DESKTOP AS A SERVICE

The industry’s only virtualization platform for delivering Windows desktops and applications as a cloud service

Transforming the Desktop Market

Bring Your Own Device (BYOD), combined with mobility and rising use of tablets, are driving organizations to reevaluate their desktop strategies. The industry is abuzz with talk about transforming from desktop-centric to application-centric models. With Xtium’s desktop as a service (DaaS) platform, end-user computing is now easy, flexible and affordable. Get the corporate workspace you want—including the desktops and applications—wherever you want them, delivered as a cloud service.

Desktop as a Service Platform

Xtium’s DaaS platform, powered by Desktone, enables a risk-free evolution of the next-generation workspace. It provides a complete virtual workspace from the cloud, delivering Windows desktops and applications as an easily managed, unified cloud service. With our DaaS platform, businesses can rapidly provision desktops and applications to users on any device, anywhere.

Desktops are transformed from the capital expense outlay inherent in enterprise onsite VDI and physical PC refreshes, into a predictable, easy-to-budget operating expense item. The DaaS platform provides you with an integrated virtual desktop and application environment at an extremely affordable price, and standard packaging sizes that you can configure to meet end-users’ performance requirements.

Benefits of DaaS

Unified Desktop and Application Delivery.
Deploy Windows desktops and applications from the cloud to any end-user device, including tablets, smartphones, laptops, PCs and thin clients. Your IT staff can easily manage applications and multiple desktop models.

Turnkey Desktop Provisioning.
Create and manage pools of virtual desktops and applications in just minutes with a few simple clicks. IT administrators can define pools, create custom policies for usage and allocate pools to user groups.

HOW IT WORKS

1. Choose your desktop.
   Select from standard image, standard with MS Office, standard with MS Office Pro

2. Promote to users.
   Create user groups and permission settings

3. Get online instantly.
   Use the online portal to make changes easily and rapidly
Uncompromising Service.
Forget waiting for faulty hardware shipments or coordinating vendor service visits to troubleshoot and repair desktops. We maintain best-in-class Service Level Agreement (SLA).

Ease of Accessibility.
To minimize the cost and labor associated with virtual desktop infrastructures, the DaaS platform includes a self-service, policy-based portal that users can access from any browser. This lets users create, activate and manage their virtual desktops and applications without relying on a system or desktop administrator. Alternatively, we can handle this for you.

Device Independence.
Users can leverage nearly any device to access their virtual desktops and applications.

Secure, Scale, Store.
The DaaS platform is secured and trusted in our top-tier data centers with first-class monitoring, highly secure facilities and a support team of certified experts. By leveraging Xtium’s DaaS platform to deliver desktops and applications as a cloud hosted service, you can be assured that user data that is used by applications on your desktops is always secure.
