SCOPE

The *Journal of the American Academy of Child and Adolescent Psychiatry (JAACAP)*’s goal is to advance the science and practice of child and adolescent psychiatry by publishing original research and papers of theoretical, scientific, and clinical relevance to the field. *JAACAP* welcomes unpublished manuscripts whose primary focus is on the mental health of children, adolescents, and families. Submissions may come from diverse viewpoints including but not limited to: genetic, epidemiological, neurobiological, and psychopathological research; cognitive, behavioral, psychodynamic, and other psychotherapeutic investigations; parent–child, interpersonal, and family research; and clinical and empirical research in inpatient, outpatient, consultation–liaison, and school-based settings. *JAACAP* also seeks to promote the well-being of children and families by publishing scholarly papers on such subjects as health policy, legislation, advocacy, culture and society, and service provision as they pertain to the mental health of children and families.

All new manuscripts must be submitted online at: http://jaacap.edmgr.com. Please direct questions to the Editorial Office at support@jaacap.org.

We wish to receive only papers in which the participants are 18 years of age or younger unless the participants are parents or have been followed since childhood. Papers that clearly do not fit our format, mission, or publication priorities will be returned without review. Articles considered for publication will undergo peer review.

New *Research articles* are reports of original work that contribute, analyze, and/or explain new evidence and data from a sizeable group of patients. They must be no longer than 6,000 words (all word counts include the title page, abstract, text, references, tables, figures, and figure legends).

*Review articles* (theoretical or critical analyses of the literature) must be invited by the editors. Inquiries about potential topics are welcome. Authors can propose topics for Review articles by submitting their proposal to support@jaacap.org. Including an abstract or brief summary of the proposed Review is recommended.

*Clinical Review articles* seek to address the everyday needs of practitioners working ‘in the trenches,’ and are practical in nature. Inquiries about potential topics are welcome. Authors can propose topics for Clinical Review articles by submitting their proposal to support@jaacap.org. Including an outline of the proposed Clinical Review is recommended.

*Letters to the Editor* do not require pre-approval. *JAACAP* invites reader comments on published articles, as well as issues of concern and interest to child and adolescent psychiatry. The editor reserves the right to solicit and publish responses from the authors of articles and from others, in response to letters; the author(s) of the original letter waive(s) the right to review or respond to those responses. *JAACAP* will acknowledge receipt of letters but reserves the right to decide not to publish the letter. Letters submissions should be blinded and limited to 750 words or fewer, including references, and cite 5 or fewer references prepared according to *Journal* style.

*Other*: Ideas and submissions for Translations, Clinical Perspectives, special series, or other articles are welcome. Authors are encouraged to seek approval from the editor prior to submission. In general, *JAACAP* solicits contributions to editorials and the Book Forum. Interested authors are encouraged to contact support@jaacap.org to propose potential submissions.
In addition, submission of an article implies that the work described has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis or as an electronic preprint; see http://www.elsevier.com/postingpolicy), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere including electronically in the same form, in English or in any other language, without the written consent of the copyright holder. Each publication should report enough new data to make a significant and meaningful contribution to the development of new knowledge or understanding, and therefore JAACAP does not accept small amounts of data from the same study or research project.

When data from a study are reported in more than one publication, the author(s) should note in the cover letter and in the submission itself when and where parts of the sample have been published before. This includes data on any of the same participants that have been published, are in press, have been submitted elsewhere, or are in preparation, regardless of authorship. The authors should directly address the relevance of this new submission in light of these other publications and why this submission warrants independent publication. Published papers from the same project that are closely related to the submission or contain key methodological descriptions must be cited in the manuscript, and copies of them must be included at the time of submission (files are blinded to reviewers).

AUTHORSHIP (EFFECTIVE JANUARY 1, 2016)

To qualify for authorship in JAACAP, each author must have made a significant contribution to the conception or completion of the manuscript and be willing to share the responsibility for the content of the paper. Specifically, each of the authors must have made a direct and substantial contribution to the following areas:

1. Conception or design of the work; or the acquisition, analysis, or interpretation of data for the work; AND
2. Drafting the work or revising it critically for important intellectual content; AND
3. Final approval of the version to be published; AND
4. Agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

These guidelines are based on the ICMJE Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly Work in Medical Journals (http://www.icmje.org).

