About TCS Enterprise Security and Risk Management Unit

Leveraging our rich experience in enterprise security, TCS helps global enterprises across verticals manage risks, ensure regulatory compliance, proactively protect critical information assets against emerging threats, achieve resilience, and recover rapidly from security incidents.

TCS has a successful track record of executing numerous engagements globally, delivering domain integrated security solutions fully aligned with clients’ objectives. Our global service infrastructure, including the shared services Security Operations Center (SOC) and Forensics Labs, backed by the capabilities of our certified security consultants, make TCS a strategic partner of choice for nearly half of the Fortune 500 companies.

Our Security Innovation labs foster research and innovation in the field of data privacy, and have yielded multiple patents and intellectual properties in data protection and cryptographic products. We leverage our alliances with all major security vendors, including IBM, CSGO and Oracle, to deliver end-to-end services and solutions across the security landscape from consulting to implementation and managed services.

In the aftermath of the 2008 financial crisis, large organizations around the world have strengthened their corporate governance and risk management systems, in order to comply with an increasingly onerous and continuously evolving regulatory regime. This trend has played out across a number of industries amid persisting uncertainty over the business environment and broader economic outlook. Yet, senior management teams do not get a single view of organizational risk. Not surprisingly, quite a few corporations consider enterprise risk management (ERM) and compliance management more as burdensome business costs, rather than as drivers of competitive advantage.

We believe large companies can indeed convert these perceived ‘pain points’ into long-term differentiating engines of business growth. Our Governance, Risk, and Compliance (GRC) Services help enterprises mitigate risks and adhere to governance and regulatory norms in a cost-effective manner, while ensuring information protection and business resilience.

Overview
Large enterprises continue to face a number of challenges when it comes to aligning risk and governance management with their strategic business goals. A number of companies treat risk management as an exercise in compliance, rather than one that is part of a broader holistic program designed to help deliver business outcomes. There is also a lack of a single, consistent pan-organizational view on what exactly constitutes a risk, leading to overlapping and duplication of risk management activities. Moreover, the focus of ERM systems at several companies is skewed towards technology, rather than all components of business operations – such as people, processes, and suppliers. Composing the woe of big enterprises is the continuing rise in incidents related to information security, as well as the recurring instances of audit failures. Many corporations are also struggling with issues pertaining to non-compliance with regulations and governance guidelines.

Keeping these real-world challenges in mind, TCS has devised a GRC framework that combines the salient features of both ERM and compliance management. We enable enterprises to proactively and efficiently manage risks and achieve compliance - so that you realize a tangible return on investments (RoI).

Our Solution
TCS Governance, Risk, and Compliance Services are rooted in our conviction that large-scale enterprises can ensure cost-effective and sustainable risk and compliance management only if they pursue an integrated approach in addressing these requirements. Our GRC solution includes IT Governance, Business Resilience, Governance and Reporting, Operational Risk Management, and Regulatory and Compliance Management services that help you:

- Align people, processes, and technology with governance, manage risks proactively, and comply with regulations in a cost-effective manner, thereby boosting operational productivity.
- Strengthen your corporate governance and risk management systems, in order to comply with an increasingly onerous and continuously evolving regulatory regime. This enables informed decision making.
- Ensure cost-effective and sustainable risk and compliance management only if they pursue an integrated approach in addressing these requirements.
- Achieve mature governance solutions with an integrated approach to tackling the challenges of risk and compliance management.
- Enable our clients to achieve mature governance, manage risks proactively, and comply with regulations in a cost-effective manner.

Benefits
Our Governance, Risk, and Compliance Services deliver several measurable benefits that are aligned with your business goals – metrics that CEOs would review and evaluate. GRC provides the senior management with a single-window visibility into enterprise risks, ensuring effective monitoring, review, and improvement. This enables informed decision making.

- Our services result in reduced compliance costs, as well as a significant decline in incident and outage-related costs, through effective information security management and business continuity processes. We help optimize controls relating to people, processes, and technology, thereby boosting operational productivity.
- All these gains combine to enhance your competitiveness and brand reputation and open up increased revenue-growth opportunities.

The TCS Advantage
Our services harmonize the best of ERM and compliance solutions with an integrated approach to tackling the challenges of risk and compliance management. We enable our clients to achieve mature governance, manage risks proactively, and comply with regulations in a cost-effective manner.

Our large pool of professionally certified, multi-disciplinary risk management and compliance professionals has successfully delivered solutions across different verticals. We’ve gained deep industry-level insight and technological expertise from designing and implementing sustainable risk and compliance management programs for more than 100 Fortune 500 companies.

In order to optimize cost-effective execution through our unique off-the-shelf model, we’ve developed strong strategic partnerships with technology vendors, such as Recovery Planner, Sanovi, RSA, IBM, and MetricStream. We leverage these partnerships to develop GRC solutions, including business continuity management (BCM) and disaster recovery management solutions.
