Motor vehicle crashes are a leading cause of death in the United States. According to the National Highway Traffic Safety Administration, the number of people who died in crashes across the country decreased from 37,423 in 2008 to 33,808 in 2009. In addition, the number of people injured declined for the ninth year in a row to just over 2.2 million. Even in light of these reductions, motor vehicle crashes remain a significant problem. To improve safety, a coordinated response is needed from all levels and branches of government – Federal agencies, State legislatures, city and county councils, and local agencies. A coordinated response should result in increased safety funding, more effective safety laws, and enhanced education, enforcement, engineering, and emergency response efforts targeting critical safety issues. As part of the overall strategy to reduce fatalities and serious injuries, Utah has an approved Comprehensive Safety Plan (CSP), which identifies the following emphasis areas: reduce roadway departure crashes, increase the use of safety restraints, reduce impaired driving, reduce aggressive driving, reduce drowsy driving, reduce distracted driving, improve intersection safety, and improve younger driver safety. To obtain a copy of the CSP, contact the State DOT or FHWA Division Office Safety Specialist.

### Fatality Trends

</table>

Fatality rate is calculated based on State fatalities per 100 million vehicle miles traveled (VMT). Total fatalities are taken from the Fatality Analysis Reporting System (FARS): www.nhtsa.gov/FARS

### Safety Focus Areas

This chart represents national safety focus areas and their corresponding percentages of total crash fatalities in the State and in the Nation. More than one of these focus areas may be involved as contributing factors in a single crash.

1. Non-interchange intersection/intersection-related crashes.
2. Non-intersection crashes in which a vehicle crosses an edge line, a centerline, or leaves the traveled way. Includes intersections at interchange areas.
3. Crashes involving a driver with a blood alcohol content (BAC) >.01+.
4. Unrestrained passenger vehicles occupant fatalities. Does not include unknown restraint use.
For the purposes of this document, the terms urban and rural are based on the definition published in the American National Standard (ANSI D16.1-1996).