In addition to being accountable for parts of the work he or she has done, an author should be able to identify which co-authors are responsible for specific other parts of the work. In addition, authors should have confidence in the integrity of the contributions of their co-authors. All those designated as authors should meet all four criteria for authorship, and all who meet the four criteria should be identified as authors. Those who do not meet all four criteria should be acknowledged upon submission of the manuscript and on the title page. If the manuscript is accepted, these persons’ names and employer(s) will appear in the acknowledgments section of the manuscript in print and online.

FUNDING, ACKNOWLEDGEMENTS, AND CONFLICT OF INTEREST/DISCLOSURE

Authors must identify the source of financial support for the conduct of the research and/or preparation of the article and briefly describe the role of the sponsor(s), if any, in study design; the collection, analysis and interpretation of data; writing of the report; and the decision to submit the article for publication. If the funding source(s) had no such involvement, then this should be stated explicitly.

All authors must disclose any and all financial and personal relationships with other people or organizations that could influence or be perceived to influence their work. This disclosure includes direct or indirect financial or personal relationships, interests, and affiliations whether or not directly related to the subject of the paper that have occurred over the last two years, or that are expected in the foreseeable future. This disclosure includes, but is not limited to, grants or funding, employment, affiliations, patents (in preparation, filed, or granted), inventions, honoraria, consultancies, royalties, stock options/ownership, or expert testimony. If an author (or authors) has/have no conflicts of interest to declare, this must be stated explicitly. For example, “Dr. Stearns reports no biomedical financial interests or potential conflicts of interest.” Authors may contact the Editorial Office with questions or concerns but should err on the side of inclusion when in doubt.

JAACAP requires that a properly completed Manuscript Submission Form (MSF), signed by all authors, be included with the submission in order for it to be considered for publication. The MSF is available online at http://jaacap.edmgr.com. Multiple forms are allowed. Submissions of revised manuscripts do not require an updated MSF unless the author list or reported information has changed, or revisions are requested by the Editorial Office. Forms with signatures “on behalf of” or “for” other authors will not be accepted. Authors who are not allowed to transfer copyright must complete this form. The Editorial Office requests that the signed MSF be included at the time of submission. If an author is unable to provide the MSF electronically, a faxed copy to 202-330-5097 will be accepted. The author must then indicate during the submission process that the MSF is being sent separately.

NOTE: The box in Section 2 of the MSF must contain the funding, acknowledgments, and financial disclosures of all authors. If the required material will not fit within the box, place the information on a separate page and insert “See Attachment” in the box on the form.

Upload this page along with the MSF(s) in the same file.

All authors are required to acknowledge that the disclosures are complete for both themselves and their coauthors, to the best of their knowledge, when completing the MSF. If authors sign multiple forms, each form must contain the same information (i.e. complete funding and acknowledgement information for the article and disclosure statements for each author). Manuscripts that fail to include the complete statements of all authors upon submission will be returned to the corresponding author and will delay the processing and evaluation of the manuscript.

Funding, acknowledgements, and authors’ disclosures will accompany accepted and published manuscripts in print and online. Authors are responsible for ensuring that their final, accepted manuscript and page proofs provide accurate and complete disclosures as described in the preceding paragraphs.

INSTITUTIONAL REVIEW

Research involving human beings must be conducted ethically with due regard for informed consent. Please include a statement in the manuscript indicating that the research was approved or exempted from the need for review by the responsible review committee (institutional or national). If no formal ethics committee is available, a statement indicating that the research was conducted according to the principles of the Declaration of Helsinki should be included. Manuscripts that report animal experiments must include a statement in the
Method section stating that the study was approved by an Institutional Review Board.

PATIENT ANONYMITY
Patient anonymity must be protected and any identifying information omitted (including but not limited to name, address, chart number, and date of birth). Any submission that has not been approved by an Institutional Review Board but that includes patient information (such as clinical case presentations, clinical images, or case studies) requires the parent/guardian’s signed permission for publication and the child’s written assent (if the child is able). A copy of this written assent is required at the time of submission. A form for written assent is available at www.jaacap.org.

