(2) If the watercraft will be stored for a week or more, rustproof the internal engine components to help prevent corrosion. (See page 82 for information on rustproofing the internal engine components.)

(3) Rinse the engine and engine compartment with a small amount of water. **NOTICE:** Do not use high-pressure water when rinsing the engine or engine compartment as severe engine damage could result. [ECJ00257]

(4) Drain the water from the engine compartment. (See page 53 for information on draining the bilge water.)

(5) Wipe the engine and engine compartment with a dry cloth.

(6) Wash down the hull, deck, and jet pump with fresh water.

(7) Wipe the hull, deck, and jet pump with a dry cloth.

(8) Wipe all vinyl and rubber components, such as the seat and engine compartment seals, with a vinyl protectant such as Yamaha Protectant.

(9) To minimize corrosion, spray metallic parts of the hull, deck, and engine with a rust inhibitor such as Yamaha Silicone Protectant and Lubricant.

(10) Allow the engine compartment to air dry completely before installing the seat.

(11) Securely install the seat in its original position.

**Battery care**

If the watercraft will not be used for more than a month, remove the battery from the watercraft, check it, and then store it in a cool, dry place.

**WARNING**

Battery electrolyte is poisonous and dangerous, causing severe burns, etc. Electrolyte contains sulfuric acid. Avoid contact with skin, eyes, or clothing.
Care and storage

Antidotes
External: Flush with water.
Internal: Drink large quantities of water or milk. Follow with milk of magnesia, beaten egg, or vegetable oil. Call a physician immediately.

Eyes: Flush with water for 15 minutes and get prompt medical attention.

Batteries produce explosive gases. Keep sparks, flames, cigarettes, etc., well away. If using or charging the battery in an enclosed space, make sure that it is well ventilated. Always shield your eyes when working near batteries.

Keep out of the reach of children.

To remove the battery:
1. Disconnect the negative (–) battery lead.
2. Disconnect the positive (+) battery lead.
3. Disconnect the breather hose.
4. Unhook the battery bands, and then remove the battery from the watercraft.

Checking the battery
- Make sure that the battery case is not damaged.
- Make sure that the battery terminals are not corroded or damaged.

Checking the electrolyte level
Make sure that the electrolyte level is between the maximum and minimum level marks.
If the electrolyte level is low, add distilled water to raise it to the specified level. NOTICE: Use only distilled water for replenishing the battery, otherwise battery life could be shortened.

If distilled water was added, check the battery voltage.
It is recommended to have a Yamaha dealer check the battery voltage and charge the battery. If you charge the battery yourself, be sure to read and follow the instructions provided with the battery tester and charger you use. NOTICE: Do not attempt to charge a battery hastily. Battery life could be shortened.
Care and storage

Checking the battery bands
Make sure that the battery bands are not damaged.

1 Battery band

To store the battery:
(1) Clean the battery case using fresh water.
(2) If the battery terminals are dirty or corroded, clean them using a wire brush.
(3) Apply YAMALUBE MARINE GREASE to the battery terminals.
(4) Store the battery in a cool, dry place.

NOTICE: Storing the battery in an uncharged condition can cause permanent battery damage. Check the battery periodically.

To install the battery:
(1) Place the battery in the battery compartment and hook the battery bands onto the holders.
(2) Connect the positive (+) battery lead (red) to the positive (+) battery terminal. NOTICE: Reversal of the battery leads will damage the electrical parts.
(3) Connect the negative (−) battery lead (black) to the negative (−) battery terminal.
(4) Connect the breather hose to the battery. WARNING! Fire or explosion could result if the breather hose is damaged, obstructed, or not connected properly.
(5) Make sure that the battery is securely held in place.

Recommended water-resistant grease:
YAMALUBE MARINE GREASE
Long-term storage

WARNING
Always place the watercraft upright in a horizontal position when storing it, otherwise fuel could leak out into the engine or engine compartment, which could create a fire hazard.

Storage for long periods of time, such as winter storage, requires preventive maintenance to ensure against deterioration. It is advisable to have the watercraft serviced by a Yamaha dealer prior to storage. However, the following procedures can be performed easily by the owner.

Cleaning
(1) Flush the cooling water passages. (See page 77 for information on flushing the cooling water passages.)

