Teacher’s Guide to Using the
Chapter 8 Resource Masters

The Chapter 8 Resource Masters includes the core materials needed for Chapter 8. These materials include worksheets, extensions, and assessment options. The answers for these pages appear at the back of this booklet.

All of the materials found in this booklet are included for viewing and printing on the TeacherWorks Plus™ CD-ROM.

Chapter Resources

**Graphic Organizer** (page 1) This master is a tool designed to assist students with comprehension of grade-level concepts. You can use this graphic organizer in coordination with the appropriate lesson. While the content and layout of these tools vary, their goal is to assist students by providing a visual representation from which they can learn new concepts.

**Student Glossary** (page 2) This master is a study tool that presents the key vocabulary terms from the chapter. You may suggest that students highlight or star the terms they do not understand. Give this list to students before beginning Lesson 8-1. Remind them to add these pages to their mathematics study notebooks.

**Anticipation Guide** (page 6) This master is a survey designed for use before beginning the chapter. You can use this survey to highlight what students may or may not know about the concepts in the chapter. If feasible, interview students in small groups, asking them the interview questions in the guide. There is space for recording how well students answer the questions before they complete the chapter. You may find it helpful to interview students a second time, after completing the chapter, to determine their progress.

**Game** (page 7) A game is provided to reinforce chapter concepts and may be used at appropriate times throughout the chapter.

Resources for Lessons

**Reteach** Each lesson has an associated Reteach worksheet. In general, the Reteach worksheet focuses on the same lesson content but uses a different approach, learning style, or modality than that used in the Student Edition. The Reteach worksheet closes with computational practice of the concept.

**Skills Practice** The Skills Practice worksheet for each lesson focuses on the computational aspect of the lesson. The Skills Practice worksheet may be helpful in providing additional practice of the skill taught in the lesson. It also contains word problems that cover the skill. Spaces for students’ answers are provided on the worksheet.

**Homework Practice** The Homework Practice worksheet provides an opportunity for additional computational practice. The Homework Practice worksheet includes word problems that address the skill taught in the lesson. Spaces for students’ answers are provided on the worksheet.

**Problem-Solving Practice** The Problem-Solving Practice worksheet presents additional reinforcement in solving word problems that apply both the concepts of the lesson and some review concepts.

**Enrich** The Enrich worksheet presents activities that extend the concepts of the lesson or offer a historical or multicultural look at the lesson’s concepts. Some Enrich materials are designed to widen students’ perspectives on the mathematics they are learning.

Resources for Problem-Solving Lessons

In recognition of the importance of problem-solving strategies, worksheets for problem-solving lessons follow a slightly different format. For problem-solving lessons, a two-page Reteach worksheet offers a complete model for choosing a problem-solving strategy. For each Problem-Solving Strategy lesson, Reteach and Homework
Practice worksheets offer reinforcement of the strategy taught in the Student Edition lesson. In contrast, the Problem-Solving Investigation worksheets include a model strategy on the Reteach worksheets and provide problems requiring several alternate strategies on practice worksheets.

Assessment Options
The assessment masters in the Chapter 8 Resource Masters offer a wide variety of assessment tools for monitoring progress as well as final assessment.

Individual Progress Checklist This checklist explains the chapter’s goals or objectives. Teachers can record whether a student’s mastery of each objective is beginning (B), developing (D), or mastered (M). The checklist includes space to record notes to parents as well as other pertinent observations.

Chapter Diagnostic Assessment This one-page test assesses students’ grasp of skills that are needed for success in the chapter.

Chapter Pretest This one-page quick check of the chapter’s concepts is useful for determining pacing. Performance on the pretest can help you determine which concepts can be covered quickly and which specific concepts may need additional time.

Quizzes Three free-response quizzes offer quick assessment opportunities at appropriate intervals in the chapter.

Mid-Chapter Review This one-page chapter test provides an option to assess the first half of the chapter. It includes both multiple-choice and free-response questions.

Vocabulary Test This one-page test focuses on chapter vocabulary. It is suitable for all students. It includes a list of vocabulary words and questions to assess students’ knowledge of the words.

Oral Assessment This two-page test consists of one page for teacher directions and questions and a second page for recording responses. Although this assessment is designed to be used with all students, the interview format focuses on assessing chapter content assimilated by ELL students. The variety of approaches includes solving problems using manipulatives as well as pencil and paper.

Chapter Project Rubric This one-page rubric is designed for use in assessing the chapter project. You may want to distribute copies of the rubric when you assign the project and use the rubric to record each student’s chapter project score.

Foldables Rubric This one-page rubric is designed to assess the foldables graphic organizer. The rubric is written to the students, telling them what you will be looking for as you evaluate their completed Foldable.

Leveled Chapter Tests
- Form 1 assesses basic chapter concepts through multiple-choice questions and is designed for use with on-level students.
- Form 2A is designed for on-level students and is primarily for those who may have missed the Form 1 test. It may be used as a retest for students who received additional instruction following the Form 1 test.
- Form 2B is designed for students with a below-level command of the English language.
- Form 2C is a free-response test designed for on-level students.
- Form 2D is written for students with a below-level command of the English language.
- Form 3 is a free-response test written for above-level students.
- Extended-Response Test is an extended response test for on-level students.

Student Recording Sheet This one-page recording sheet is for the standardized test in the Student Edition.

Cumulative Standardized Test Practice This three-page test, aimed at on-level students, offers multiple-choice questions and free-response questions.

Answers
The answers for the Anticipation Guide and Lesson Resources are provided as reduced pages with answers appearing in black. Full size line-up answer keys are provided for the Assessment Masters.
Use this graphic organizer to take notes on **Chapter 8: Multiply by Two-Digit Numbers**. Fill in the missing information.

# Student-Built Glossary

This is an alphabetical list of new vocabulary terms you will learn in **Chapter 8: Multiply by Two-Digit Numbers**. As you study the chapter, complete each term’s definition or description. Remember to add the page number where you found the term. Add this page to your math study notebook to review vocabulary at the end of the chapter.

Dear Family,

Today my class started Chapter 8: Multiply by Two-Digit Numbers. I will be learning to multiply by multiples of 10 and two-digit numbers. I will also be learning to use rounding to estimate products.

Here are my vocabulary words and an activity that we can do together.

Love, ________________

Key Vocabulary

**Distributive Property of Multiplication** The property that states that to multiply a sum by a number, you can multiply each addend by the same number and add the products. Example: $4 \times (1 + 3) = (4 \times 1) + (4 \times 3) = 16$.

**estimate** A number close to an exact value; an estimate indicates about how much. Example: $47 + 22$ (estimate $50 + 20$), about 70.

**product** The answer to a multiplication problem. It also refers to expressing a number as a product of its factors. Example: $7 \times 2 = 14$, 14 is the product.

**Activity**

Pretend you are selling items in a store. Collect the following items and label them accordingly:

1. book, $10
2. shirt, $15
3. picture frame, $5

If a teacher wanted to buy 10 of the books, how much would it cost? If someone wanted to buy 3 shirts, how much would it cost? If someone wanted to buy 2 picture frames, how much would it cost?

Books to Read

*Anno’s Mysterious Multiplying Jar*
by Mitsumasa Anno

*Amanda Bean’s Amazing Dream*
by Cindy Neuschwander

*One Hundred Hungry Ants*
by Elinor Pinczes
Estimada familia:

Hoy mi clase comenzó el Capítulo 8: Multiplica por números de dos dígitos. Aprenderé a multiplicar por múltiplos de 10 y números de dos dígitos y también a usar el redondeo para estimar productos. A continuación, están mis palabras de vocabulario y una actividad que podemos hacer juntos.

Cariños, _____________

Vocabulario clave

Propiedad Distributiva de la Multiplicación Propiedad que establece que para multiplicar una suma por un número, se puede multiplicar cada sumando por el número y sumar los productos.

estimación Número cercano a un valor exacto. Una estimación indica aproximadamente cuánto.

producto Repuesta de un problema de multiplicación. También se refiere a la expresión de un número como el producto de sus factores. Ejemplo: $7 \times 2 = 14$, 14 es el producto.

Activity
Simulen que venden artículos en una tienda. Reúnan los siguientes objetos y rotúlenlos como corresponde: (1) libro, $10; (2) camisa, $15 y (3) portarretratos, $5.

Si un maestro quisiera comprar 10 libros, ¿cuánto costarían los libros? Si alguien quisiera comprar 3 camisas, ¿cuánto costarían las camisas? Si alguien quisiera comprar 2 portarretratos, ¿cuánto costarían los portarretratos?

Libros recomendados:

Anno’s Mysterious Multiplying Jar de Mitsumasa Anno

Amanda Bean’s Amazing Dream de Cindy Neuschwander

One Hundred Hungry Ants de Elinor Pinczes
# Anticipation Guide

## Multiply by Two-Digit Numbers

### Before you begin Chapter 8

- Read each statement.
- Decide whether you agree (A) or disagree (D) with the statement.
- Write A or D in the first column OR if you are not sure whether you agree or disagree, write NS (not sure).

### After you complete Chapter 8

- Reread each statement and complete the last column by entering an A (agree) or a D (disagree).
- Did any of your opinions about the statements change from the first column?
- For those statements that you mark with a D, use a separate sheet of paper to explain why you disagree. Use examples, if possible.