ETHICS AND MISCONDUCT
Scientific misconduct includes fabrication, falsification, and plagiarism with the intent to deceive by the authors. Honest error or differences in interpretation are not considered misconduct. Breaches of publication ethics include but are not limited to: failure to reveal financial conflicts of interest; omitting a deserving author or adding a noncontributing author; misrepresenting publication status in the reference list; self-plagiarism without attribution; duplicate or redundant publication; and inclusion of one or more sentences verbatim from another source without citing the original source and putting the sentence(s) in quotation marks.

JAACAP takes seriously its responsibility to ensure scientific integrity and will pursue any allegations of misconduct. In membership with the Committee on Publication Ethics (COPE), the JAACAP editors adhere to the COPE Code of Conduct, which can be found at http://publicationethics.org/resources/code-conduct. Charges of academic dishonesty, including plagiarism, duplicate, and redundant publication will be managed according to COPE guidelines.

Manuscripts may be screened with iThenticate software as part of the CrossCheck initiative to detect and prevent plagiarism. More information about CrossCheck can be found at http://www.crossref.org/crosscheck.html.

JAACAP is published by Elsevier Inc. For more information on ethics in publishing and ethical guidelines for journal publication, see http://www.elsevier.com/publishingethics and http://www.elsevier.com/journal-authors/ethics.

CLINICAL TRIALS REGISTRATION
In accordance with ICMJE guidelines, JAACAP requires the registration of clinical trials in a public trials registry at or before the time of first patient enrollment as a condition of consideration for publication. A clinical trial is defined as any research project that prospectively assigns people or a group of people to an intervention, with or without concurrent comparison or control groups, to study the cause-and-effect relationship between a health-related intervention and a health outcome. ICMJE accepts registration in any registry that is a data provider to the WHO ICTRP. The clinical trial registry website and the clinical trial number must be included at the end of the “Conclusion” section in the abstract (this information will not count toward the word limit). Example: Trial Title; http://clinicaltrials.gov; NCT00xxxxxxx. This information must also be provided in the manuscript submission system upon submission.

ACCESS AND REUSE POLICIES
FUNDING BODY AGREEMENTS AND POLICIES
Elsevier has established agreements and developed policies to allow authors whose articles appear in journals published by Elsevier to comply with potential manuscript archiving requirements as specified as conditions of their grant awards. To learn more about existing agreements and policies, please visit http://www.elsevier.com/fundingbodies.

OPEN ACCESS OPTIONS
The journal offers open access options for self-archiving of the final published article. Authors may choose to make their articles freely accessible to all, including non-subscribers, for a fee of US $3,000 (for further information on open access, see http://www.elsevier.com/about/open-access/open-access-options). Please note that authors may only make this choice after receiving notification that their article has been accepted for publication, to avoid any potential perception of conflict of interest. The fee excludes taxes and other potential costs such as color charges. In some cases, institutions and funding bodies have entered into agreement with Elsevier to meet these fees on behalf of their authors. Details of these agreements are available at http://www.elsevier.com/fundingbodies. Authors of accepted articles who wish to take advantage of this option should complete and submit the order form (available at http://www.elsevier.com/locate/openaccessform.pdf). This is purely optional, and authors may continue to have their articles published in the usual subscription format without open access. Authors’ publication choice will have no effect on the peer review process or acceptance of submitted articles.

SUBSCRIPTION OPTIONS
There is no fee for subscription (non-open access) publication. These articles are available to subscribers as well as developing countries and patient groups through Elsevier’s access programs (http://www.elsevier.com/access). Authors’ publication choice will have no effect on the peer review process or acceptance of submitted articles.

AUTHOR RIGHTS
Whatever access option is selected, authors retain significant rights to use and share their own published articles. More information can be found at http://www.elsevier.com/authorsrights.

