This manual contains important information on the safe use and operation of this machine. Failure to read this manual before operating, adjusting or servicing this machine could cause injury or damage to persons or objects. Anybody operating the machine should understand how to use and operate it before starting it up. Keep this manual for future reference. This manual is an **ENGLISH** translation of the original version in Italian.

For a new manual contact:

Key for machine symbols

- **HAZARD**: Failure to read the Taurus machine manual before operating, adjusting or performing maintenance operations on the machine could cause injury or damage to persons or objects. Anyone operating the machine should understand how to use and operate it before starting it up.

- **HAZARD** means Failure to comply with HAZARD notices on the machine or in this manual may result in death or serious injury to the operator or other people. Read and comply with all HAZARD notices on the machine or in this manual.

- **WARNING** means Failure to comply with WARNING notices on the machine or in this manual may result in injury to the operator or other people. Read and comply with all WARNING notices on the machine or in this manual.

- **CAUTION** means Failure to comply with CAUTION notices on the machine or in this manual may result in injury to the operator or other people. Read and comply with all CAUTION notices on the machine or in this manual.

**READ THE INSTRUCTIONS CONTAINED IN THIS USER AND MAINTENANCE MANUAL BEFORE USING THE MACHINE**

**HEARING PROTECTION DURING USE IS RECOMMENDED**

**PROTECTION OF THE AIRWAYS DURING USE IS RECOMMENDED**

**HAZARD DUE TO ELECTRICITY**

**HAZARD DUE TO MOVING PARTS**
Storage

It is advisable to store the machine in its original packaging. Doing so makes it possible to form a column of two packages maximum, with one on top of the other.
If the machine is removed from the original packaging and is not used for some time ensure the wheels and drum are not in contact with the ground. In this case use two supports at least 50mm in height to rest the machine on, ensuring contact is with the base frame.

WARNING

This equipment is for dry use only and must not be used or kept outside in wet conditions. Store the machine in a dry building, otherwise the machine could be damaged.
Storage temperature from -20°C to 50°C.

Transporting and handling the machine

WARNING

The machine is heavy therefore remove the motor and handle unit before it is transported. Ask for assistance to transport the three parts.

The machine can be dismantled into three parts to facilitate transportation:

Motor
Suction tube and handle unit
Base frame with drum

Proceed as follows:

1. Ensure the power supply cable is disconnected from the mains and the machine.
2. Open the belt guard after unscrewing the screws with the tool provided.
Transporting and handling the machine

Transport with one person

3. Loosen the belt tightener using the lever (pos. 2 fig. A) and remove the belts.

4. Loosen the knob (pos. 3 fig. A) until the hollow washers positioned on the motor support shaft slip out from their support housing.

5. Remove the motor and take it to the work area.

6. After lowering the lever (pos. 4 fig. A) lift the tube (pos. 5) and release the bar (pos. 6) from the cylinder (pos. 8).
7. Loosen the handle (pos. 9 fig. A) and remove the tube from its housing and bring it to the place of work.

8. Lift the base frame by clasping the front and back. Bring the belt guard to the edge and take it to the work area.

**Transporting and handling the machine**

**Transport with two people**

When transporting the machine with two people proceed as follows:

1. One operator should clasp the handle grip and
2. the second, holding the hub of the belt guide (pos. 1 fig. A), should lift the machine

**WARNING**

This equipment is not to be used by anyone (children included) with physical or mental disabilities, or anyone without the relevant experience and knowledge, unless they have received instructions on using the equipment and are supervised by a responsible person to ensure their safety.

Children must be supervised to ensure that they do not play with the machine.
Introduction

Information on safe use

This instruction manual should be read carefully before using the TAURUS wood flooring sander for the first time. The instruction manual contains important information on safety and preventing improper use of the machine and will resolve any doubts or questions, making it possible to operate the machine safely and with ease. Removing safety features could cause death or physical injury. Familiarise yourself with the machine before using it for the first time. If a situation arises which has not been described in this manual contact your retailer or Kunzle & Tasin s.r.l.

Correct use

The TAURUS wood flooring sander is suitable for the dry sanding of wood floors. Any other use without the consent of the manufacturer is prohibited. Do not use on wet floors. See also Prohibited Use on page 13. Keep hands and clothing away from moving mechanical parts. The work area is protected via the base frame and the mobile cover on the abrasive drum.

