Advanced fingerprint capture & enhancement

DCS® 5
UV|VIS|IR
DCS 5 is a comprehensive imaging system for the detection, capture and enhancement of almost any type of fingerprint on any surface or background to ensure that maximum detail is revealed.

Not only does the DCS 5 high resolution, 36.3MP camera fitted with application specific macro lenses produce images of exceptional quality, advanced digital enhancement, applied simply, maximises print detail to improve the value of evidence.

Precise wavebands of illumination from UV through the visible to IR are provided to improve the visualisation of every type of fingerprint whether it be latent, contaminated or chemically treated.
DCS 5 reveals fingerprints on a densely patterned banknote dusted with fpNATURAL 1, Foster + Freeman’s new IR fluorescent powder.
Fluorescence Imaging
Many latent fingerprint treatments such as Ardrox, DFO, BY40 and fluorescent powders fluoresce under specific wavelengths of light.

Using the DCS 5 multi-wavelength ring light an operator is able to select the optimum wavelength to generate the maximum intensity of fluorescence for each type of treatment.

Infrared Imaging
Interfering backgrounds may be suppressed appearing white as they reflect IR whereas some chemical treatments such as Physical Developer and certain powders absorb IR and appear black.

Foster + Freeman’s new fingerprint dusting powder ‘fpNatural 1’ fluoresces brightly in the infrared when illuminated with red light. Its application has the advantage of eliminating interference from most backgrounds which rarely fluoresce at this wavelength.

Reflected longwave UV Imaging
Many surfaces such as glass and plastics absorb UV and appear black, which improves the visibility of both treated and untreated latent prints which often reflect UV. Images can then be significantly enhanced using the DCS5 software.

Flexible directional lighting
A high intensity halogen or interference light source fitted with a range of fibre optic light guides provide backlight, coaxial and oblique lighting for the examination of fingerprints on difficult surfaces such as reflective, curved or dusty surfaces or as 3-D impressions in soft materials.

Using a dark field ring light to illuminate a 3-D fingerprint in soft putty.
An integral part of DCS 5 is the easy-to-use software that provides sophisticated image processing and enhancement tools to uncover hidden detail within images.

Operated via simple drop down menus, DCS 5 enhancement software enables the operator to remove textured or ‘difficult’ backgrounds as well as enhance prints developed using a variety of chemical treatments, dyes, stains and dusting powders including the new IR powder. Each toolbox offers the operator ‘tried & trusted’ enhancement programmes that enable complex processing routines to be performed with a single button press.

Ninhydrin developed fingerprint on a multicoloured patterned background. DCS 5 enhancement software can improve the clarity of fingerprints by removing or reducing backgrounds.

Fingerprint illuminated with the dark field ring light and enhanced using the dedicated 3-D enhancement software.

Encryption software protects all original fingerprints captured by the system. Images that are enhanced or processed in any way automatically lose their status of authenticity with full details of each process being recorded in a detailed Audit Trail.

Essential when presenting courtroom evidence, audit trails detail every step taken during the capture and enhancement process together with information about the operator, computer and software used to perform enhancements. Audit Trail descriptions are in simple to follow language to aid presentation.

Interactive Guidance
DCS Wizard provides an interactive step-by-step guide to achieving consistently high quality images of fingerprints.

By following intuitive steps to select the exhibit type, surface type, chemical processes, and background data the user will be presented with suggestions on the lighting, filters, excitation wavelengths and camera settings required to achieve the optimum print definition and contrast every time.

Comparison & AFIS Search
An optional software module enables the user to display two fingerprint images, side-by-side, for comparison and enhancement.

Providing intuitive control of image zoom, orientation and visual enhancements, the module provides a practical digital alternative to the traditional manual method of fingerprint comparison.

In addition, the module provides an affordable AFIS capability allowing users to create and manage databases of up to 5,000 records.

1:n and 1:1 fingerprint searches are fast and effective, saving days of manual search time.
1 Camera
custom-modified digital SLR camera
In order to achieve excellent image quality, the DCS 5 has been built around a pro-grade DSLR camera customised by Foster+Freeman for UV-Vis-IR imaging applications.

Setting new standards for image quality, the Nikon D810 includes a new large format image sensor and a powerful image processing engine that work together to produce images of exceptional clarity.

Lenses
A choice of specialist lens provides greater control of the image captured by the camera.

2 105mm Vis-IR Macro Lens
for general imaging
Focusing up to 1:1 life size in auto or manual focus modes images remain sharp at every distance.

3 60mm UV Transmitting Lens
for reflected UV imaging
This quartz/fluorite lens, is essential for Reflected UV Imaging but also provides excellent results in the visible and IR.