COPYRIGHT/OWNERSHIP OF A MANUSCRIPT
With few exceptions, published manuscripts become the property of the American Academy of Child and Adolescent Psychiatry. They may not be published or reproduced in whole or in part without written permission. Permission to reproduce material published in JAACAP must be obtained from the Publisher by visiting http://www.jaacap.com/content/permission.

Authors must identify figures, tables, or other materials that are taken or adapted from another source. Written permission should be obtained from the copyright holder. Such permission should be included in the manuscript submission. Failure to provide permission will delay the processing of the manuscript.

WAIVER OF RESPONSIBILITY
Statements and opinions expressed in articles and communications herein are those of the author(s) and not necessarily those of the
SUBMISSION

Authors are encouraged to read the preparation and submission instructions carefully. Manuscripts that do not conform to these guidelines will be returned to the author for correction before the manuscript is processed. Failure to follow these procedures may result in significant delays in processing your manuscript.

Please submit your article online at http://jaacap.edmgr.com. Submission to JAACAP is conducted entirely online, and you will be guided through the process to answer submission questions, provide necessary information, and upload your manuscript files. The system automatically converts source files to a single PDF file of the manuscript, which is used in the peer review process. In order to minimize disruptions when submitting a new manuscript, verify there are no security settings enabled on any files to be uploaded. Editorial Manager will not allow files to be uploaded if protected. Please note that even though manuscript source files are converted to PDF files at submission for the review process, these source files are needed for further processing after acceptance. All correspondence, including notification of the editor’s decision and requests for revision, is conducted via email.

SUBMISSION QUESTIONS

Upon online submission of the manuscript using Editorial Manager, the corresponding author is required to indicate agreement to one of the following copyright statements. Manuscripts will not be reviewed until this requirement is met.

- For papers submitted by all authors except those whose work is part of their employment with the United States federal government:
  o In consideration of the Journal’s taking action in reviewing and editing my (our) submission, (title of article), the author(s) undersigned hereby transfer(s), assign(s), or otherwise convey(s) all copyright ownership to the American Academy of Child and Adolescent Psychiatry in the event that such work is published in the Journal. I (we) warrant that the material contained in the manuscript represents original work, has not been published elsewhere, and is not under consideration for publication elsewhere.

- For papers prepared as part of an author’s employment with the US federal government:
  o The work described in the above manuscript was done as part of my (our) employment with the US federal government and is therefore in the public domain. The author(s) undersigned warrant(s) that the material contained in the manuscript represents original work, has not been published elsewhere, and is not under consideration for publication elsewhere.

In addition, the corresponding author must address whether any of the content of the manuscript has been written or edited by anyone other than those individuals listed as an author on the submission. If there is an additional contributor, the individual’s name and employer should be listed. If the individual’s participation was supported by a third party, such as the study sponsor, this must be explicitly stated. If the manuscript is accepted, this information will be published in the acknowledgements section of the article.

The corresponding author must also confirm that any tables and figures submitted with the manuscript are original and that the author(s) is the copyright holder, or that permission has been obtained from the copyright holder. Costs associated with obtaining permission to reuse material are the responsibility of the author. More information regarding copyright can be found at http://www.elsevier.com/wps/find/authorsviewauthors/rights.

CORRESPONDING AUTHOR

According to ICMJE guidelines, the corresponding author is the one individual who takes primary responsibility for communication with the journal during the manuscript submission, peer review, and publication process, and typically ensures that all the journal’s administrative requirements, such as providing details of authorship, ethics committee approval, clinical trial registration documentation, and gathering conflict of interest forms and statements, are properly completed, although these duties may be delegated to one or more coauthors. The corresponding author should be available throughout the submission and peer review process to respond to editorial queries in a timely way, and should be available after publication to respond to critiques of the work and cooperate with any requests from the journal for data or additional information should questions about the paper arise after publication.

Corresponding authorship is limited to individuals who qualify for and are listed as authors on the manuscript. The responsibility of serving as the corresponding author must remain with an assigned author and cannot be delegated to a third party or non-author individual. Author profiles in Editorial Manager must include appropriate contact information and third party contact information, such as email addresses, will not be accepted. This policy is intended to protect the journal and authors.