<table>
<thead>
<tr>
<th>STEP 1 A, D, or NS</th>
<th>Statement</th>
<th>STEP 2 A or D</th>

</tbody>
</table>
Chapter 8 Game

A Multiplication Race

You will need:
- Number cubes (2 per player)
- Paper and pencils

Give each player a pair of number cubes, a sheet of paper, and a pencil.

1. Each player tosses the pair of number cubes twice and forms two 2-digit numbers from the numbers tossed.
2. The player multiplies his or her numbers together and records the product.
3. Players follow steps 1 and 2 again, adding the products from the first and second round together.
4. Players repeat steps 1–3 until one reaches a sum of 10,000 and wins the game.
Find $355 \times 40$.

**Step 1**
Think in terms of hundreds, tens, and ones. $355 = 3\text{ hundreds} + 5\text{ tens} + 5\text{ ones}$.

**Step 2**
Multiply the ones.

$$
\begin{align*}
355 & \uparrow \\
\times 40 & \uparrow \\
\text{(any number)} & = 0 \\
0 & \\
\end{align*}
$$

**Step 3**
Multiply the tens $\times$ the ones.

$$
\begin{align*}
2 & \\
355 & \uparrow \\
\times 40 & \uparrow \\
4 \times 5\text{ ones} & = 20\text{ tens} \\
00 & \text{ Add the regrouped 2 tens.}
\end{align*}
$$

**Step 4**
Multiply the tens $\times$ the tens.

$$
\begin{align*}
22 & \\
355 & \uparrow \\
\times 40 & \uparrow \\
4 \times 5\text{ tens} & = 20\text{ tens} + 2\text{ tens} \\
200 & \text{ Add the regrouped 200.}
\end{align*}
$$

**Step 5**
Multiply the tens $\times$ the hundreds.

$$
\begin{align*}
22 & \\
355 & \uparrow \\
\times 40 & \uparrow \\
4 \times 3\text{ hundreds} & = 12\text{ hundreds} + 14,200\text{ 2 hundreds}
\end{align*}
$$

**Multiply.**

1. $44 \times 20 = \underline{880}$
2. $658 \times 30 = \underline{19,740}$
3. $57 \times 10 = \underline{570}$
4. $369 \times 50 = \underline{18,450}$
Skills Practice

Multiply by Tens

Multiply.

1. \(12 \times 30 = \underline{360}\)
2. \(21 \times 40 = \underline{840}\)
3. \(14 \times 60 = \underline{840}\)
4. \(31 \times 70 = \underline{2170}\)
5. \(25 \times 50 = \underline{1250}\)
6. \(24 \times 40 = \underline{960}\)
7. \(61 \times 30 = \underline{1830}\)
8. \(48 \times 20 = \underline{960}\)
9. \(19 \times 30 = \underline{570}\)
10. \(65 \times 40 = \underline{2600}\)
11. \(48 \times 40 = \underline{1920}\)
12. \(14 \times 50 = \underline{700}\)
13. \(49 \times 70 = \underline{3430}\)
14. \(42 \times 90 = \underline{3780}\)
15. \(80 \times 70 = \underline{5600}\)
16. \(26 \times 40 = \underline{1040}\)
17. \(17 \times 80 = \underline{1360}\)
18. \(135 \times 50 = \underline{6750}\)
19. \(207 \times 60 = \underline{12420}\)
20. \(399 \times 50 = \underline{19950}\)
21. \(756 \times 30 = \underline{22680}\)
22. \(375 \times 20 = \underline{7500}\)
23. \(409 \times 40 = \underline{16360}\)
24. \(490 \times 70 = \underline{34300}\)
25. \(967 \times 10 = \underline{9670}\)
26. \(975 \times 80 = \underline{78000}\)
27. \(549 \times 50 = \underline{27450}\)
28. \(105 \times 30 = \underline{3150}\)

Solve.

29. Classroom chairs cost $39. How much will it cost to buy 30 chairs?

\[39 \times 30 = 1170\]

30. A computer costs $986. How much will it cost to buy 20 computers?

\[986 \times 20 = 19720\]
Homework Practice

Multiply by Tens

Multiply.

1. \(51 \times 30 = \) ____________
2. \(712 \times 30 = \) ____________
3. \(39 \times 80 = \) ____________
4. \(116 \times 10 = \) ____________
5. \(67 \times 20 = \) ____________
6. \(185 \times 80 = \) ____________
7. \(325 \times 60 = \) ____________
8. \(490 \times 90 = \) ____________
9. \(608 \times 40 = \) ____________
10. \(111 \times 70 = \) ____________
11. \(999 \times 10 = \) ____________
12. \(740 \times 50 = \) ____________

Solve.

13. There are 40 rows of lockers. There are 12 lockers in each row.
   How many lockers are there? ____________

14. Pablo found out that every classroom has 34 desks. There are 30 classrooms. How many desks are in the school? ____________

Spiral Review

Multiply. (Lesson 7–7)

15. \(604 \times 3 = \) ____________
16. \(6,005 \times 8 = \) ____________
17. \(3,100 \times 9 = \) ____________

Solve.

18. Mr. Sims printed 303 museum trip notices for the students in each grade. The museum trip was for 3 grades. How many notices did he print? ____________

19. It costs $5 for each student to enter the museum. How much money did Mr. Sims need for 909 students to enter the museum? ____________

20. 600 students from another school joined the 909 students who were with Mr. Sims. The museum provided a study guide for each student. The study guides cost the museum $2 each to print. How much did it cost the museum to provide study guides for all of the students? ____________
Solve.

1. Teams of 16 students are helping the town clean the park. There are 20 teams in all. How many students are cleaning the park?

2. Students are going on a field trip in 10 buses. Each bus carries 35 students. How many students can go on the field trip?

3. Mr. Parker arranged 1 van for every 12 students to travel to the zoo. A total of 40 vans were needed. How many students went on the trip?

4. It cost $14 to buy tickets for each student to go to the petting zoo. Mr. Parker bought tickets for 30 students. How much did the tickets cost?

5. The 32 caretakers make sure that all of the animals are checked on each day at the zoo. How many animals are at the zoo if each caretaker checks on 30 animals?

6. 27 students run in a charity race to raise money for the zoo. Thirteen of the students each raise $20. The rest of the students each raise $30. How much did the students raise in all?
One multiplication problem appears in each four-square below. Find its product. Then fill up the four-square by writing three more problems that have the same product. Use as many multiples of ten as you can.

\[ 30 \times 500 = \]
\[ 90 \times 6,000 = \]
\[ 350 \times 70 = \]
\[ 64 \times 800 = \]
Reteach

Estimate Products

You can round to estimate products. Round each factor to its greatest place. Then multiply using patterns with zeros.

Estimate 42 × 59.

42 → 40 1 zero
× 59 → × 60 × 1 zero
2,400 2 zeros

Estimate 74 × 229.

229 → 200 2 zeros
× 74 → × 70 × 1 zero
14,000 3 zeros

Estimate each product by rounding.

1. 54 →
   × 19 →

2. $29 →$
   × 32 →

3. 788 →
   × 51 →

Estimate each product.

4. 37 × 49
5. 23 × 51
6. 69 × 19
7. 26 × $72$
8. 19 × 315
9. 85 × 263
10. 72 × 803
11. 48 × 156
12. 92 × 228
Skills Practice

Estimate Products

Estimate each product.

1. $49 \times 59$ ________
2. $85 \times 211$ ________
3. $55 \times 65$ ________
4. $71 \times 218$ ________
5. $41 \times 52$ ________
6. $19 \times 602$ ________
7. $18 \times 29$ ________
8. $29 \times 907$ ________
9. $98 \times 402$ ________
10. $82 \times 310$ ________
11. $71 \times 874$ ________
12. $37 \times 196$ ________
13. $61 \times $216 ________
14. $42 \times 284$ ________
15. $81 \times 350$ ________
16. $480 \times 16$ ________
17. $42 \times 605$ ________
18. $230 \times 21$ ________
19. $23 \times 999$ ________
20. $890 \times 36$ ________

Solve by estimating each product.

21. The price of a bus ticket is $58. About how much will tickets cost for a group of 62 passengers? ________________

22. An airline ticket costs $375. About how much will tickets cost for a group of 25 people? ________________

23. Michael averages 12 points in each football game. About how many points will he score in 12 games? ________________

24. Rachel creates 14 paintings a month. About how many paintings will she create in 2 years? ________________
Estimate each product.

1. $37 \times 22$
2. $878 \times 41$
3. $49 \times 16$
4. $250 \times 12$
5. $68 \times 22$
6. $688 \times 19$
7. $36 \times 81$
8. $563 \times 29$
9. $714 \times 11$
10. $141 \times 78$

Estimate to solve.

11. The price of a bus ticket is $39. About how much will tickets cost for a group of 58 passengers?

12. An airline ticket costs $285. About how much will tickets cost for a group of 37 people?

Multiply. (Lesson 8–1)

13. $35 \times 10$
14. $723 \times 20$
15. $58 \times 40$
16. $448 \times 40$
17. $89 \times 30$
18. $58 \times 60$
19. $54 \times 80$
20. $98 \times 80$
21. $43 \times 40$
22. $51 \times 50$
23. $45 \times 80$
24. $663 \times 30$
25. $99 \times 90$
26. $39 \times 70$
27. $75 \times 50$
28. $87 \times 20$
29. $658 \times 50$
30. $52 \times 60$
Solve.