Machine data plate

The following information can be found on the machine data plate:

1. Machine model
2. Safety symbols
3. Motor power
4. Frequency
5. Supply voltage
6. Name of manufacturer
7. Country of manufacture
8. Year of manufacture or see serial number

9. Serial number:
The serial number is formed as follows:
- the first two numbers refer to the year of manufacture (13 = 2013)
- the second group of three numbers indicates the date the machine was manufactured (029 = 29th January)
- the last two numbers indicate the progressive number of machines produced on that day of manufacture (16 = sixteenth machine)
Instructions for assembly following transportation

To re-assemble the machine following transportation proceed as follows:

1. Open the belt guard.
2. Position the motor in its housing.
3. Secure the motor by tightening the knob (pos. 3 Fig A)
4. Fit and stretch the belts.
5. Close the belt guard by tightening the screws.

**CAUTION**
Excessive belt tension may cause the premature failure of the ball bearings. The drum belt must have a 10.5 mm stretch with a centre load of 30±3N. Belt tension can be adjusted using the screw (pos. 1 fig. A)
The vacuum cleaner belt must have a 8 mm stretch with a centre load of 18±2N. The belt tension can be adjusted using the belt tightener.

**HAZARD**
Using the machine when not fully assembled may cause injury or damage to people or objects. Do not use the machine when it is not fully assembled. Keep all fittings tightly closed. Maintain machine settings in accordance with the specifications.
Commencing operation

Instructions for assembly following transportation

6. Pull the belt tightener as shown:

7. Fit the suction pipe and roller control rod.

8. Lift the drum with the lever (pos. 4 fig. A).

9. Connect the power supply cable to the machine and power supply.

Instructions for electrical connection

CAUTION
This machine only operates with the voltage and frequency shown on the machine data plate. Before connecting the cable to the power supply ensure the correct voltage and frequency are available.

WARNING
Do not expose the machine to rain. This machine is intended for dry use only. Keep the machine in a dry building and do not use it in damp or wet places.

WARNING
If the machine is not connected correctly to the electricity network death due to electrocution may occur. To prevent electric shocks always use a three wire electrical system connected to earth. For maximum protection against electric shocks use a circuit protected with a differential cut-out switch.

WARNING
Tampering with the earthing plug in any way may result in death from electrocution. Do not cut, remove or break the earthing plug. If the socket does not match the plug consult a qualified electrician.

HAZARD
If the machine is used with a damaged plug or power supply cable death may occur from electrocution. If cables or plugs are worn or damaged in any way, have them replaced by the manufacturer or the K&T technical support service or similarly qualified person, in order to prevent risks to safety.
Commencing operation

Cables, extensions and plugs

Only use approved cables. The maximum recommended cable length is 7m; for greater lengths use cables with a larger cross-section.

**CAUTION**
Using the machine with unsuitable cable cross-sections and/or excessively long cables may cause injury or damage to people or objects.

**WARNING**
The machine must never be moved using its cable and the cable must never be pulled when disconnecting from the socket.

**WARNING**
Keep the cable away from sources of heat, oil and sharp edges.

**WARNING**

**MACHINE WITH 230V~ 50Hz SINGLE PHASE MOTOR**
For machines with a 230V~50Hz single phase motor (Europe), a HO5VV-3x2,.5 mm2 HAR-approved power supply cable must be used along with an approved SHUKO 2P+T 32A 200÷-250V plug.

**MACHINE WITH 380V~ 50Hz TRIPLE PHASE MOTOR**
For machines with a 380V~50Hz triple phase motor (Europe) only use approved four wire cables with three main wires and one earth.

**MACHINE WITH 220V~ 60Hz SINGLE PHASE MOTOR**
For machines with a 220V supply cable and TWIST LOCK 30A 250V plug.

---

Commencing operation

Instructions on removing sawdust generated during use

**HAZARD**
Sawdust can ignite spontaneously and cause injury or damage. Empty the contents of the dust bag when it is 1/3 full. Empty the dust bag at the end of each machine use. Never leave the dust bag unattended when it contains sawdust. Do not empty the contents of the dust bag above a fire.
### Recommendations on prevention measures for users

#### Personal safety measures

| **WARNING** | Sawdust can spread through the air and be inhaled when using the sander. Always wear a dust mask when using the sanding equipment. |
| **WARNING** | The eyes and/or body may suffer injury if personal safety clothing is not used. Always wear safety goggles, protective clothing and a dust mask during sanding operations. |
| **WARNING** | Lengthy exposure to noise levels during sanding operations may damage the hearing. Always use ear protectors during sanding operations. |
| **CAUTION** | Never become distracted during sanding operations, check what is happening continually. Use common sense. Do not use the machine when tired. |