By electing to approve and finalize the submission of a manuscript as the corresponding author, the author’s acknowledgment and acceptance of the following responsibilities is assumed: (1) act as the sole correspondent with the Editorial Office and the publisher, Elsevier, on all matters related to the submission, including review and correction of the typeset proof; (2) assurance that all individuals who meet the criteria for authorship are included as authors on the manuscript title page, and that the version submitted is the version that all authors have approved; and (3) assurance that written permission has been received from all individuals whose contributions to the work are included in the Acknowledgments section of the manuscript, with the exception of individuals that are listed in their capacity as members of a research group.

During the submission process, the corresponding author will be asked to provide:

- A running head (an abbreviated form of the main title) of 40 or fewer characters and spaces
- Full names, degrees, email addresses, and affiliations for each author
- A structured abstract
- A region of origin for the manuscript
- A word count (including the title page, abstract, text, references, tables, figures, and figure legends)
- Five keywords or terms
- The name(s) of the study’s statistical expert(s), if used
- Clinical trials registration information (where applicable)
- Answers to submission questions described above.
- Published articles or “in press” manuscripts that are closely related to this submission or contain key methodological descriptions
MANUSCRIPT PREPARATION

Authors are encouraged to follow the ICMJE Uniform Requirements for Manuscripts Submitted to Biomedical Journals (available at: http://www.icmje.org/); this is the format used in PubMed/MEDLINE. They should strive for a concise article that is unencumbered by excessive detail.

Each manuscript submitted to JAACAP must contain the following components: cover letter, title page, blinded manuscript, and Manuscript Submission Form. The review of manuscripts lacking any of these parts may be delayed until the submission is complete.

- After the title page, number pages consecutively throughout.
- Other than on the title page and Manuscript Submission Form(s), blinding is the responsibility of the author.
- All files (cover letter, title page, blinded manuscript file, figures, Manuscript Submission Form(s), and supplementary materials) must be uploaded separately during the submission process.
- Files should be labeled with appropriate and descriptive file names (e.g. SmithText.doc, SmithFig1.eps).
- Acronyms must be spelled out on first use in text, and where used in tables or figures, in each of their legends. Use the generic term for a drug. When it is necessary to refer to the proprietary name, list it in parentheses after the generic term, followed by the register mark (®).
- When using direct quotations, cite the page number for the quotation along with the source in the reference list.
- The manuscript file should be uploaded in its native format, such as .doc. Do not upload any text files as .pdf or .xls.
- Follow internationally accepted rules and conventions; use the international system of units (SI). If other units are mentioned, provide data sources and study selection (the number of articles included where applicable).

LANGUAGE

Manuscripts should be written in English, and American usage is preferred. Papers with serious deficiencies in English may be returned without review. Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use a professional editing service, such as the English Language Editing service available from Elsevier’s WebShop at http://webshop.elsevier.com/languageediting. JAACAP does not endorse any such services. Use of an editing service has no bearing on the editor’s ultimate decision.

COMPONENTS

Cover Letter
A cover letter is required for all articles and should be uploaded as a separate file. This letter should outline the significance of the work and should make reference to any other publications that utilize the same data set (see Divided Publication).

Title Page
Title: The manuscript title should be concise and informative, as titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible. Titles should be less than 100 characters and a maximum of 15 words. A running title of less than 40 characters should also be included.

Author names and affiliations: Include the full names of all authors and their highest academic degree. Where the family name may be ambiguous (e.g., a double name), please indicate this clearly. Include all authors’ academic or professional affiliations written out in paragraph form (not footnoted) along with the corresponding author’s complete contact information (name, address, telephone and fax numbers, and e-mail address).

Corresponding author: Clearly indicate who will handle correspondence at all stages of review, production, and publication. Ensure that phone numbers (with country and area code) are provided in addition to the e-mail address and the complete postal address. Contact details must be kept up to date by the corresponding author. Multiple corresponding authors are not allowed.

Acknowledgements: Include an acknowledgement paragraph that includes any funding directly related to the content of the manuscript, any necessary attribution/copyright information, and the name(s) of the study statistical expert(s), if applicable. Academic or professional affiliations and degree(s) must be included for any non-author individuals listed in the acknowledgement.