1. Each of 32 classrooms has 4 computers. About how many computers are there in all?

2. A new keyboard for the computer costs $49. The school is buying 18 keyboards. About how much will they cost?

3. There are 42 times for students to work in the computer lab during one week. If 19 students can work in the computer lab at one time, about how many students can work in the computer lab during one week?

4. The school is buying 28 new computers for the computer lab. One computer costs $812. About how much will all of the computers cost?

5. The school district is buying laser printers for 62 schools. Each printer costs $898. About how much will all the printers cost?

6. The school district is buying software for virus protection. Each software package costs $48. There are 685 computers all together in the district’s schools. About how much will the software cost?
Rounding is a good way to estimate products when you don’t need a precise answer. First estimate these products and use > or < to show which package weighs more. Then multiply to check your answers.

**Solve. Use the *act it out* strategy.**

1. Rod has 20 coins having the value of $6. What coins does he have?

2. List 3 combinations to create a value of 64 cents.

3. Angie is 8 years old. She is one-fifth her father’s age. How old is her father?
4. You decide to start a business making T-shirts with Joe, Frank, and Eddie. In one day Joe created 6 more than Frank. Frank created 4 less than Eddie. On that day, the total number of T-shirts the boys created was 22. How many shirts did each boy create?

5. The boys have $100 to spend. They have a total of four bills. They are either $5, $10, $20, or $50 bills. What combination of bills do they have?

6. There are 10 people interested in buying shirts. All 10 people unfold and inspect the 22 shirts. After each person unfolds a shirt, Frank folded it again. How many times did Frank refold shirts?

7. After selling shirts, the boys had $500 in cash. They had a total of 19 bills. What combination of bills do they have?

8. Eddie figured out that he could cut a large square of fabric into 4 small squares, and each small square was enough for 1 T-shirt. In the end, the boys ruined 2 shirts and had 22 good ones. How many large squares of fabric did they start with?

9. Leah is 13 years older than Jillian. Jillian is 2 years younger than Steve. If Steve is 11, how old is Leah?
Solve. Use the act it out strategy.

1. Ann is 50. Ann is twice the age of her daughter, Cindy. Cindy’s daughter is 20 years younger than her mother. How old is Cindy’s daughter?

2. Jane is 64 years old and 4 years older than 3 times Linda’s age. How old is Linda?

3. Jerry has 12 bills equaling $100. ($5, $10, $20, $50) What combination of bills does he have?

4. Fred has 34 coins equaling $3. What combination of coins does he have?

5. The Gomez family goes to a symphony concert. They buy 1 adult ticket at $15.75 and 3 youth tickets at $9.98. How much does the Gomez family spend for tickets?

6. There are 30 students in the lunch line. On the shelf there are an equal number of 5 different kinds of drinks. If there are 30 drinks on the shelf, how many people will have the same kind of drink?
**8–3**

**Homework Practice**

**Problem-Solving Strategy**

Solve. Use the act it out strategy.

1. The Diving Club offers 4 beginning diving classes each day. Each class has room for 6 people. How many people can take classes in 30 days? 

2. A fishing guide charges $25 per hour. He works 6 hours per day for 5 days. How much money does the guide earn? 

3. During one week, 5 sailboats are rented for a total of 16 hours each. The rental cost is $25 per hour. Altogether, how much is paid for these rentals? 

4. The aquarium charges $12 admission and $6 for a tour. A group of 20 people goes to the aquarium and takes the tour. How much money does the group spend? 

5. Amanda rents a canoe and a life preserver from 2:00 P.M. to 5:00 P.M. A canoe costs $12 per hour. A life preserver costs $2 per hour. How much does Amanda spend? 

6. Jenny rented a rowboat for 2 hours in the morning. After lunch, she rented another rowboat for 3 hours. For how many minutes did she rent the boat?

Trade with a partner to check each other’s work.
Find $36 \times 26$.
Estimate: $40 \times 30 = 1,200$

Step 1 Multiply the ones. Regroup if necessary. Cross out the amount you regroup when you add it.

\[
\begin{array}{c}
3 \\
3 \\
6 \\
\times \\
2 \\
6 \\
\hline
2 \\
1 \\
6 \\
\end{array}
\]

Step 2 Multiply the tens. Regroup if necessary. Cross out the amount you regroup when you add it. Remember, a zero is in the ones place when you multiply the tens.

\[
\begin{array}{c}
1 \\
3 \\
6 \\
\times \\
2 \\
6 \\
\hline
2 \\
1 \\
6 \\
6 \times 3 \\
6 \\
7 \\
2 \\
0 \\
\end{array}
\]

Step 3 Add.

\[
\begin{array}{c}
1 \\
3 \\
6 \\
\times \\
2 \\
6 \\
\hline
2 \\
1 \\
6 \\
6 \times 3 \\
6 \\
7 \\
2 \\
0 \\
\end{array}
\]

Solve.

1. Each art class uses 231 pipe cleaners for a project. How many pipe cleaners will 15 classes use? Multiply. Check that the answer is reasonable.

3. Each week, 989 cars drive through the wildlife park. How many cars drive through the park in 24 weeks? Multiply. Check that the answer is reasonable.

4. A classroom set of books about space exploration costs $234. There are 16 classes. How much will books for all of the classes cost? Multiply. Check that the answer is reasonable.

5. The tile crew can lay 878 tiles in one day. How many tiles can the crew lay in 62 days? Multiply. Check that the answer is reasonable.

6. There are 981 floor tiles in one classroom in the school. How many floor tiles will it take to replace the tiles in 28 classrooms? Multiply. Check that the answer is reasonable.
Fill in the missing digits in the multiplication problems below.

1. \[83 \times 42 = 1674\]  
   \[338\]  
   \[3514\]

2. \[62 \times 38 = 5376\]  
   \[201\]  
   \[2536\]

3. \[14 \times 5 = 5484\]  
   \[4570\]  
   \[5184\]

4. \[55 \times 71 = 3675\]  
   \[3775\]

5. \[46 \times 7 = 2430\]  
   \[302\]  
   \[36450\]

6. \[95 \times 8 = 790\]  
   \[1160\]
Mandy went shopping. Her mother gave her a bank card to use and told her that she could not spend more than $200. Mandy spent $56 in the first store, $87 in the next, then $95, and finally $103. When she got home, Mandy told her mother that she wasn’t sure but thought she stayed under $200. Does this make mathematical sense?

Understand

Be sure you understand the problem.

What do you know?

• Mandy has a limit of $200.
• She spent $56, $87, $95, and $103.

What do you need to find?

• You need to find if Mandy stayed within her limit.

Plan

Make a plan.

You can use the make a table strategy to find how much Mandy spent. You can estimate the amount Mandy spent at each store and place the amounts in the table.

<table>
<thead>
<tr>
<th>Store #1</th>
<th>Store #2</th>
<th>Store #3</th>
<th>Store #4</th>
</tr>
</thead>
<tbody>
<tr>
<td>$56</td>
<td>$87</td>
<td>$95</td>
<td>$103</td>
</tr>
</tbody>
</table>

Solve

$56 + $87 + $95 + $103 = $341

$341 − $200 = $141

So, Mandy spent $141 over her $200 limit.

Check

Is the solution reasonable?

Reread the problem.

Check your answer.

Solve and tell what strategies you used.

1. Sandy spent $459 on gifts. She spent about $50 on each person. How many people did she buy gifts for?
Reteach (continued)

Problem-Solving Investigation

2. Caitlin, Erin, and Jeannie are on the track team. Over the season, Caitlin won 2 times and came in second 2 times. Erin won 1 time and came in second 5 times. Jeannie did not win at all, but came in second 8 times. The runners earn 10 points for winning and 5 points for coming in second. Who got the most points this season?

3. Kyle is 4,000 days old. About how many years old is he?

4. Hao solved the following problem. 42 × 37 = 1,554
   Explain how Hao could check his answer.

5. At a store, jeans are on sale for $32 and sweaters are on sale for $28. How much will it cost Mrs. Jackson to buy 3 pairs of jeans and 4 sweaters for her children?

6. Carmen bought 5 dozen muffins for her class. Each student got 2 muffins. Estimate how many people are in Carmen’s class and explain your answer.

7. Every teacher at Mountain Elementary is provided 800 sheets of paper. How many sheets of paper do the 50 teachers have altogether?

8. Isra is thinking of two numbers that have a sum of 7 and a product of 10. What are the two numbers? ____________________

15. $823 \times 69 = $________
Napier’s Bones

In the 17th century, John Napier invented a simple calculator that multiplied by adding. Use Napier’s Bones to find $49 \times 37$.

1. Cut out the ten strips below. Place the 4, 9, and index strips next to each other.
2. Fold the strips so that rows 3 and 7 of the index are next to each other. See how the diagonal lines form a pattern of diagonal columns.
3. To find the product, add the numbers along the diagonal columns starting from the bottom right. The first diagonal (3) is the ones digit. The next diagonal ($7 + 6 + 8 = 21$) is the tens. Write 1 under the tens column and regroup 2 to the next diagonal. Add the next diagonal, $2 + 2 + 2 + 2 = 8$, for the hundreds. The last diagonal (1) is the thousands. So, the product of $49 \times 37$ is 1,813.

Use the strips to find each product.