TIP:
If you will be storing the watercraft for a prolonged period, such as winter storage, top off the fuel tank with fresh gasoline and add one ounce of Yamaha Fuel Stabilizer and Conditioner to each gallon of fuel in the fuel tank before starting the engine.
(2) Clean the watercraft. (See page 78 for information on cleaning the watercraft.) Wax the hull with a non-abrasive wax such as Yamaha Silicone Wax.

Lubrication
Use a Yamaha Power Cable Luber and spray Yamaha Lube-Zall between the inner and outer cables to lubricate the cables and purge out any dirt and moisture.
To keep moving parts sliding or rotating smoothly, lubricate them with water-resistant grease.

Recommended water-resistant grease:
YAMALUBE MARINE GREASE
Care and storage

- VX Deluxe / VX Cruiser:
  Shift cable (reverse gate end)

Rustproofing

Rustproofing the hull, deck, and engine
Spray metallic parts of the hull, deck, and engine with a rust inhibitor such as Yamaha Silicone Protectant and Lubricant.

Rustproofing the internal engine components
Rustproof the internal engine components with a rust inhibitor such as Yamaha Stor-Rite Engine Fogging Oil.

To rustproof the internal engine components:
(1) Remove the seat. (See page 44 for seat removal and installation procedures.)
(2) Loosen the clamp screw and disconnect the air intake duct.
(3) Spray a rust inhibitor such as Yamaha Stor-Rite Engine Fogging Oil into the intake opening for 3 seconds. **WARNING!** Do not spray flammable rust inhibitor products on engine surfaces while the engine is hot. The sprayed substance or propellants could catch fire. [EWJ00261]
(4) Connect the air intake duct and securely tighten the clamp screw.
(5) Make sure that the area around the watercraft is clear, and then start the engine in a well-ventilated area and let it run at idle for 15 seconds. (See page 32 for information on starting the engine.)
(6) Stop the engine.
(7) Securely install the seat in its original position.
Maintenance

Periodic checks and lubrication will keep your watercraft in the safest and most efficient condition possible. Therefore, make sure to carry out the periodic maintenance. Safety is an obligation of the watercraft owner. Proper maintenance must be carried out to keep the exhaust emission and sound levels within the regulated limits. The most important points of watercraft inspection and lubrication are explained on the following pages.

See a Yamaha dealer for genuine Yamaha replacement parts and optional accessories designed for your watercraft.

Remember, failures that are the result of the installation of parts or accessories which are not qualitatively equivalent to genuine Yamaha parts are not covered by the limited warranty.

Maintenance, replacement, or repair of the emission control devices and system may be performed by any marine SI engine repair establishment or individual. Warranty repair, however, must be performed at an authorized Yamaha marine dealership.

**WARNING**

Be sure to turn off the engine when you perform maintenance unless otherwise specified. If you are not familiar with machine servicing, this work should be done by a Yamaha dealer or other qualified mechanic.

A service manual is available for purchase through a Yamaha dealer for owners who have the mechanical skills, tools, and other equipment necessary to perform maintenance not covered by this owner's/operator's manual.

**Tool kit**

A tool kit is included with this watercraft. Place the tool kit in a waterproof bag and always carry it with you whenever you use the watercraft.

1 Tool bag
2 Screwdriver
3 16 mm box wrench
4 Garden hose adapter
5 10/12 mm box wrench
6 Pliers
7 Open-end wrench
### Periodic maintenance chart

The periodic maintenance chart gives general guidelines for periodic maintenance. Have a Yamaha dealer perform the checks in the following chart. However, maintenance may need to be performed more frequently depending on your operating conditions. If you have any questions, consult a Yamaha dealer.

This "○" mark indicates items to be checked and serviced by a Yamaha dealer.

**WARNING**

Engine oil is extremely hot immediately after the engine is turned off. Coming in contact with or getting any engine oil on your clothes could result in burns.

**NOTICE**

Do not run the engine with too much or not enough oil in the engine, otherwise the engine could be damaged.