Presentation information (if applicable): Example: This study was presented as an abstract at the American Academy of Child and Adolescent Psychiatry’s 60th Annual Meeting, Orlando, FL, October 22-27, 2013.

Keywords: A maximum of 5 keywords should be included. For optimum discoverability, use MeSH vocabulary (see https://www.nlm.nih.gov/mesh/).

Text
Text should begin on the second numbered page, and should be divided into the following sections: Abstract, Introduction, Method, Results, Discussion, References, and Tables (if required). All components must be in a single file, except any figures, which should be uploaded separately. As noted below, this formatting is not required for Clinical Review articles, but the suggested components should be included where applicable.

Abstract
Abstract: A structured abstract, by means of appropriate headings, should provide the context or background for the research and should state its purpose, basic procedures (selection of study participant or laboratory animals, observational and analytical methods), main findings (giving specific effect sizes and their statistical significance, if possible), and principal conclusions. It should emphasize new and important aspects of the study or observations.

The structured abstract for New Research articles should be a maximum of 250 words and must be formatted with sections entitled as follows: Objective, Method, Results, Conclusions.

The structured abstract for Review articles should be a maximum of 250 words and must be formatted with sections entitled as follows: Objective, Method, Results, Conclusion. The Method section should provide data sources and study selection (the number of articles reviewed and the selection process). This formatting is not required for Clinical Review articles.

Introduction: Include the purpose of the study, a review of recent relevant literature, and an a priori hypothesis.

Method: The guiding principle of the Method section should be clarity about how and why a study was done in a particular way. The
Method section should aim to be sufficiently detailed such that others with access to the data would be able to reproduce the results. Include the participants/patients and, if appropriate, include information on whether parts of these data have been published elsewhere; sampling frame, sampling, and recruitment strategies; and inclusion and exclusion criteria. Consider inclusion of determination of sample size (include power calculation).

Reporting guidelines have been developed for different study designs; examples include CONSORT (www.consort-statement.org) for randomized trials, STROBE for observational studies (http://strobe-statement.org/), PRISMA for systematic reviews and meta-analyses (http://prisma-statement.org/), and STARD for studies of diagnostic accuracy (www.stard-statement.org/). Authors are strongly encouraged to follow these guidelines because they help authors describe the study in enough detail for it to be evaluated by editors, reviewers, readers, and other researchers evaluating the medical literature. Authors of Review manuscripts are encouraged to describe the methods used for locating, selecting, extracting, and synthesizing data. Good sources for reporting guidelines are the EQUATOR Network (www.equator-network.org/home/) and the NLM's Research Reporting Guidelines and Initiatives (www.nlm.nih.gov/services/research_report_guide.html).

Include information about sample composition including demographic details. Use current and coded occupational categories, four educational attainment categories (without HS diploma, HS graduate without college education, some college education, degree from 4-year college or more), and five race/ethnicity categories (e.g., US Bureau of Census).

For measures, authors should describe variables measured and instruments used. Authors must provide sufficient information about rating scales and other measures so that readers can access them for their own use; unpublished instruments may be made available via supplemental material at the request of the editor.

If a manual-based treatment is used, authors must include information on how to obtain the manual. The online-only content feature must give full credit to the original source, and permission from the copyright holder to reproduce the material must be provided.

Data Analysis: Describe all analyses with names of specific statistical tests used and how these correspond to the hypotheses postulated in the introduction. Justify and clearly reference the use of unusual statistical techniques. If multiple comparisons are unavoidable, use an appropriate adjustment to control type I error. State whether tests were one- or two-tailed.

Results: Summarize statistics and when reporting significant results, include the statistical test used, the value of the test statistic, degrees of freedom, and p values. When appropriate, report effect sizes and/or confidence intervals on the main findings.

Discussion: Include the clinical implications, limitations, and conclusions of the manuscripts findings, but do not use subheadings.

References

Citation in text

Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication.' Citation of a reference as ‘in press’ indicates that the item has been accepted for publication.