1. $57 \times 34 = \underline{\hspace{1cm}}$
2. $61 \times 76 = \underline{\hspace{1cm}}$
3. $85 \times 29 = \underline{\hspace{1cm}}$
4. $32 \times 33 = \underline{\hspace{1cm}}$
5. $94 \times 65 = \underline{\hspace{1cm}}$
6. $56 \times 48 = \underline{\hspace{1cm}}$
Find 4,263 × 43.
Estimate: 4,000 × 40 = 160,000

**Step 1** Multiply the ones. Regroup if necessary. Cross out the amount you regroup when you add it.

\[
\begin{array}{c}
1 \\
4,263 \\
\times 43 \\
\hline
12,789 \\
\end{array}
\]

**Step 2** Multiply the tens. Remember, a zero is in the ones place when you multiply the tens.

\[
\begin{array}{c}
121 \\
1 \\
4,263 \\
\times 43 \\
\hline
12,789 \\
\end{array}
\]

Step 3 Add.

\[
\begin{array}{c}
121 \\
1 \\
4,263 \\
\times 43 \\
\hline
12,789 \\
\end{array}
\]

\[

</table>

13. Antonio runs 2 miles a day. In one mile there is 5,280 feet. How many feet does he run in 2 weeks? _________

14. If a panda bear eats 84 pounds of fresh bamboo sprouts every day, how many pounds of bamboo do 12 pandas eat in two weeks? _________

15. There are 2,734 miles between Seattle, Washington and Miami, Florida. If Consuelo travels round trip from Miami to Seattle 6 times, how many miles does she travel altogether? _________

### Spiral Review

#### Solve. (Lesson 8–6)

16. Brady is counting the money in his piggy bank. He has $0.56. He has 3 kinds of coins and 8 coins in all. What coins does he have? _________

17. Sara is thinking of two numbers that have a sum of 15 and a product of 56. What are the two numbers? _________

18. Marc has 15 trophies. Four of the trophies are for track. He has two times as many swimming trophies as track trophies. The rest of the trophies are for soccer. How many soccer trophies does he have? _________
Solve.

1. Jamie travels 3,056 miles each year. How many miles does Jamie travel in 15 years?

2. Fourteen members of the crafts club are making necklaces. It takes 202 beads to make each necklace. How many beads will they need if they each make 5 necklaces?

3. An elephant weighs 13,500 pounds. How much would 25 elephants the same size weigh all together?

4. Jason is taking a bus to visit his grandparents. The bus trip is 113 miles each way. How many miles will Jason travel to and from his grandparents’ house? Write the multiplication sentence and solve.

5. Jack is a pilot for a large airline. He plans on retiring in 11 years. Every week, he follows the same schedule of flights. He knows that he flies 78,434 miles each year. How many miles will he fly before he retires?

6. The city parks commission wants to build a new park. The model has 6 tennis courts. Each tennis court will cost $92,378. The city does not want to pay more than $550,000 for all 6 courts. How much will the tennis courts cost? Will the city be able to build all of them?
Enrich

Eight Million or More

Using the digits 3, 4, 5, 6, 7, 8, and 9, write at least 5 multiplication problems with a product of eight million or more. You may not use the same digit more than once in the same problem. Multiply to check your answers.

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

Using the same digits (3, 4, 5, 6, 7, 8, and 9), write at least 5 numbers that round to six million. Round to check your answers.

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

Now, create a problem for a partner.

Choose seven digits. ___ ___ ___ ___ ___ ___ ___

Create a question. For example, write at least 5 addition problems with a sum less than four million.

________________________________________________________________________

Trade with a partner, and complete each other’s problems.

Chapter Diagnostic Assessment

Round to the given place.

1. 504; nearest ten

2. 3,244; nearest hundred

3. 78,990; nearest ten thousand

4. 967,021; nearest thousand

Add.

5. \(873 + 455 = n\)

6. \(3,569 + 989 = n\)

7. \(13,402 + 34,209 = n\)

8. \(518,667 + 253,012 = n\)

Multiply.

9. \(3 \times 6\)

10. \(5 \times 7\)

11. \(20 \times 6\)

12. \(67 \times 4\)

13. \(30 \times 8\)

14. \(43 \times 3\)
Chapter Pretest

Multiply.
1. \(97 \times 80\)
2. \(12 \times 35\)
3. \(21 \times 18\)
4. \(48 \times 30\)
5. \(61 \times 48\)
6. \(60 \times 27\)
7. \(10 \times 63\)
8. \(5,621 \times 13\)

Estimate each product using rounding.
9. \(68,879 \times 22\)
10. \(932 \times 28\)
11. \(79,997 \times 12\)
12. \(11,111 \times 56\)

Solve. Check for reasonableness.
13. In Oaxaca, the fifth largest state in Mexico, about 97 people live in each square mile. The area of Oaxaca is about 36,829 square miles. Estimate how many people live in Oaxaca.

14. The average teacher in California makes $53,870 per year. About how much money is paid in salaries at a school with 36 teachers?

15. A dragonfly can fly 36 miles an hour. If a dragonfly flew for 5 days straight, how many miles would it have traveled?

16. Savannah writes 30 pages in her journal every week. How many pages does she write in a year?
Multiply.

1. \[16 \times 30\]
2. \[70 \times 70\]
3. \[\$563 \times 40\]
4. \[33 \times 60\]
5. \[\$123 \times 20\]

Estimate. Tell whether the estimate is greater or less than the actual product.

6. \[\$67 \times 15\]
7. \[\$671 \times 29\]
8. \[42 \times 34\]
9. \[89 \times 65\]

10. Sam’s heart beats 83 times a minute. About how many times does his heart beat in an hour?
Multiply.

1. \(23 \times 18\)
2. \(\$36 \times 36\)
3. \(\$81 \times 48\)
4. \(11 \times 44\)
5. \(47 \times 63\)
6. \(\$64 \times 19\)

Solve.

7. Marisol buys a snack that costs 85 cents. She pays with 7 coins. What coins does she use?

8. Lilly, Amma, and Joy are standing in line. How many ways can they line up in a different order?

9. Four students measure their heights. Randy is shorter than Tessa but taller than Will. Will is taller than Ko, but shorter than Tessa. Arrange the students in order from shortest to tallest.

10. Jody has \$1.40 in her purse. She has three times as many dimes as nickels. What is the largest number of dimes Jody could have?
Multiply.

1. \[164 \times 33\]
2. \[555 \times 99\]
3. \[15,717 \times 23\]
4. \[6,412 \times 58\]
5. \[20,341 \times 33\]
6. \[\$456 \times 42\]
7. \[\$3,001 \times 29\]

Solve.

8. Earl blinks 20 times a minute. How many times does he blink in an hour?

9. Yolanda wants to buy a shirt that costs $21.95 and a hat that costs $15.82. If she has $30, how much more money does she need?

10. Omar is thinking of two numbers that have a sum of 28 and a product of 160. What are the two numbers?
Mid-Chapter Review  (Lessons 8-1 through 8-4)

Multiply.

1. $78 \times 30$
   
   A. 234  
   B. 108  
   C. 2,340  
   D. 2,440  
   1. _________

2. $45 \times 71$
   
   F. $360$  
   G. $3,295$  
   H. $3,095$  
   J. $3,195$  
   2. _________

3. $46 \times 32$
   
   A. 1,472  
   B. 1,473  
   C. 1,571  
   D. 1,572  
   3. _________

4. $83 \times 83$
   
   F. $6,889$  
   G. $6,888$  
   H. $5,889$  
   J. $1,444$  
   4. _________

5. $322 \times 40$
   
   A. 1,288  
   B. 1,298  
   C. 12,880  
   D. 12,980  
   5. _________

Estimate. Tell whether the estimate is greater or less than the actual product.

6. $62 \times 54$
   
   6. _________

7. $181 \times 46$
   
   7. _________

8. $76 \times 25$
   
   8. _________

Solve.

9. Wade has 72 cents. He does not have any half-dollar coins. Find the least possible number of coins that Wade has.  
   9. _________

10. Kira is 10 years old. Kira’s sister Rochelle is 13 years younger than 3 times Kira’s age. How old is Rochelle?  
    10. _________
Match each word to its definition. Write your answers on the lines provided.

1. Distributive Property of Multiplication _____
   A. The answer to a multiplication problem.

2. estimate _____
   B. To change the value of a number to one that is easier to work with. To find the nearest value of a number based on a given place value.

3. multiplication _____
   C. The numbers 0, 1, 2, 3, and 4.

4. product _____
   D. The property that states that to multiply a sum by a number, you can multiply each addend by the same number and add the products.

5. round _____
   E. A number close to an exact value.

6. whole number _____
   F. An operation on two numbers to find their product. It can be thought of as repeated addition.
For this activity you will need 30 counting blocks. Put 10 blocks in a row to make a line of blocks.

**Read each question aloud to the student. Then write the student’s answers on the lines below the question.**

1. How many blocks are in the row?

   __________________________________________________________

2. If you multiplied the number of blocks by 2, how many blocks would you have?

   __________________________________________________________

3. Tell how you got your answer.

   __________________________________________________________

4. If you stacked 10 more blocks on top, how many blocks would there be?

   __________________________________________________________

5. If you divided those 30 blocks in half, how many blocks would be in each group?

   __________________________________________________________

6. Instead of stacking the blocks in groups of ten, how could you stack them in even rows?

   __________________________________________________________
7. Explain your answer.

<table>
<thead>
<tr>
<th>Average Amount of Foods Eaten by a Person Each Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sandwiches</td>
</tr>
<tr>
<td>Chips</td>
</tr>
</tbody>
</table>

Use the chart above to answer the following questions:

8. How many orders of chips would a person eat over 3 years?

9. Prove your answer.

10. What is the rounded amount of sandwiches a person eats in a year?

11. Tell how you got your answer.

12. About how many sandwiches would a person eat over 10 years?

13. Explain your answer.
# Chapter Project Rubric

Chapter Test Form 1

Read each question carefully. Write your answer on the line provided.