It is recommended to have a Yamaha dealer change the engine oil and the engine oil filter. However, if you choose to change the oil and filter on your own, consult a Yamaha dealer.
Specifications

Watercraft capacity:
Maximum people on board:
3 person
Maximum load capacity:
240 kg (530 lb)

Dimensions:
Length:
- VX Sport 3220 mm (126.8 in)
- VX Deluxe 3220 mm (126.8 in)
- VX Cruiser 3270 mm (128.7 in)
Width:
1170 mm (46.1 in)
Height:
1160 mm (45.7 in)
Dry weight:
- VX Sport 334 kg (736 lb)
- VX Deluxe 337 kg (743 lb)
- VX Cruiser 340 kg (750 lb)

Performance:
Maximum fuel consumption:
28.1 L/h (7.4 US gal/h, 6.2 Imp.gal/h)
Cruising range at full throttle:
2.14 hour
Trolling speed:
1650 ± 50 r/min

Engine:
Engine type:
Liquid cooled 4-stroke, DOHC
Number of cylinders:
4
Engine displacement:
1052 cm³
Bore & stroke:
76.0 × 58.0 mm (2.99 × 2.28 in)
Compression ratio:
11.4 : 1
Valve clearance-intake (cold):
0.11–0.20 mm (0.0043–0.0079 in)
Valve clearance-exhaust (cold):
0.25–0.34 mm (0.0098–0.0134 in)
Lubrication system:
Dry sump
Cooling system:
Water
Starting system:
Electric

Ignition system:
T.C.I.
Spark plug:
CR9EB
Spark plug gap:
0.7–0.8 mm (0.028–0.031 in)
Battery capacity:
12 V, 19.0 Ah
Charging system:
Flywheel magneto

Drive unit:
Propulsion system:
Jet pump
Jet pump type:
Axial flow, single stage
Impeller rotation:
Counterclockwise
Jet thrust nozzle angle:
24.0°±24.0°

Fuel and oil:
Recommended fuel:
Regular unleaded gasoline
Minimum octane rating (PON):
86
Minimum octane rating (RON):
90
Recommended engine oil type SAE:
SAE 10W-30, 10W-40, 20W-40, 20W-50
Recommended engine oil grade API:
API SE,SF,SG,SH,SJ,SL
Fuel tank total capacity:
60 L (15.9 US gal, 13.2 Imp.gal)
Engine oil quantity with oil filter replacement:
2.2 L (2.33 US qt, 1.94 Imp.qt)
Engine oil quantity without oil filter replacement:
2.0 L (2.11 US qt, 1.76 Imp.qt)
Engine oil total quantity:
4.3 L (4.55 US qt, 3.78 Imp.qt)
# Troubleshooting

If you have any trouble with your watercraft, use the troubleshooting chart to check for the possible cause.

If you cannot find the cause, consult a Yamaha dealer.

## Troubleshooting chart

Confirm the possible cause and remedy, and then refer to the applicable page.

Trouble recovery

Emergency procedures

Cleaning the jet intake and impeller

WARNING
Before attempting to remove weeds or debris from the jet intake or impeller area, shut the engine off and remove the clip from the engine shut-off switch. Severe injury or death could result from coming in contact with the rotating parts of the jet pump.

If weeds or debris gets caught in the jet intake or impeller, cavitation can occur, causing jet thrust to decrease even though engine speed rises. If this condition is allowed to continue, the engine will overheat and may seize. NOTICE: If weeds or debris gets caught in the jet intake, do not operate the watercraft above trolling speed until they have been removed.

If there is any sign that the jet intake or impeller is clogged with weeds or debris, return to shore and check the intake and impeller. Always stop the engine before beaching the watercraft.

(1) Place a suitable clean cloth or carpeting underneath the watercraft to protect it from abrasions and scratches. Turn the watercraft on its side as shown. NOTICE: Always turn the watercraft over onto its port (left) side. When turning the watercraft on its side, support the bow so that the handlebars are not bent or damaged.
Trouble recovery

(2) Remove any weeds or debris from around the jet intake, drive shaft, impeller, jet pump housing, and jet thrust nozzle.
If debris is difficult to remove, consult a Yamaha dealer.

Jumping the battery
If the watercraft battery has run down, the engine can be started using a 12-volt booster battery and jumper cables.

Connecting the jumper cables

**WARNING**
To avoid battery explosion and serious damage to the electrical system:
- Do not reverse the polarity of the jumper cables when connecting to the batteries.
- Do not connect the negative (−) jumper cable to the negative (−) terminal of the watercraft battery.
- Do not touch the positive (+) jumper cable to the negative (−) jumper cable.

(1) Connect the positive (+) jumper cable to the positive (+) battery terminals of both batteries.
(2) Connect one end of the negative (−) jumper cable to the negative (−) battery terminal of the booster battery.
(3) Connect the other end of the negative (−) jumper cable to an engine hanger.
(4) Start the engine, and then disconnect the jumper cables by reversing the steps above. (See page 32 for information on starting the engine.)

