
This standard is for organizations working within the oil and gas industry. Certification to ISO/TS 29001:2010 improves your organization’s processes and quality practices.

This course is intended to provide an overview of the ISO 9001:2008 standard to the ISO/TS 29001:2010 standard.

Who should attend? Personnel working in or with the petroleum, petrochemical & natural gas industries. Also, industry suppliers

Attendees will learn:
- The basic requirements of a quality system that complies with the ISO/TS 29001:2010 standard
- Industry examples of how to comply with each element of the standard
- TQS’s phased approach to implementation including gap analysis, procedure development, employee training, internal audits, management reviews, processing corrective actions and the selection of a registrar

What is ISO/TS 29001:2010?
ISO/TS 29001 provides additional requirements to the ISO 9001 standard for the petroleum, petrochemical & natural gas industries. This standard is the basis for the industry’s quality management system requirements worldwide.

What are the Benefits?
The ISO/TS 29001 technical specification is for the development of a quality management systems that provides for continuous improvement. This standard emphasizes defect prevention and reduction of variation and waste within the supply chain and service providers.

- Recognized as the best quality practices within the petroleum, petrochemical and natural gas industries organization.
- Helps your organization meet contractual obligations and expectations, and improves your market position against competitors.
- Provides quality key performance indicators in key areas including: waste, cost of quality, supplier performance and customer satisfaction.
- Provides you with a sound structure for internal development and continuous improvement.