1. \[ 500 \times 60 \]
   A. 300         B. 3,000
   C. 30,000      D. 300,000

2. \[ 40 \times 57 = \]
   F. 228         G. 2,028
   H. 2,280       J. 20,280

3. \[ 31 \times 47 = \]
   A. 1,247       B. 1,257
   C. 1,447       D. 1,457

4. \[ 7000 \times 20 \]
   F. 140         G. 1,400
   H. 14,000      J. 140,000

5. \[ 40 \times 357 = \]
   A. 1,428       B. 1,208
   C. 12,080      D. 14,280

6. \[ 38 \times 72 = \]
   F. 2,736       G. 2,763
   H. 2,836       J. 2,063

7. \[ 30 \times 6,000 = \]
   A. 180         B. 1,800
   C. 18,000      D. 180,000

8. \[ 1,482 \times 30 \]
   F. 4,460       G. 44,400
   H. 44,460      J. 46,460

9. \[ 62 \times 28 = \]
   A. 1,730       B. 1,736
   C. 1,763       D. 17,360

10. \[ 80 \times 4,000 = \]
    F. 320,000     G. 32,000
    H. 3,200      J. 320

11. \[ 2,489 \times 70 = \]
    A. 172,340     B. 173,420
    C. 174,230     D. 174,320

Grade 4  55
Chapter Test Form 1  (continued)

12. $37 \times 84 = \square$

13. $50 \times 3,000 = \square$
   A. 1,500  B. 15,000  C. 150,000

14. $60 \times 56 = \square$
   F. 3,030  G. 3,036  H. 3,063  J. 3,360

15. $29 \times 67 = \square$
   A. 1,943  B. 1,893  C. 1,493  D. 1,439

16. There are 4 tennis balls in a can. There are 4 cans in a stack and 6 stacks in a case. Each can is $3. How much is a case?
   F. $72  G. $96  H. $105  J. $288

17. A warehouse received its first shipment of 11,350 shirts. Then it sent out two shipments of 3,240 shirts each. It then received 4,250 shirts. How many shirts are in the warehouse now?
   A. 3,860 shirts  B. 9,120 shirts  C. 12,360 shirts  D. 18,840 shirts

18. 34 buses set out together on a trip from New York to Montreal. Each bus held 48 people. How many people took the trip from New York to Montreal?
   F. 1,632 people  G. 1,432 people  H. 1,302 people  J. 1,236 people

19. A volunteer can gather 84 signatures per day for an environmental campaign. How many signatures can 25 volunteers gather per day?
   A. 2,010 signatures  B. 2,100 signatures  C. 2,200 signatures  D. 20,100 signatures

20. Tickets to a concert cost $18 for adults and $12 for senior citizens. How much will it cost for 22 adults and 34 senior citizens to buy tickets to the concert?
   F. $408  G. $612  H. $804  J. $1,680
Chapter Test Form 2A

Read each question carefully. Write your answer on the line provided.

1. $600 \times 40 = \boxed{24,000}$
   - A. 240
   - B. 24,000
   - C. 240,000
   - D. 2,400,000

2. $30 \times 67 = \boxed{2,010}$
   - F. 21,000
   - G. 20,010
   - H. 2,110
   - J. 2,010

3. $21 \times 37 = \boxed{777}$
   - A. 477
   - B. 677
   - C. 754
   - D. 777

4. $9,000 \times 40 = \boxed{360,000}$
   - F. 360
   - G. 36,000
   - H. 360,000
   - J. 3,600,000

5. $60 \times 253 = \boxed{15,180}$
   - A. 16,000
   - B. 15,180
   - C. 1,580
   - D. 1,200

6. $41 \times 63 = \boxed{2,583}$
   - F. 258
   - G. 2,500
   - H. 2,583
   - J. 25,803

7. $20 \times 5,000 = \boxed{100,000}$
   - A. 100
   - B. 1,000
   - C. 10,000
   - D. 100,000

8. $2,892 \times 60 = \boxed{173,520}$
   - F. 173,520
   - G. 17,520
   - H. 1,752
   - J. 173

9. $34 \times 58 = \boxed{1,972}$
   - A. 197
   - B. 1,279
   - C. 1,792
   - D. 1,972

10. $40 \times 7,000 = \boxed{280,000}$
    - F. 280,000
    - G. 210,000
    - H. 24,000
    - J. 2,800

11. $3,335 \times 80 = \boxed{266,800}$
    - A. 268
    - B. 26,800
    - C. 240,000
    - D. 266,800
12. $47 \times 94 = \square$
   \text{F. 418} \quad \text{G. 4,418} \quad \text{H. 44,018} \quad \text{J. 367,000} \quad 12. \quad \square$

13. $40 \times 3,000 = \square$
   \text{A. 120} \quad \text{B. 1,200} \quad \text{C. 12,000} \quad \text{D. 120,000} \quad 13. \quad \square$

14. $20 \times 84 = \square$

15. $27 \times 29 = \square$
   \text{A. 783} \quad \text{B. 773} \quad \text{C. 489} \quad \text{D. 56} \quad 15. \quad \square$

16. There are 6 cans of juice in a pack. There are 6 packs in a stack and 8 stacks in a case. How many cans of juice are in a case?
   \text{F. 2,888} \quad \text{H. 120} \quad \text{G. 288} \quad \text{J. 44} \quad 16. \quad \square$

17. Shawn had 48 marbles. He gave 10 to his little brother, then bought 15 more. Later, his friend gave him twice the amount he first had. How many marbles does he have now?
   \text{A. 149} \quad \text{B. 146} \quad \text{C. 116} \quad \text{D. 115} \quad 17. \quad \square$

18. A warehouse received its first shipment of 5,677 backpacks. Then it sent out two shipments of 1,444 each. It then received 3,230 backpacks. How many backpacks are in the warehouse now?
   \text{F. 61,019} \quad \text{G. 10,351} \quad \text{H. 6,019} \quad \text{J. 619} \quad 18. \quad \square$

19. A volunteer can gather 78 signatures per day for a recreation center petition. How many signatures can 35 volunteers gather per day?
   \text{A. 270} \quad \text{B. 377} \quad \text{C. 2,730} \quad \text{D. 27,030} \quad 19. \quad \square$

20. Movie tickets are $8 for adults and $5 for children. How much will it cost for 12 adults and 10 children to buy movie tickets?
   \text{F. $96} \quad \text{G. $100} \quad \text{H. $146} \quad \text{J. $156} \quad 20. \quad \square
Chapter Test Form 2B

Read each question carefully. Write your answer on the line provided.

1. $300 \times 70 = $
   A. 210,000  B. 21,000  C. 2,100  D. 210  1. ___

2. $40 \times 68 = $
   F. 27,200  G. 2,620  H. 2,720  J. 272  2. ___

3. $49 \times 75 = $
   A. 3,675  B. 3,775  C. 1,225  D. 124  3. ___

4. $200 \times 60 = $
   F. 120,000  G. 12,000  H. 1,200  J. 120  4. ___

5. $70 \times 327 = $
   A. 228,900  B. 22,890  C. 2,289  D. 397  5. ___

6. $47 \times 85 = $
   F. 132  G. 376  H. 3,760  J. 3,995  6. ___

7. $30 \times 8,000 = $
   A. 2,400  B. 24,000  C. 240,000  D. 2,400,000  7. ___

8. $5,034 \times 20 = $
   F. 100,680  G. 100,680  H. 10,680  J. 5,054  8. ___

9. $28 \times 62 = $
   A. 17,360  B. 1,836  C. 1,736  D. 224  9. ___

10. $70 \times 8,000 = $
    F. 560,000  G. 480,000  H. 56,000  J. 8,070  10. ___

11. $30 \times 8,000 = $
    A. 2,400  B. 24,000  C. 240,000  D. 2,400,000  11. ___

12. $2,228 \times 90 = $
    F. 2,520  G. 20,052  H. 20,520  J. 200,520  12. ___
13. $50 \times 6,000 = \square$
   A. 300,000       B. 30,000       C. 3,000       D. 300
14. $50 \times 72 = \square$
   F. 360,000       G. 36,000       H. 3,600       J. 360
15. $48 \times 59 = \square$
   A. 2,832         B. 2,932         C. 28,320       D. 2,830
   16. There are 12 ink pens in a pack. There are 3 packs in a stack and 12 stacks in a case. How many ink pens are in a case?
      F. 442         G. 432         H. 147         J. 27
17. $48 \times 59 = \square$
   A. 2,830         B. 2,832         C. 2,932         D. 28,320
   18. Min had 96 beads. She gave 20 to her little sister, then bought 25 more. Later, her friend gave her twice the amount she first had. How many beads does she have now?
      F. 333         G. 293         H. 217         J. 197
19. Shawnda’s mom can make 23 pints of applesauce in one day. How many pints of apple sauce can she make in 3 days?
   A. 79         B. 69         C. 46         D. 26
20. Tickets for the zoo are $10 for adults and $4 for children. How much will it cost for 3 adults and 2 children to buy zoo tickets?
   F. $50         G. $38         H. $32         J. $28
Chapter Test Form 2C

Read each question carefully. Fill in the correct answer in the space provided.