Replacing the fuses
If a fuse is blown, replace it with the proper fuse.

</tbody>
</table>

To replace a fuse:
(1) Remove the seat. (See page 44 for seat removal and installation procedures.)
Trouble recovery

(2) Loosen the cap on the electrical box and remove it.

(3) Replace the blown fuse with the spare fuse of the correct amperage by using the fuse puller on the reverse side of the cap. **WARNING! Do not use fuses of a different amperage than recommended. Substitution with a fuse that has an improper rating can cause extensive electrical system damage and possible fire.**

1 Electrical box
2 Cap

1 Spare fuse
2 Fuse
3 Cap

1 Fuse puller

Fuse amperage:
- Battery fuse: 30 A
- Main relay drive fuse: 10 A
- Electronic throttle valve fuse: 10 A
- Security system fuse: 3 A
- Main fuse: 20 A

(4) Securely install the cap by tightening it until it stops.

(5) Securely install the seat in its original position.
Trouble recovery

If the fuse immediately blows again, the electrical system may be defective. If this occurs, have a Yamaha dealer service the watercraft.

**Towing the watercraft**

**WARNING**

- The operator of the towing boat must keep speed to a minimum and avoid traffic or obstacles which could be a hazard to the operator on the watercraft.
- The towline should be long enough so that the watercraft will not collide with the towing boat when slowing down.

If the watercraft becomes inoperative in the water, it can be towed to shore.

To tow the watercraft:

Use a towline that is three times the combined length of the towing boat and the watercraft.

1. Securely attach the towline to the bow eye of the watercraft being towed.

   1 Bow eye

2. Sit astride the seat and hold on to the handlebars in order to balance the watercraft. **NOTICE:** The bow must be kept up out of the water during towing, otherwise water could flood the engine compartment or water could flow back into the engine, causing severe engine damage.

   Tow the watercraft at 8 km/h (5 mph) or less. **NOTICE:** Tow the watercraft at 8 km/h (5 mph) or less, otherwise water could flood the engine compartment or water could flow back into the engine, causing severe engine damage.

**Submerged watercraft**

If the watercraft is submerged or flooded with water, drain the bilge water from the engine compartment. Then, have a Yamaha dealer service the watercraft as soon as possible.

If the watercraft was submerged:

1. Remove the watercraft from the water and drain the water from the storage compartments. (See page 46 for information on draining the storage compartments.)

2. Drain the bilge water from the engine compartment. (See page 53 for information on draining the bilge water.)

3. Have the watercraft serviced by a Yamaha dealer as soon as possible. **NOTICE:** Be sure to have a Yamaha dealer inspect the watercraft. Otherwise, serious engine damage could result.
Limited warranty

YAMAHA MOTOR CORPORATION, U.S.A.
WATERCRAFT LIMITED WARRANTY

Yamaha Motor Corporation is proud of its heritage and reputation for producing products with high standards of quality and workmanship. Product excellence provides the cornerstone for our commitment to customer satisfaction. The Yamaha Watercraft Limited Warranty is your assurance of this commitment.

This warranty provides you with protection against the expense of repairs for your watercraft that are required as a result of defects in materials or workmanship. When maintained and utilized in the prescribed manner, you can count on your Yamaha watercraft to provide reliable service.

This warranty provides you with specific coverage and notes your responsibilities in maintaining and operating your watercraft. Please take the time to read and become familiar with this warranty.

PERIOD OF WARRANTY. Any new Yamaha watercraft purchased for pleasure use from an authorized Yamaha dealer in the United States, will be warranted against defects in material or workmanship for a period of one (1) year from date of purchase, subject to exclusions noted herein. Any Yamaha Watercraft purchased and utilized for commercial applications will be warranted for a period of ninety (90) days from the date of purchase, subject to exclusions noted herein. Replacement parts used in warranty repairs will be warranted for the balance of the applicable warranty period.

The warranty described here applies to watercrafts purchased and registered for use in the United States only. For warranty provisions outside the United States, contact the particular country's local Yamaha distributor.

OBTAINING REPAIRS UNDER WARRANTY. During the period of warranty, any authorized Yamaha dealer will, free of charge, repair or replace, at Yamaha's option, any parts adjudged defective by Yamaha due to faulty workmanship or material from the factory. All parts replaced under warranty will become the property of Yamaha Motor Corporation, U.S.A.