#### Compliance with safety measures and warnings

| **HAZARD** | Using the machine when not fully assembled may cause injury or damage to people or objects. Do not use the machine when it is not fully assembled. Keep all fittings tightly closed. Maintain machine settings in accordance with the specifications. |
| **HAZARD** | Using the sander without the safety guards and covers in position may cause injury or damage. Always ensure that all safety guards and covers are in position and secured well. |
| **HAZARD** | The wood flooring sander may create an explosive environment. Cigarettes, cigars, pipes, lighters, pilot flames, or any other source of fire may create an explosion if lit during sanding operations. No sources of fire must be kept near the work area. |
| **HAZARD** | Poorly ventilated work areas may create an explosive environment when some combustible materials are present in the atmosphere, such as solvents, thinners, alcohol, fuel, some paints, wood dust or other combustible materials. Floor sanding machines may cause various materials and fumes to ignite. Read the manufacturer's instructions for each chemical product used and establish its combustibility. Always keep the work area well-ventilated. |
| **HAZARD** | Striking nails when sanding may generate an explosion or fire. Always ensure all nails are sunk before sanding surfaces. |
| **HAZARD** | Serious damage may occur if the power supply circuit trips repeatedly or is undersized. Have the fuses, safety circuit and power supply line checked by an authorised electrician. |
| **HAZARD** | Performing maintenance and/or repairing the machine when it is not fully disconnected from the power supply may cause death due to electrocution. Disconnect the power supply before carrying out any maintenance and/or repair work. |
| **HAZARD** | The use of this machine on a circuit which is not earthed may cause death due to electrocution. Never disconnect or disable the earthing conductor. Consult an electrician if the earth conductor is missing or it is suspected that the circuit is not suitably earthed. |
HAZARD  The use of this machine with a damaged power supply cable may cause electric shock. Check the power supply cable regularly for damage such as splitting or wear and tear. Do not use the machine if the power supply cable is damaged. Do not use the electric cable to move the machine.

HAZARD  Injury or damage may occur if the sander runs over the power supply cable and it becomes damaged. Keep the cable away from the lower part of the machine to avoid contact with the abrasive. Always keep the power supply cable raised above the machine.

HAZARD  The moving parts on this machine may cause serious injury and or damage. Keep hands, feet and loose clothing away from all moving parts of the sander.

HAZARD  Performing maintenance or replacing the dust bag may cause injury to the operator or people nearby if the machine is connected to the power supply.

WARNING  Failure to comply with instructions on this machine and in this manual may cause serious injury and/or damage. Read and comply with all safety instructions. Ensure that all plates, labels, warnings and instructions are secured to the machine. New plates can be obtained from an authorised K&T dealer.

CAUTION  Injury or damage may occur if maintenance operations or repairs are carried out by unauthorised personnel.

CAUTION  The machine may become damaged if it is not kept in a dry building. Keep the machine in a dry building.

Instructions on correct machine use

Read this manual carefully and become familiar with the machine. The equipment is suitable for industrial use e.g. in hotels, schools, hospitals, offices, factories and shops. The following information highlights particularly hazardous situations for the operator and/or machine. Understand when these conditions may be present. Removing safety features could cause death or physical injury. Take all steps necessary to instruct personnel who may use the machine. Report any damage on the machine or incorrect operation immediately.

1. Keep hands and clothes away from rotating parts.
2. Keep hands on the handle when the motor is operating.
3. Do not leave the machine unattended when the motor is operating.
4. Always use the machine with the dust bag in the correct position.
5. Do not detach the dust bag with the motor operating.
6. Always disconnect the power supply cable from the machine before performing maintenance.
7. Transport the machine with care due to the heavy weight of the individual parts making up the machine.
8. Always use the machine in well-ventilated areas.
9. Always dispose of the sawdust appropriately.
10. Use the type and amount of abrasive specified in the instruction manual.
11. Always keep the work area well-lit.
12. The use of accessories other than those recommended in this manual may cause injury.
13. The sander is for indoor use only.

WARNING

This equipment is not to be used by anyone (children included) with physical or mental disabilities, or anyone without the relevant experience and knowledge, unless they have received instructions on using the equipment and are supervised by a responsible person to ensure their safety.

WARNING

This equipment is not suitable for collecting hazardous dust.

CAUTION

Using the machine to move objects or moving on an incline may cause injury or damage. The machine must only be used to sand dry wooden floors which are level or have a maximum incline of 2%. Do not use the machine to sand furniture. Do not sit astride the machine when it is operating.

CAUTION

Work surfaces may be seriously damaged if the machine is left turning on one point while the tool is in contact with the surface. To avoid damaging the surface approach the cutting line carefully. Do not stop when lowering and raising the equipment, keep moving at constant speed.