Reference list

Indicate references by consecutive superscript Arabic numerals in the order in which they appear in the text. The numerals are to be used outside periods and commas; inside colons and semicolons. For further detail and examples, please refer to the AMA Manual of Style, A Guide for Authors and Editors, Tenth Edition, (see http://www.amamanualofstyle.com/). Journal names should be abbreviated according to the List of Title Word Abbreviations: http://www.isnn.org/2-22661-LTWA-online.php.

Sample reference to a journal publication:

Sample reference to a book:

Sample reference to a chapter in an edited book:

Tables and Figures

The combined number of tables and figures should not exceed 5 and should comprise no more than a total of 5 double-spaced manuscript pages. Number items consecutively in Arabic numerals according to the order of citation in the text. All items must be cited. If a table, figure, or any data therein have been previously published, a footnote must give full credit to the original source, and permission from the copyright holder to reproduce the material must be provided.

Tables should be cited in the text, numbered consecutively (i.e., Table 1, Table 2, Table 3) in the order of their mention, and include brief descriptions. Place tables after the reference list in the blinded manuscript file. Tables that constitute a single column are actually lists and should be included in the text as such. Table footnotes should use superscript lowercase letters rather than symbols.

Figures should be cited in the text, numbered consecutively (i.e., Figure 1, Figure 2, Figure 3) in the order of their mention, and include brief descriptions. The preferred file format for figures and graphics is EPS, TIF, or PDF. Please upload high quality versions of each figure individually (i.e., two figures should be uploaded separately as Figure 1 and Figure 2). Parts/panels in composite figures should be labeled with capital letters (A, B, C). Each figure should be consistent in color, size, and font, and be designed proportionally so that each item within it is to scale (particularly numbers, letters, and symbols) so it can later be sized as needed without loss of legibility or quality. Figure titles and legends should be included on a separate page in the manuscript file following the reference list and any tables, rather than in the figure file itself.

Color illustrations are accepted. Although the cost of color printing must be paid by the author, authors may choose, at no cost, for illustrations to be reproduced in black and white in the print journal and appear in color for the online version. Color illustrations are printed at a rate of $650 (US dollars) for the first figure, and $100 for each additional figure. Authors may supply black-and-white versions of color figures for printing purposes.

does not endorse any such services. Use of such services has no bearing on the editor's ultimate decision.

Supplemental Material
Authors may be invited to submit supplementary material to enhance their article’s text. Supplementary material is made available in the online article but not published in print. All such material may be posted exactly as it is received and should be submitted as intended for viewing. Thus, all supplementary figures and tables should have their legends/keys included in the relevant file. All supplementary information should be saved in a separate file(s), and denoted as such when uploading. Supplemental material must be called out in the manuscript text (e.g. “see Table S1, available online”), and the files should be labeled Table S1, Figure S1, Figure S2, etc. Supplemental text should be labeled and called out as Supplement 1, Supplement 2, etc. Permission from the copyright holder must be obtained for any supplemental material that has been previously published in print or online.

Video Data
Elsevier accepts video material and animation sequences to support and enhance scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file’s content. In order to ensure that your video or animation material is directly usable, please provide the files in one of the recommended file formats with a preferred maximum size of 50 MB. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect: http://www.sciencedirect.com. Please supply ‘stills’ with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages at http://www.elsevier.com/artwork. Note: Since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content. For any further information please visit the customer support site at http://support.elsevier.com.

MANUSCRIPT PROCESSING
Selection of reviewers will be made by the editors. As a general rule, papers will be evaluated by three independent reviews and, on occasion, an additional review for statistical adequacy may also be obtained. Reviewer comments are generally communicated to authors within 4-6 weeks of submission unless otherwise notified by the Editorial Office. A paper is judged by five essential criteria, namely that the material is: ethically obtained and presented; original; methodologically sound; an important addition to the current literature; and comprehensible. JAACAP excludes reviewers who work at the same institution as any author, or those who have or report any other obvious conflict of interest. JAACAP’s review process is double-blind: the identity of individual reviewers remains confidential to the other reviewers and to the authors and vice versa.