CUSTOMER'S RESPONSIBILITY. Under terms of this warranty, the customer will be responsible for ensuring that the watercraft is properly operated, maintained, and stored as specified in the applicable Owner's/Operator's Manual.

The owner of the watercraft shall give notice to an authorized Yamaha dealer of any and all apparent defects within ten (10) days of discovery and make the watercraft available at that time for inspection and repairs at the dealer's place of business.

GENERAL EXCLUSIONS FROM WARRANTY. This warranty will not cover the repair of damage if the damage is a result of abuse or neglect of the product. Examples of abuse and neglect include, but are not limited to:
1. Racing or competition use, modification of original parts abnormal strain.
2. Lack of proper maintenance and off-season storage as described in the Owner's/Operator's Manual, installation of parts or accessories that are not equivalent in design and quality to genuine Yamaha parts.
3. Use of lubricants, oils, and fuel/oil mixtures that are not suitable for watercraft motor use.
4. Damage as a result of accidents, collisions, contact with foreign materials, or submersion.
5. Growth of marine organisms on motor or hull surfaces.
7. Gel coat stress cracks.

SPECIFIC PARTS EXCLUDED FROM WARRANTY.

Parts replaced due to normal wear or routine maintenance such as oil, spark plugs, fuel filters, impeller and liner, and anodes are not covered by warranty. Charges for transporting the watercraft to and from an authorized Yamaha dealer are excluded from warranty coverage.

TRANSFER OF WARRANTY. Transfer of the warranty from the original purchaser to any subsequent purchaser is possible by having the watercraft inspected by an authorized Yamaha dealer and requesting the dealer to submit a claim of registration to Yamaha Motor Corporation, U.S.A. within ten (10) days of the transfer.

EMISSION CONTROL WARRANTY. Yamaha warrants to the ultimate purchaser and any subsequent owner, that the emission control components on this engine are designed, built and equipped so as to conform at the time of sale with applicable regulations under section 213 of the Clean Air Act and that this engine is free from defects in materials and workmanship which cause said engine to fail to conform with applicable regulations for thirty (30) months from the date of purchase or 175 hours of operation, whichever comes first, and, for evaporative emission components, for twenty-four (24) months from the date of purchase. Some states have different emission control warranty provisions. As these vary from state to state, consult your Yamaha dealer or contact Yamaha Customer Relations at 1-800-962-7926 for more information.

YAMAHA MOTOR CORPORATION, U.S.A. MAKES NO OTHER WARRANTY OF ANY KIND, EXPRESSED OR IMPLIED. ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE WHICH EXCEED THE OBLIGATIONS AND TIME LIMITS STATED IN THIS WARRANTY ARE HEREBY DISCLAIMED BY YAMAHA MOTOR CORPORATION, U.S.A. AND EXCLUDED FROM THIS WARRANTY.

SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU. ALSO EXCLUDED FROM THIS WARRANTY ARE ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES INCLUDING LOSS OF USE. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE EXCLUSION MAY NOT APPLY TO YOU.
Consumer information

THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.

YAMAHA MOTOR CORPORATION, U.S.A.
Cypress, California 90630

WARRANTY QUESTIONS AND ANSWERS

Q. What costs are my responsibility during the warranty period?
A. The customer's responsibility includes all costs of normal maintenance services, non-warranty repairs, accident and collision damages.

Q. What are some examples of "abnormal" strain, neglect, or abuse?
A. These terms are general and overlap each other in areas. Specific examples include:
- Running the watercraft out of oil
- Operating the machine with a broken or damaged part which causes another part to fail, and so on. If you have any specific questions on operation or maintenance, please contact your Yamaha dealer for advice.

Q. Does the warranty cover incidental costs such as transportation due to a failure?
A. No. The warranty is limited to repair of the watercraft itself.

Q. May I perform any or all of the recommended maintenance shown in the Owner's/Operator's Manual instead of having the dealer do them?
A. Yes, if you are a qualified mechanic and follow the procedures specified in the Owner's/Operator's and Service Manual. We do recommend, however, that items requiring special or equipment be done by a Yamaha dealer.

