Step 3 > Choose a Configuration Method

The steps required to setup your system for using the Gigaset®depend on whether you use a PC or a Macintosh. Select the appropriate option for your system.

Option A > Configure the PC

To setup the Gigaset® device, you must first configure your PC to obtain an IP address from a DHCP server. Follow the procedure below.

1: Configuring Windows®

To configure your PC to obtain an IP address from a DHCP server, follow the procedure below:

1. Click Start > Control Panel.
2. Double-click the Network Connections icon.
3. Select your Network Card.
4. Click Properties.
5. Select Internet Protocol (TCP/IP).
6. Click Next.
7. Double-click the icon and skip to step 3.
8. Windows ME and XP users: If you have Universal Plug and Play (UPnP) enabled, your PC may detect the Gigaset device upon startup and provide a shortcut to the Gateway Setup Wizard.
9. When you have completed the Gateway Setup Wizard, you can connect to the Internet.

Step 2 > Configuring Internet Access

Here, use the procedure below to make sure your PC will be the Gigaset device (and not Dial up Networking) when connecting to the Internet.

1. Click Start > Control Panel.
2. Double-click the Internet Options icon.
3. Click the Connections tab.
4. Select the Built-in Ethernet from the drop-down menu.
5. Select Using DHCP Server from the Configure drop-down menu.
6. Click Apply Now and exit the System Preferences window.
7. Configure the Gateway using the procedures below.

Step 2 > Configuring Internet Access

Next, use the procedure below to make sure your PC will be the Gigaset device (and not Dial up Networking) when connecting to the Internet.

1. Click Start > Control Panel.
2. Double-click the Internet Options icon.
3. Click the Connections tab.
4. Select the Built-in Ethernet from the drop-down menu.
5. Select Using DHCP Server from the Configure drop-down menu.
6. Click Apply Now and exit the System Preferences window.
7. Configure the Gateway using the procedures below.

Step 4 > Configure the Gateway

If your PC has not been connected to a broadband modem or other network device, perform the PC configuration procedure below:

1. Start your Web Browser.
2. In the address bar, type http://gigaset, then press Enter. The Gateway Setup Wizard appears to guide you through the setup process.
3. When you have completed the Gateway Setup Wizard, you can connect to the Internet or configure additional options on the Gateway.

Congratulations! You have completed installing your Gigaset device.

Option B > Configure the Macintosh

To setup the Gigaset® device, you must first configure your computer to obtain an IP address from a DHCP server. Use the procedure below that corresponds to your system’s operating system.

Configuring OSX

1. Click Apple > Preferences.
2. Select the Network icon under the Internet & Network section.
3. Select Built-in Ethernet from the drop-down menu.
4. Select Using DHCP Server from the Configure drop-down menu.
5. Click Apply Now and exit the System Preferences window.
6. Configure the Gateway using the procedure Configuring the Gateway.

Configuring OS9

1. Click Apple > Control Panels > TCP/IP.
2. Select Ethernet from the Configure drop-down menu.
3. Select Using DHCP Server from the Configure drop-down menu.
4. Close the window and save the changes.
5. Configure the Gateway using the steps that follow.

Step 4 > Configure the Gateway

Windows ME and XP users: If you have Universal Plug and Play (UPnP) enabled, Windows may detect the Gigaset device upon startup and provide a shortcut to the device on the desktop. The icon will be labeled Residential Gateway. Double-click the icon and step to step 3.

If your PC has not been connected to a broadband modem or other network device, perform the PC configuration procedure below:

1. Start your Web Browser.
2. In the address bar, type http://gigaset, then press Enter. The Gateway Setup Wizard appears to guide you through the setup process.
3. When you have completed the Gateway Setup Wizard, you can connect to the Internet or configure additional options on the Gateway.

Congratulations! You have completed installing your Gigaset device.

Troubleshooting

LED Off Green Blinking Red/Green Red

Power off. Power is off. Power is on. Power not applied.

Ethernet

Power is off. Power is applied. Power not applied.

Built-in Ethernet is connected. Built-in Ethernet is not connected.

DSL line is trained and ready for traffic. DSL line is not trained.

User traffic is flowing in either direction. No traffic is flowing in either direction.

Activity

User traffic is flowing in either direction. No traffic is flowing in either direction.

USB

USB connected. USB user traffic is flowing in either direction. USB user traffic is not applied.
Before you begin...

Verify that the following items came with your DSL kit:

- Installation CD-ROM
- RJ-11 DSL cable
- RJ-45 Ethernet cable
- Power Supply
- Documentation
- Software Manual/USB
- Gigaset® Device
- Line filter(s)
- Wall-mount filter
- PCI Ethernet Adapter
- RJ-11 DSL cable (SE568 only)
- RJ-45 Ethernet cable
- Wall-mount filter

Step 1 > Install Line Filters

Devices such as fax machines, caller ID boxes, or phones that share the same phone line as your DSL account require a line filter. The line filter prevents noise from disrupting the DSL signal on the phone line. Filters can be in the form of a stand-alone line filter or a wall-mount filter.

1. Unplug the device’s cord from the phone jack.
2. Plug the filter into the phone jack.
3. Plug the phone cord (or other device cord) into the filter.

Step 2 > Choose an Installation Method

The Gigaset SE567 device can only be connected to an Ethernet port; the Gigaset SE568 can be connected to an Ethernet or a USB port. To connect using an Ethernet port, complete the steps in Option A. To connect to a USB port, complete the steps in Option B.

Option A > Ethernet Installation Method

If your computer does not have an Ethernet Adapter installed, install it now. Refer to your Ethernet Adapter manufacturer’s documentation for complete installation instructions.

Connect the Gigaset® Device

1. Connect the Ethernet cable (RJ-45) to the Ethernet port on the Gigaset device (yellow port).
2. Connect the other end to the Ethernet port on your computer.
3. Plug the DSL cable (RJ-11) into the DSL port on the Gigaset device (gray port).
4. Plug the other end of the DSL cable (RJ-11) into the phone jack.
5. Plug the power adapter into the power outlet and the Gigaset device (black port).
6. Ensure that the Gigaset device is powered on. The power switch is on the right side of the back panel.

Windows USB Driver Installation

Software Installation

If you are using the Gigaset device via the USB port, you must install USB drivers. Before installing the software make sure your PC is equipped with Windows® 98, Windows® 98 Second Edition (SE), Windows® 2000 Professional, Windows® Millennium Edition (ME), or Windows® XP. 32MB RAM; Pentium-compatible 166MHz or faster processor; 12MB available hard disk space.

1. Insert the Gigaset® Installation CD in to your CD-ROM drive to automatically complete the installation.
2. The software installation program does not start automatically, start it manually:
   1. Click Start > Run.
   2. Browse to setup.exe on the CD and double-click it to start the program.
3. Click Readme.txt. Follow the directions in Readme.txt to complete the software installation.

Macintosh USB Driver Installation

Software Installation

Before installing the software, make sure your computer is running OS 8.6 or above. This procedure will install your computer to complete the installation.

1. Insert the Gigaset® Installation CD into your CD-ROM drive.
2. Open the Gigaset folder from the desktop.
3. Click Readme.txt. Follow the directions in Readme.txt to complete the software installation.
4. After the USB driver is installed, continue with the PC Configuration procedures described on the next page.