1. \(700 \times 50 = \)

2. \(30 \times 56 = \)

3. There are 8 boxes of juice in a pack. There are 6 packs in a stack and 10 stacks in a case. How many boxes of juice are in a case?

4. Chloe had 56 stickers. She gave 8 to her little brother, then bought 15 more. Later, her friend gave her twice the amount she first had. How many stickers does she have now?

5. \(43 \times 66 = \)

6. \(6,000 \times 30 = \)

7. \(60 \times 451 = \)

8. \(41 \times 92 = \)

9. \(20 \times 8,000 = \)

10. \(3,241 \times 60 = \)
11. $34 \times 71 = \quad 11. \underline{\text{_______}}$

12. $40 \times 9,000 = \quad 12. \underline{\text{_______}}$

13. A warehouse received its first shipment of 5,214 calculators. Then it sent out two shipments of 1,892 each. It then received 6,214 calculators. How many calculators are in the warehouse now? 13. \underline{\text{_______}}

14. $4,449 \times 80 = \quad 14. \underline{\text{_______}}$

15. $47 \times 62 = \quad 15. \underline{\text{_______}}$

16. $90 \times 3,000 = \quad 16. \underline{\text{_______}}$

17. $20 \times 79 = \quad 17. \underline{\text{_______}}$

18. $27 \times 35 = \quad 18. \underline{\text{_______}}$

19. Mia can make 31 baskets in one month. How many baskets can she make in 6 months? 19. \underline{\text{_______}}

20. Aquarium tickets are $12 for adults and $4 for children. How much will it cost for 4 adults and 3 children to buy aquarium tickets? 20. \underline{\text{_______}}
Chapter Test Form 2D

Read each question carefully. Fill in the correct answer in the space provided.

1. \(500 \times 40 = \)  

2. \(20 \times 67 = \)  

3. There are 16 markers in a pack. There are 10 packs in a stack and 12 stacks in a case. How many markers are in a case?

4. Jose had 36 baseball cards. He gave 10 to his little brother. Then he bought 22 more. Then, his friend gave him twice the amount he first had. How many baseball cards does he have now?

5. \(21 \times 58 = \)  

6. \(4,000 \times 40 = \)  

7. \(60 \times 461 = \)  

8. \(39 \times 63 = \)  

9. \(50 \times 5,000 = \)  

10. \(6,102 \times 60 = \)
11. $67 \times 58 =$

12. $60 \times 7,000 =$

13. A warehouse received 3,813 books. Then it sent out two shipments of 895 each. It then received 2,108 books. How many books are in the warehouse now?

14. $4,176 \times 60 =$

15. $58 \times 94 =$

16. $40 \times 5,000 =$

17. $50 \times 84 =$

18. $42 \times 29 =$

19. Miguel can pick 18 apples in 10 minutes. How many apples can he pick in 1 hour?

20. Museum tickets are $7 for adults and $5 for children. How much will it cost for 6 adults and 5 children to buy museum tickets?
Chapter Test Form 3

Read each question carefully. Fill in the correct answer in the space provided.

1. Computer monitors cost $219. How much will it cost to buy 20 monitors?

For Exercises 2-4, estimate each product.

2. $5,198 \times 50 =

3. $6,930 \times 12 =

4. $7,190 \times 68 =

5. The price of a plane ticket is about $398. About how much will tickets cost for 4 adults to fly?

6. Mario is 7 years older than Nate. Nate is 2 years younger than Rose. If Rose is 9 years old, how old is Mario?

7. Carl has 6 bills equaling $100. (5, 10, 20) What combination of bills does he have?

Multiply.

8. $41 \times 12 =

9. $34 \times 56 =

10. $425 \times 35 =

11. $382 \times 26 =

12. $3,705 \times 47 =

13. $31,802 \times 52 =

14. $17,825 \times 33 =
15. The math department bought 14 graphing calculators for $89 each. How much did the math department spend on graphing calculators?  

16. A kids meal costs $3. How much would 26 kids meals cost? 

17. Participants paid $20 to enter a charity walk. How much money was collected from 529 participants? 

18. The principal bought 23 boxes of stickers. Each box held 625 stickers. How many stickers did she buy in all? 

19. Nicole runs 24 miles a month. In one mile there is 1,760 yards. How many yards does she run in one year? 

20. An elephant can eat 400 pounds of food every day. How many pounds of food do 5 elephants eat in one week?
1. Identify the multiplication problem that does not belong with the other three. Explain.

\[39 \times 20\]
\[21 \times 20\]
\[13 \times 20\]
\[69 \times 20\]

2. What word in a problem gives you the hint to estimate?

\[\text{a. How do you estimate a product?}\]

3. Solve the following problem using the Act it Out strategy.

Sonya has 5 coins in her pocket. The coins equal $0.75. What combination of coins does she have in her pocket?
Use this recording sheet with pages 332–333 of the Student Edition. Read each question. Then fill in the correct answer.

1. A B C D

2. F G H J

3. A B C D

4. F G H J

5. A B C D

6. F G H J

7. A B C D

8. F G H J

9. A B C D
Test Example

Domingo washed 64 cars over the summer. He charged $12 a car. How much money did he earn over the summer?

A. $786  B. $768  C. $868  D. $912

Read the Question
You need to multiply 64 by $12 to find the amount of money earned.

Solve the Question

Step 1 Multiply the ones.

\[
\begin{array}{c}
1 \\
64 \\
\times 12 \\
\hline
128 + (2 \times 64)
\end{array}
\]

Step 2 Multiply the tens.

Then add the partial products.

\[
\begin{array}{c}
1 \\
64 \\
\times 12 \\
\hline
128 + (2 \times 64) \\
+ 640 + (10 \times 64) \\
\hline
768 + (2 \times 64) + (10 \times 64)
\end{array}
\]

So, Domingo earned $768.
The answer is B.

Read each question. Then write your answer on the line provided.

1. Sylvia planted 8 rows of tomato plants. Each row had 12 tomato plants. How many tomato plants will she have in all?

A. 64  B. 96  C. 106  D. 144

2. What number makes this equation true?

\[40 \times \underline{\text{ }} = 360\]

F. 9  G. 12  H. 320  J. 350
Cumulative Standardized Test Practice (continued)

3. To raise money for new sports equipment, 56 students walked 15 miles each week for the month of September. How many total miles did they walk in September?
   A. 71     B. 840     C. 1,300     D. 3,360

4. Jamal reads 36 pages in his textbook each day for 14 days. How many pages did he read in all?
   F. 50     G. 400     H. 504     J. 540

5. Mrs. Rivera bought 157 tiles. Each tile cost $3. How much did she spend on tiles?
   A. $160     B. $351     C. $450     D. $471

6. How many zeros are in the product of 25 and 40,000?
   F. 4     G. 5     H. 6     J. 7

7. Raul has 63 photos. His scrapbook holds 7 pictures on a page. How many pages will he use in his scrapbook?
   A. 8     B. 9     C. 10     D. 15

8. Barbara surveyed 50 students about their favorite kind of movies. The results are in the tally table below.

<table>
<thead>
<tr>
<th>Favorite Kind of Movies</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Kind</strong></td>
</tr>
<tr>
<td>-------------</td>
</tr>
<tr>
<td>Adventure</td>
</tr>
<tr>
<td>Comedy</td>
</tr>
<tr>
<td>Science Fiction</td>
</tr>
<tr>
<td>Thriller</td>
</tr>
</tbody>
</table>

Which 2 kinds of movies do 24 students enjoy seeing?
   F. Adventure and Comedy
   H. Comedy and Science Fiction
   G. Science Fiction and Adventure
   J. Thriller and Comedy
9. Amma scored 15 points and then some more points. By the end of the video game, she had scored 48 points. Which equation describes her points?

A. \( p - 15 = 48 \)  
B. \( 15 + 48 = p \)  
C. \( 15 + p = 48 \)  
D. \( 15 - p = 48 \)

9. ________

10. Jennie used a soccer magazine to list what she needed for soccer.

<table>
<thead>
<tr>
<th>Soccer Must Have List</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Item</strong></td>
</tr>
<tr>
<td>Ball</td>
</tr>
<tr>
<td>Shin Guards</td>
</tr>
<tr>
<td>Socks</td>
</tr>
<tr>
<td>Cleats</td>
</tr>
</tbody>
</table>

If Jennie buys all of the items, about how much will she spend? Round to the nearest ten.

F. $65  
G. $80  
H. $85  
J. $90

10. ________

11. What number makes this equation true?

\( 60 \times \boxed{} = 36,000 \)

11. ________

12. Miguela set up 6 rows of chairs for the school play. Each row had 24 chairs. How many chairs will she have in all?

12. ________

13. How many zeros are in the product of 36 and 50,000?

13. ________

14. Oliver has 54 cartoons. His comic book holds 6 cartoons on a page. How many pages will he use in his comic book?

14. ________

15. ________

16. Aaron has decided to read 50 books this summer. If he has 8 weeks to read books, about how many books does he need to read each week to reach his goal?