Q. Will the warranty be voided if I do not operate or maintain my new watercraft exactly as specified in the Owner's/Operators Manual?
A. No. The warranty on a new watercraft cannot be "voided" or "cancelled." However, if a particular failure is caused by operation or maintenance other than as shown in the Owner's/Operator's Manual, that failure may not be covered under warranty.

Q. What responsibility does my dealer have under this warranty?
A. Each Yamaha dealer is expected to:
1. Completely set up each new watercraft before sale.
2. Explain the operation, maintenance, and warranty requirements to your satisfaction at the time of sale, and upon your request at any later date. In addition, each Yamaha dealer is held responsible for his setup, service and warranty repair work.

Q. Is the warranty transferrable to second owners?
A. Yes. The remainder of the existing warranty can be transferred upon request. The unit has to be inspected and re-registered by an authorized Yamaha dealer for the policy to remain effective.

CUSTOMER SERVICE

If your watercraft requires warranty service, you must take it to any authorized Yamaha dealer within the continental United States. Be sure to bring your warranty registration card or other valid proof of the original date of purchase. If a question or problem arises regarding warranty, first contact the owner of the dealership. Since all warranty matters are handled at the dealer level, this person is in the best position to help you. If you are still not satisfied and require additional assistance, please write:

YAMAHA MOTOR CORPORATION U.S.A.
CUSTOMER RELATIONS DEPARTMENT
P.O. Box 6555
Cypress, California 90630

CHANGE OF ADDRESS

The federal government requires each manufacturer to maintain a complete, up-to-date list of all first purchasers against the possibility of a safety-related defect and recall. This list is compiled from the purchase registrations sent to Yamaha Motor Corporation, U.S.A. by the selling dealer at the time of your purchase.

If you should move after you have purchased your new watercraft, please advise us of your new address by sending a postcard listing your Yamaha model name, engine number, dealer number (or dealer's name) as it is shown on your warranty card, your name and new mailing address.

Mail to:

YAMAHA MOTOR CORPORATION, U.S.A.
P.O. Box 6555
Cypress, California 90630
Attention: Warranty Department

This will ensure that Yamaha Motor Corporation, U.S.A. has an up-to-date registration record in accordance with federal law.
YAMAHA EXTENDED SERVICE (Y.E.S.)

Keep your Yamaha protected even after your warranty expires with genuine Yamaha Extended Service (Y.E.S.).

- Y.E.S. is designed and administered by Yamaha Motor Corporation to provide maximum owner satisfaction. You get uninterrupted factory-backed coverage for extra peace of mind.

- Y.E.S. is flexible. You choose the plan that is right for you: 12 months, 24 months, 36 months, or (on four-stroke models) 48 months beyond your warranty period.

- Y.E.S. is designed and administered by the same Yamaha people who handle your warranty—and it shows in the comprehensive coverage benefits. There are no mileage limitations. Coverage is not limited to “moving parts” or the “drive train” like many other plans. And Y.E.S. covers manufacturing defects just like the warranty. See the sample contract at your Yamaha dealer to see how comforting uninterrupted factory-backed protection can be.

- You do not have to pay anything for covered repairs. There is no deductible to pay, and repairs are not “pro-rated.” You do not have any “out-of-pocket” expenses for covered repairs.

- In addition, Travel and Recreation Interruption Protection (TRIP) is included at no extra cost. TRIP gives you up to $150 reimbursement per occurrence for any reasonable expenses you incur because your Yamaha needs covered service: replacement vehicle rental, emergency towing, phone calls, even food and lodging when you are away from home. This superb coverage goes into effect when you purchase Y.E.S., so it applies to any warranty repairs as well as covered repairs during your entire Y.E.S. plan period.

- Y.E.S. coverage is honored at any authorized Yamaha dealer nationwide.

- Y.E.S. coverage is transferable to a new owner if you sell or trade-in. That can make your Yamaha much more valuable!

This excellent Y.E.S. plan coverage is only available to Yamaha owners like you, and only while your Yamaha is still within the Yamaha Limited Warranty period. So visit your authorized Yamaha dealer to get all the facts. He can show you how easy it is to protect your investment with Yamaha Extended Service.

We urge you to act now. You will get the excellent benefits of TRIP coverage right away, and you will rest easy knowing you will have strong factory-backed protection even after your Yamaha Limited Warranty expires.

A special note:
If visiting your dealer is not convenient, contact Yamaha with your Primary ID number (your Owner’s Manual shows you where to find this number). We will be happy to help you get the Y.E.S. coverage you need.