Starting the machine

To start the machine proceed as follows:

1. Become familiar with the machine and read all instructions and safety notices. Ensure that all operators have read this manual.

2. Arrange the dust bag as indicated by the yellow arrow and secure it with the cord.

3. Locate the power supply. The socket must be compatible with the plug. To avoid electrical hazards the socket must be earth protected with a 20 A fuse.

4. Wind the cable round the cable safety arm (as shown in the photo at the side) to keep it away from the path of the machine.
Starting the machine

5. Open the side guard (fig. C).

6. Lower the tensioning roller using the roller tensioning lever.

7. Insert the abrasive belt letting it protrude by approximately 2 mm.

**WARNING**

Only use 750x203 mm abrasive belts.

8. Tension the roller using the roller tensioning lever.
9. Connect the plug to the socket.

10. Ensure the lever is lowered (pos. 1 fig. A) and the drum is raised off the floor.

11. Starting up:

   a) SINGLE PHASE MOTOR

       1- Turn the lever on the switch (pos. 10 fig. B) from 0 to the START position.
       2- Keep it in this position until the motor has reached a sufficient rotation speed.
       3- Release the lever on the switch which will automatically return to work position 1.

   b) THREE PHASE MOTOR:

       1- Turn the reversing switch to position 1
       2- Press the START button.
WARNING
Check carefully that the roller rotation direction is the same as indicated on the belt cover. If not switch off the machine (STOP button) and turn the reversing switch lever from position 1 to position 2. Press the START button.

HAZARD
Using the machine with the wrong roller rotation direction can cause injury/damage to people/objects.

12. Observe the operation of the abrasive belt. Follow the Procedures for Centring the Abrasive Belt. The belt must run inside the tensioning roller (A) and protrude by approximately 2 mm from the rubber roller (B).

13. Close the side guard (fig. C).

14. After lowering the lever (pos. 4 fig. A) commence sanding.
Starting the machine

15. To stop the machine:

a) SINGLE PHASE MOTOR

Turn the lever of the switch from position 1 to position 0.

b) THREE PHASE MOTOR

Press the STOP button.

IMPORTANT

If starting the machine is difficult in winter when temperatures are very low remove the abrasive belt and start the motor, letting it idle for several minutes. Replace the belt and repeat the start up operations described above.

WARNING

A safety contactor is fitted to the machine. If the power fails when sanding the contactor is activated automatically, stopping the machine from accidentally starting up when the power is restored. To recommence sanding repeat the start-up operations described above.

Machine adjustment procedures

Procedures for centring the abrasive belt

The belt centres automatically on starting the motor.

WARNING

The belt is in the correct position when it protrudes approximately 2 mm from the sanding roller. The belt must run within the tensioning roller (A) and protrude approximately 2 mm from the rubber roller (B).
Machine adjustment procedures

Procedures for centring the abrasive belt

When first fitted the belt may be in the wrong position. In this case use the spanner as shown (pos. 13 fig. D) and proceed as follows:

1. Turning the screws clockwise moves the belt towards the outside.
2. Turning the screws anti-clockwise moves the belt towards the inside.

Adjusting sanding pressure

To vary drum pressure on the floor, use the adjustment knob (pos. 14 fig. E) and proceed as follows:

1. Turn the adjustment knob clockwise to decrease drum pressure on the floor.
2. Turn the adjustment knob anti-clockwise to increase drum pressure on the floor.
Machine adjustment procedures

Wall edge castor

A support with a free castor has been fitted to avoid damage to the skirting board or wall when sanding along the wall.

**WARNING**

The wall edge castor is correctly positioned when the machine is approximately 8 mm away from the wall with the castor up against it.

Before starting work position the castor correctly by unscrewing the screw (pos. 12 fig. C), moving the support to the required position and tightening the screws.

Wheel adjustment (on a surface parallel to the axis of the drum)

Before sanding check roller operation on the work surface.

The diagram shows the two possible cases:

- **OK** = roller and wheels are parallel to the surface to be sanded and the mark left by the roller is the total roller length (approx. 200mm).

- **NO** = the roller does not rest fully on the surface and only sands at one part, emphasising marking on the floor.

In this case the roller and wheels must be positioned parallel to the surface to be sanded by varying the height of the cam wheel.
To adjust proceed as follows:

1. Turn the machine over.
2. With the tool provided with the machine check how much the fixed wheel protrudes.
3. Loosen the nut (pos. 16 fig. F).
4. Turn the cam pin (fig. F) and raise/lower the cam wheel until the wheel protrudes such that the roller operates in parallel to the surface to be sanded.
5. Lock the nut (pos. 16 fig. F).