Authors should be aware that manuscripts may be returned without review when the editors deem that the paper is of insufficient general interest for the broad readership of JAACAP, or that the scientific priority is such that it is unlikely to receive favorable reviews. The editor makes the final decision to accept, reject, or request revision of any manuscript. A request for revision does not guarantee ultimate acceptance of the revised manuscript. Editorial rejection (without peer review) expedites the editorial process and allows authors to submit manuscripts elsewhere without delay.

Revised manuscripts should include a unique file (separate from the cover letter) with blinded responses to reviewers' comments, and when applicable, the Managing Editor’s note. Please include the Manuscript Submission Form when uploading the revised manuscript.

FOLLOWING ACCEPTANCE
ARTICLES IN PRESS
Accepted papers are subject to editorial revisions and copyediting. Accepted articles are published online, prior to full copyediting, within one week of final acceptance. They will be immediately citable, with an assigned digital object identifier (DOI). Corrected proofs are published online within several weeks of final acceptance. Articles generally appear in the journal within 6 months of acceptance. The contents of the paper remain the responsibility of the author.

DIGITAL OBJECT IDENTIFIER (DOI)
The Digital Object Identifier (DOI) may be used to cite and link to electronic documents. The DOI consists of a unique alpha-numeric character string, which is assigned to a document by the publisher upon the initial electronic publication. The assigned DOI never changes. Therefore, it is an ideal medium for citing a document, particularly ‘articles in press, because they have not yet received their full bibliographic information. Example of a correctly given DOI (in URL format): http://dx.doi.org/10.1016/j.physletb.2010.09.059. When you use a DOI to create links to documents on the web, the DOIs are guaranteed never to change.

PROOFS
One set of page proofs (as PDF files) will be sent by e-mail to the corresponding author, or a link will be provided in the e-mail so that authors can download the files themselves. Elsevier now provides authors with PDF proofs, which can be annotated; for this you will need to download Adobe Reader, available free from http://get.adobe.com/reader. Instructions on how to annotate PDF files will accompany the proofs (also given online).

If you do not wish to use the PDF annotations function, you may list the corrections (including replies to the Query Form) and return them to Elsevier in an e-mail. Please list your corrections quoting line number. If, for any reason, this is not possible, then mark the corrections and any other comments (including replies to the Query Form) on a printout of your proof and return by fax, or scan the pages and e-mail. Please use this proof only for checking the typesetting, editing, completeness, and correctness of the text, tables, and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the editor. Elsevier will do everything possible to get your article published quickly and accurately. As such, authors are asked to provide corrections within 48 hours. It is important to ensure that all corrections are provided in one communication: please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely the responsibility of the author. Note that Elsevier may proceed with the publication of the article if no response from the author is received.
OFFPRINTS
The corresponding author, at no cost, will be provided with a PDF file of the article via e-mail (the PDF file is a watermarked version of the published article and includes a cover sheet with the journal cover image and a disclaimer outlining the terms and conditions of use). For an extra charge, paper offprints can be ordered via the offprint order form that is sent once the article is accepted for publication. Both corresponding and co-authors may order offprints at any time via Elsevier’s WebShop (http://webshop.elsevier.com/myarticleservices/offprints).

For inquiries relating to the submission of articles, please visit http://www.jaacap.org or contact support@jaacap.org. Contact details for questions arising after acceptance of an article, especially those relating to proofs, will be provided by the publisher.

MEDIA
All articles published in JAACAP are embargoed until the day they are published online at http://jaacap.org. Contents of the publications should not be released to or by the media or government agencies prior to the embargo date. A limited number of JAACAP articles will be selected for press release development. This selection is made by the editor in consultation with the Editorial Office and the Publisher. Press Releases are posted and archived at http://www.jaacap.com/content/press_releases.

Medical and health journalists may request the full text of embargoed articles by contacting the Editorial Office at support@jaacap.org. Upcoming articles can be found under Articles in Press on http://www.jaacap.com/inpress. Press officers from research institutions may inquire about projected publication dates for articles by authors affiliated with their organization.