16. ________
### Anticipation Guide

**Multiply by Two-Digit Numbers**

#### Before you begin Chapter 8

- Read each statement.
- Decide whether you agree (A) or disagree (D) with the statement.
- Write A or D in the first column OR if you are not sure whether you agree or disagree, write NS (not sure).

#### After you complete Chapter 8

- Reread each statement and complete the last column by entering an A (agree) or a D (disagree).
- Did any of your opinions about the statements change from the first column?
- For those statements that you mark with a D, use a separate sheet of paper to explain why you disagree. Use examples, if possible.

<table>
<thead>

</tr>
<tr>
<td>9. In the Distributive Property of Multiplication, greater numbers are broken down so that they are easier to compute with.</td>
<td>A</td>
</tr>
<tr>
<td>10. 809 rounded to the nearest hundred is 900.</td>
<td>D</td>
</tr>
</tbody>
</table>
multiply by tens

find 355 \times 40.

step 1
think in terms of hundreds, tens, and ones. 355 = 3 hundreds + 5 tens + 5 ones.

step 2
multiply the ones. 5 \times 40 = 200.

step 3
multiply the tens \times the ones. 25 \times 5 = 125.

step 4
multiply the tens \times the hundreds. 25 \times 300 = 7,500.

step 5
multiply the tens \times the hundreds. 25 \times 400 = 10,000.

add the regrouped 200.

1,250 + 200 = 1,450.

solve.

1. 44 \times 30 = 1,320
2. 658 \times 30 = 19,740
3. 57 \times 10 = 570
4. 369 \times 50 = 18,450

multiply.

1. 12 \times 30 = 360
2. 21 \times 40 = 840
3. 14 \times 60 = 840
4. 31 \times 70 = 2,170
5. 25 \times 30 = 750
6. 29 \times 30 = 870
7. 61 \times 30 = 1,830
8. 48 \times 20 = 960
9. 19 \times 30 = 570
10. 65 \times 40 = 2,600
11. 48 \times 40 = 1,920
12. 14 \times 50 = 700
13. 49 \times 70 = 3,430
14. 42 \times 30 = 1,260
15. 80 \times 70 = 5,600
16. 26 \times 40 = 1,040
17. 17 \times 80 = 1,360
18. 135 \times 50 = 6,750
19. 207 \times 60 = 12,420
20. 399 \times 50 = 19,950
21. 756 \times 30 = 22,680
22. 375 \times 20 = 7,500
23. 409 \times 40 = 16,360
24. 967 \times 80 = 78,000
25. 549 \times 50 = 27,450
26. 105 \times 30 = 3,150

solve.

22. classroom chairs cost $39. how much will it cost to buy 50 chairs?

1,950

23. a computer costs $986. how much will it cost to buy 20 computers?

$19,720

24. classroom chairs cost $39. how much will it cost to buy 50 chairs?

$1,950

25. a computer costs $986. how much will it cost to buy 20 computers?

$19,720
**Homework Practice**

*Multiply by Tens*

**Multiply.**

1. $51 \times 30 = \underline{1,530}$
2. $712 \times 30 = \underline{21,360}$
3. $39 \times 80 = \underline{3,120}$
4. $116 \times 10 = \underline{1,160}$
5. $67 \times 20 = \underline{1,340}$
6. $85 \times 80 = \underline{14,800}$
7. $325 \times 60 = \underline{19,500}$
8. $490 \times 90 = \underline{44,100}$
9. $608 \times 40 = \underline{24,320}$
10. $490 \times 90 = \underline{44,100}$
11. $999 \times 10 = \underline{9,990}$
12. $740 \times 50 = \underline{37,000}$

**Solve.**

13. There are 40 rows of lockers. There are 12 lockers in each row. How many lockers are there? 480 lockers

14. Pablo found out that every classroom has 34 desks. There are 30 classrooms. How many desks are in the school? 1,020 desks

**Spiral Review**

*Multiply. (Lesson 7–7)*

15. $604 \times 3 = \underline{1,812}$
16. $6,005 \times 8 = \underline{48,040}$
17. $3,100 \times 9 = \underline{27,900}$

**Solve.**

18. Mr. Sims printed 303 museum trip notices for the students in each grade. The museum trip was for 3 grades. How many notices did he print? 909 notices

19. It costs $5 for each student to enter the museum. How much money did Mr. Sims need for 909 students to enter the museum? $4,545

20. 600 students from another school joined the 909 students who were with Mr. Sims. The museum provided a study guide for each student. The study guides cost the museum $2 each to print. How much did it cost the museum to provide study guides for all of the students? $3,018

**Problem-Solving Practice**

*Multiply by Tens*

**Solve.**

1. Teams of 16 students are helping the town clean the park. There are 20 teams in all. How many students are cleaning the park? 320 students

2. Students are going on a field trip in 10 buses. Each bus carries 35 students. How many students can go on the field trip? 350 students

3. Mr. Parker arranged 1 van for every 12 students to travel to the zoo. A total of 40 vans were needed. How many students went on the trip? 480 vans

4. It cost $14 to buy tickets for each student to go to the petting zoo. Mr. Parker bought tickets for 30 students. How much did the tickets cost? $420

5. The 32 caretakers make sure that all of the animals are checked on each day at the zoo. How many animals are at the zoo if each caretaker checks on 30 animals? 960 animals

6. 27 students run in a charity race to raise money for the zoo. Thirteen of the students each raise $20. The rest of the students each raise $30. How much did the students raise in all? $680
### Answers (Lessons 8-1 and 8-2)

#### Enrich

**Four-Square**

One multiplication problem appears in each four-square below. Fill it up by writing three multiples of ten as you can.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>30 \times 500 = 15,000</td>
<td>3 \times 5,000 \times 3,000</td>
</tr>
<tr>
<td>50 \times 300 = 15,000</td>
<td>50 \times 300</td>
</tr>
<tr>
<td>3 \times 5,000 \times 3,000 = 45,000</td>
<td>3 \times 5,000 \times 3,000</td>
</tr>
</tbody>
</table>

#### Reteach

**Estimate Products**

You can round to estimate products. Round each factor to its greatest place. Then multiply using patterns with zeros. Possible answers are given.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Estimation</th>
</tr>
</thead>
<tbody>
<tr>
<td>54 \div 9 \times 50 = 2,700</td>
<td>50 \times 50 = 2,500</td>
</tr>
<tr>
<td>829 \div 32 \times 30 = 7,875</td>
<td>800 \times 100 = 80,000</td>
</tr>
<tr>
<td>788 \div 51 \times 800 = 14,000</td>
<td>800 \times 100 = 80,000</td>
</tr>
</tbody>
</table>

#### Practice

Estimate each product.

1. $54 \times 19$
   - $50 \times 20 = 1,000$
2. $29 \times 32$
   - $30 \times 30 = 900$
3. $788 \div 51 \times 800$
   - $800 \times 100 = 80,000$
4. $37 \times 49$
   - $40 \times 50 = 2,000$
5. $23 \times 51$
   - $20 \times 50 = 1,000$
6. $69 \times 19$
   - $70 \times 20 = 1,400$
7. $19 \times 315$
   - $20 \times 300 = 6,000$
8. $69 \times 31$
   - $70 \times 30 = 2,100$
9. $90 \times 300$
   - $90 \times 300 = 27,000$
10. $19 \times 803$
    - $20 \times 800 = 16,000$
11. $46 \times 156$
    - $50 \times 200 = 10,000$
12. $92 \times 228$
    - $90 \times 200 = 18,000$
### Skills Practice

#### Estimate Products

<table>
<thead>
<tr>
<th>Estimate each product</th>
<th>Sample estimates are given. Accept all reasonable estimates.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. 49 × 59</td>
<td>3,000</td>
</tr>
<tr>
<td>2. 55 × 65</td>
<td>4,200</td>
</tr>
<tr>
<td>3. 41 × 52</td>
<td>600</td>
</tr>
<tr>
<td>4. 18 × 29</td>
<td>40,000</td>
</tr>
<tr>
<td>5. 98 × 402</td>
<td>63,000</td>
</tr>
<tr>
<td>6. 71 × 874</td>
<td>$12,000</td>
</tr>
<tr>
<td>7. 61 × 216</td>
<td>32,000</td>
</tr>
<tr>
<td>8. 81 × 350</td>
<td>24,000</td>
</tr>
<tr>
<td>9. 42 × 605</td>
<td>20,000</td>
</tr>
<tr>
<td>10. 23 × 999</td>
<td></td>
</tr>
</tbody>
</table>

Solve by estimating each product.

21. The price of a bus ticket is $58. About how much will tickets cost for a group of 62 passengers? $60 × $60 = $3,600

22. An airline ticket costs $375. About how much will tickets cost for a group of 25 people? $400 × $30 = $12,000

23. Michael averages 12 points in each football game. About how many points will he score in 12 games? 10 × 10 = 100 points

24. Rachel creates 14 paintings a month. About how many paintings will she create in 2 years? 10 × 20 = 200 paintings

### Homework Practice

#### Estimate Products

<table>
<thead>
<tr>

Problem-Solving Practice
Estimate Products

Sample estimates are given. Accept all reasonable estimates.