Routine maintenance to be performed

To keep the machine in good working condition the following items must be checked and serviced regularly:

Sawdust chamber (for the user)

Hoover the sawdust chamber regularly.
Routine maintenance to be performed

Drums (for the user)

Check the outer surface of the drum regularly.
Remove any dirt.

Wheels (for the user)

Remove dirt from the machine unit and wheels regularly.
Dirt may cause uneven sanding.

Dust bag (for the user)

Remove the bag and shake it well to remove sawdust. Turn the bag inside out and wash it in the machine in cold water to prevent blockage of the pores and a decrease in dust collection ability.
Routine maintenance to be performed

Dust bag (for the user)

As an alternative to the fabric bag the following may be used:

a) Disposable paper bags, available in packs of 3 (P/N 6300030142).
   The limit for use is 1/3 of the total capacity.

b) Remote control industrial vacuum cleaner with tube with maximum length of 10 metres.

Belt tension (for the user)

Check belt tension regularly. For adjustment procedures see page 6 of this manual.
If the belt is excessively worn it must be replaced.

CAUTION

Excessive belt tension may cause the premature failure of the ball bearings.
The belt must have a 10.5 mm stretch with a centre load of 30 ±3 N.

Bearings (only for Technical Support Service)

Check bearings regularly for wear or damage according to the following timescales:

<table>
<thead>
<tr>
<th>Component</th>
<th>Time Frame</th>
</tr>
</thead>
<tbody>
<tr>
<td>WHEELS</td>
<td>after the 2500th hour</td>
</tr>
<tr>
<td>FAN SHAFT</td>
<td>after the 2500th hour</td>
</tr>
<tr>
<td>SANDING DRUM</td>
<td>after the 5000th hour</td>
</tr>
<tr>
<td>MOTOR SHAFT</td>
<td>after the 5000th hour</td>
</tr>
</tbody>
</table>
Routine maintenance to be performed

Roller pulleys and motor pulleys (for the user)

Regularly check that the groove (2) of the pulley has not sunk otherwise the belt (1) will operate on the bottom (3) of the pulley itself.

**WARNING**

Pulleys with sunken grooves cause the belts to slip and the correct power will not be transferred to the roller/suction pipe.
For example, this situation can easily occur if the machine loses power during operation.
They should therefore be replaced.

Spare parts

**Always use K&T spare parts.**
Failure to use K&T spare parts, or repairs/adjustments carried out by unauthorised personnel, will invalidate the guarantee and any resulting liability.
**The machine must only be repaired by qualified personnel.** This electric equipment is compliant with the relevant safety legislation.
Repairs must be carried out by qualified personnel using K&T spare parts, otherwise the user may suffer serious injury.

Disposal

Disposal of Waste Equipment by Users in Private Households in the European Union. This symbol on the product or packaging indicates that it must not be disposed of with other household waste. It is your responsibility to dispose of your waste by bringing it to a designated collection point that recycles electrical and electronic waste equipment. The separate collection and recycling of waste at the time of disposal helps to conserve natural resources and ensures it is recycled in a manner that safeguards health and the environment. For more information about where to take waste equipment for recycling, please contact your local council office, household waste disposal service or retailer where you purchased the product. To indicate that this product has special disposal requirements a label is attached to the back of the handle unit. If an external power supply is included, attach the small label to the back of the power supply.

Élimination des équipements usagés par les utilisateurs dans les foyers privés au sein de l’Union européenne. La présence de ce symbole sur le produit ou sur son emballage indique que vous ne pouvez pas vous débarrasser de ce produit de la même façon que vos déchets courants. Au contraire, vous êtes responsable de l’évacuation de vos équipements usagés et, à cet effet, vous êtes tenu de les remettre dans un point de collecte agréé pour le recyclage des équipements électriques et électroniques usagés. Le tri, l’évacuation et le recyclage séparés de vos équipements usagés permettent de préserver les ressources naturelles et de s’assurer que ces équipements sont recyclés dans le respect de la santé humaine et de l’environnement. Pour plus d’informations sur les lieux de collecte des équipements usagés, veuillez contacter votre mairie, votre service de traitement des déchets ménagers ou le magasin où vous avez acheté le produit. Fixez la grande étiquette à l’arrière du produit pour signaler qu’il doit être évacué selon une procédure particulière. Lorsqu’une alimentation externe est fournie, fixez la petite étiquette à l’arrière de celle-ci.