4 85mm Vis-IR Tilt/Shift Lens
for depth of field control
With a revolving capability of + or - 90 degrees this high performance lens enables selective focusing of images across different focal planes in the visible and IR wavelengths.

5 Copy Stand & Accessories
for accurate, repeatable image alignment
Professional photographic copy stand includes a 1.2m column and transmitted light base. Accessories include camera lens bellows and variable friction light source mounts.
1 Multi-wavelength Ring Light
The Crime-lite 8x4Mk2 provides intense white, UV, violet, blue, blue/green, green, orange and red narrow waveband light for visible and fluorescent image examinations.

2 Halogen Light Source Package
Intense 150W light source with 5 coloured filters for general contrast imaging. To be used in conjunction with the fibre optic light guides for directional lighting on any surface type.

3 Forensic Light Source (FLS)
A continuous 400-1000nm narrowband light source used in conjunction with the fibre optic light guides provides specific wavelengths of light for improved contrast imaging and removal of interfering backgrounds.

4 IR Imaging Crime-lite 8x4Mk3
A specialized LED ring light providing intense blue and red light for generating infrared fluorescence from specialist dusting powders such as fpNatural 1. Also includes infrared light for examining reflected infrared images for fingerprints in blood or treated with Physical developer or Powders.

5 UV Light Source
The Crime-lite 82S fitted with 16 UV LEDs. Provides more intense UV at 365nm for generating fluorescence from treated fingerprint images and reflected UV images.

6 Fibre Optic Light Guides
Flexible directional light guides to illuminate any evidence type:

- **Ring Light**: Diffuse, uniform illumination for flat items such as paper, banknotes or coloured plastic.
- **Backlight/Paddle Light**: For transmitted illumination for lifts, clear plastic, cellophane or for specular illumination for prints on reflective surfaces.
- **Darkfield Ring Light**: 360° oblique illumination for 3D impressions in soft materials.
- **Twin arm Goosenecks**: Duel directional illumination for curved or reflective surfaces.
- **Coaxial Light**: For reflective surfaces including mirrors & CD’s.
In order to accommodate the differing requirements of fingerprint laboratories worldwide, **DCS 5** is a modular system that can be expanded through the addition of application specific modules.

The **DCS 5 core** provides a complete solution to the capture and enhancement of fingerprints within the visible spectrum and includes a Windows PC running the DCS 5 Software, a pro-grade photographic copy stand and a selection of light guide clamps and mounts.

Additional modules can be selected to provide IR, Reflected UV and Shift/Tilt Imaging capabilities.

### DCS 5 core

#### Image Capture

- **Nikon D810**
  - Custom-modified camera
  - 36.3 million effective pixels
  - 35.9 x 24mm CMOS sensor
- **105mm Macro Lens**
  - for visible imaging
  - Anti-reflection lens coating

#### Illumination

- **Halogen Light Source**
  - 150W halogen lamp
  - Variable dimmer control
  - Supplied with light guide
  + Darkfield Light Box
  + A4 Line Light
- **Multi-waveband Ring Light**
  - 32x high intensity LEDs
  - White, UV, Violet, Blue, Blue/Green, Orange and Red illumination
  - Includes power adaptor
  + Imaging Filters

### Application specific modules

#### Infrared Imaging

- **IR Imaging Ring Light**
  - DC55/SYS/B4MK3
  - Blue, Red and IR LED illumination
  - 715, 780, 850, 1000nm Viewin Filters
  - Includes power adaptor
  - Sample of fpNatural1 IR fingerprint powder

#### Reflected UV Imaging

- **60mm UV Transmitting Lens**
  - DC55/LENS/UVR
  - Macro lens with 310-1100nm transmission
  - Manual focusing
  + 330-385nm bandpass filter
  + Circular Polarizing Filter
  + Visible Pass Filter
  + Optional IR Filter Step-ring
- **UV Light Source**
  - 16x 365nm LED illumination
  - Power adaptor
  - UV light source clamp

#### Shift/Tilt Imaging

- **85mm Shift/Tilt Lens**
  - DC54/LENS/PCBE85
  - Maximum shift: ±12.4 mm
  - Maximum tilt: ±8.3 mm
  - Supplied with macro extension tubes
  + Circular Polarizing Filter
  + Visible Pass Filter
  + Optional IR Filter Step-ring

#### Comparison & Search

- **FCS Software Module**
  - DC55/FCS
  - Side-by-side analysis tool
  - Create and search against databases

---

To request a formal DCS 5 sales quotation, please contact your local Foster + Freeman sales representative providing details of the modules you would like to add to your system.