1. Each of 32 classrooms has 4 computers. About how many computers are there in all?
   **120 computers**

2. A new keyboard for the computer costs $49. The school is buying 18 keyboards. About how much will they cost?
   **$1,000**

3. There are 42 times for students to work in the computer lab during one week. If 19 students can work in the computer lab at one time, about how many students can work in the computer lab during one week?
   **800 students**

4. The school is buying 28 new computers for the computer lab. One computer costs $812. About how much will all of the computers cost?
   **$24,000**

5. The school district is buying laser printers for 62 schools. Each printer costs $898. About how much will all the printers cost?
   **$54,000**

6. The school district is buying software for virus protection. Each software package costs $48. There are 685 computers all together in the district’s schools. About how much will the software cost?
   **$35,000**

Enrich
Weigh Cool

Rounding is a good way to estimate products when you don’t need a precise answer. First estimate these products and use > or < to show which package weighs more. Then multiply to check your answers.

- 37 tons \(\times\) 42 = 1,554
  - 56 tons \(\times\) 21 = 1,176
  - 1,554 > 1,176

- 78 pounds \(\times\) 11 = 858
  - 42 pounds \(\times\) 98 = 4,116
  - 858 < 4,116

- 87 ounces \(\times\) 84 = 7,308
  - 65 ounces \(\times\) 33 = 2,145
  - 7,308 > 2,145

- 57 kilograms \(\times\) 59 = 3,363
  - 84 kilograms \(\times\) 29 = 2,436
  - 3,363 > 2,436
Reteach

Problem-Solving Strategy

Yolan has 3 bills equaling $20. What combination of $1, $5, $10, $20, or $50 bills does he have?

Understand

Be sure you understand the problem.
What do you know?
• Yolan has 3 bills
• The value of those bills is $20.
What do you need to find?
• You need to find what bills Yolan has.

Plan

Make a plan.
You can act out the problem using play money.

Solve

Use play money to act out different combinations of $20.
Cut out pieces of paper to represent different amounts of money.
Try out different possibilities with the bills.
He could have two $5 bills and one $10 bill.

Check

Is the solution reasonable?
Reread the problem. Check your answer.

Solve. Use the act it out strategy.

1. Rod has 20 coins having the value of $6. What coins does he have?
   Sample answer: 10 fifty-cent pieces, 10 dimes

2. List 3 combinations to create a value of 64 cents.
   Sample answers: 64 pennies; 1 fifty-cent piece, 1 dime, 4 pennies; 2 quarters, 2 nickels, 4 pennies

3. Angie is 8 years old. She is one-fifth her father’s age. How old is her father?
   40 years old

4. You decide to start a business making T-shirts with Joe, Frank, and Eddie. In one day Joe created 6 more than Frank. Frank created 4 less than Eddie. On that day, the total number of T-shirts the boys created was 22. How many shirts did each boy create?
   Joe 10, Frank 4, Eddie 8

5. The boys have $100 to spend. They have a total of four bills. They are either $5, $10, $20, or $50 bills. What combination of bills do they have?
   one $50 bill, two $20 bills, one $10 bill

6. There are 10 people interested in buying shirts. All 10 people unfold and inspect the 22 shirts. After each person unfolds a shirt, Frank folded it again. How many times did Frank refold shirts?
   220 times

7. After selling shirts, the boys had $500 in cash. They had a total of 19 bills. What combination of bills do they have?
   four $50 bills, fifteen $20 bills

8. Eddie figured out that he could cut a large square of fabric into 4 small squares, and each small square was enough for 1 T-shirt. In the end, the boys ruined 2 shirts and had 22 good ones. How many large squares of fabric did they start with?
   6 large squares

9. Leah is 13 years older than Jillian. Jillian is 2 years younger than Steve. If Steve is 11, how old is Leah?
   22 years old
Solve. Use the act it out strategy.

1. Ann is 50. Ann is twice the age of her daughter, Cindy. Cindy's daughter is 20 years younger than her mother. How old is Cindy's daughter? 5 years old

2. Jane is 64 years old and 4 years older than 3 times Linda's age. How old is Linda? 20 years old

3. Jerry has 12 bills equaling $100. ($5, $10, $20, $50) What combination of bills does he have? five $10 bills, one $20 bill, six $5 bills

4. Fred has 34 coins equaling $3. What combination of coins does he have? 4 quarters, 10 dimes, 20 nickels

5. The Gomez family goes to a symphony concert. They buy 1 adult ticket at $15.75 and 3 youth tickets at $9.98. How much does the Gomez family spend for tickets? $45.69

6. There are 30 students in the lunch line. On the shelf there are an equal number of 5 different kinds of drinks. If there are 30 drinks on the shelf, how many people will have the same kind of drink? 6 people

Spiral Review

Estimate each product. (Lesson 8–2)

7. $26 \times 3 \quad 90$
8. $478 \times 41 \quad 20,000$
9. $23 \times 7 \quad 140$
10. $850 \times 12 \quad 9,000$
11. $78 \times 32 \quad 2,400$
12. $618 \times 19 \quad 12,000$
13. $96 \times 11 \quad 1,000$
14. $275 \times 29 \quad 9,000$
15. $211 \times 5 \quad 1,000$
16. $325 \times 52 \quad 15,000$
17. Circle all of the numbers on this page that are multiples of tens. See students' work.
Almost 2,000 kids went to Camp Guthrie last summer—884 boys and 965 girls. Most of them bought clothes at the Guthrie Gift Shop.

Write three questions you can ask and answer by multiplying.

1. **Answers will vary. For example:** How much would be spent by all the girls if they each bought a pair of shorts? 

   \[ 35 \times 965 = $33,775.00 \]

2. **Add 3 items to the Guthrie Gift Shop price list. Create two more questions that you can ask and answer by multiplying. Be sure to use the new items in your questions!**

   1. __________________________
   2. __________________________
   3. __________________________

   Trade with a partner to check each other’s work.

**Reteach**

### Multiply Two-Digit Numbers

Find 36 \times 26.

Estimate: 40 \times 30 = 1,200

**Step 1** Multiply the ones. Regroup if necessary. Cross out the amount you regroup when you add it.

\[
\begin{array}{c}
3 \\
3 \\
6 \\
\end{array}
\times \begin{array}{c}
2 \\
6 \\
\end{array}
\]

\[
\begin{array}{c}
2 \\
1 \\
6 \\
\end{array}
\]

**Step 2** Multiply the tens. Regroup if necessary. Cross out the amount you regroup when you add it. Remember, a zero is in the ones place when you multiply the tens.

\[
\begin{array}{c}
1 \\
3 \\
6 \\
\end{array}
\times \begin{array}{c}
2 \\
6 \\
\end{array}
\]

\[
\begin{array}{c}
2 \\
1 \\
6 \\
\end{array} \quad \begin{array}{c}
6 \\
\end{array} \quad \begin{array}{c}
6 \\
\end{array}
\]

\[
\begin{array}{c}
7 \\
2 \\
0 \\
\end{array} \quad \begin{array}{c}
2 \times 3 \\
6 \times 6 \\
\end{array}
\]

**Step 3** Add.

\[
\begin{array}{c}
1 \\
3 \\
6 \\
\end{array}
\times \begin{array}{c}
2 \\
6 \\
\end{array}
\]

\[
\begin{array}{c}
2 \\
1 \\
6 \\
\end{array} \quad \begin{array}{c}
6 \\
\end{array} \quad \begin{array}{c}
6 \\
\end{array}
\]

\[
\begin{array}{c}
7 \\
2 \\
0 \\
\end{array} \quad \begin{array}{c}
2 \times 3 \\
6 \times 6 \\
\end{array}
\]

\[
\begin{array}{c}
9 \\
3 \\
6 \\
\end{array}
\]

**Multiply.**

1. \[ 14 \times 22 = 308 \]
2. \[ 30 \times 13 = 390 \]
3. \[ 42 \times 17 = 714 \]
4. \[ 30 \times 24 = 720 \]

Solve. (Lesson 8-3)

19. George had 3 fewer basketball cards yesterday than he does today. Yesterday he had 9 basketball cards. How many basketball cards does George have today?
   12 cards

20. Judy, Lakesha, and Tina each like a different color, either red, green, or blue. Judy likes green. Tina does not like blue. What color does Lakesha like?
   blue
### Problem-Solving Practice

**Multiply Two-Digit Numbers**

**4NS3.2, 4NS3.3**

**Solve.**

1. There are 15 students in each school club. There are 20 clubs in all. How many students are in all of the clubs? Multiply. Tell which method you used.  
**300 students; methods used will vary.**

2. There are 15 students in the art club. By the end of the school year, each student had made 23 pictures. How many pictures did the students make in all? Multiply. Tell which method you used.  
**345 pictures; methods used will vary.**

3. The fourth-grade students at Tremont School receive a ribbon if they read 50 books during the school year. There are 69 ribbons given out at the end of the year. How many books did the students read in all? Multiply. Tell which method you used.  
**3,450 books; methods used will vary.**

4. There are 27 students in Mr. Jacob’s class. By the end of the school year, each student will have completed 72 tasks on the class schedule. How many tasks will have been completed? Multiply. Tell which method you used.  
**1,944 tasks; methods used will vary.**

5. The town’s camera store bought 98 cameras for school photography clubs to use. Each camera cost $57. How much did the cameras cost in all? Multiply. Tell which method you used.  
**$5,586; methods used will vary.**

6. There are 35 students in the photography club at Columbus School. Each student was given enough rolls of film to take 72 photos. How many photos did the students take in all? Multiply. Tell which method you used.  
**2,520 photos; methods used will vary.**

### Enrich

**Fill the Grid**

Use a number cube to roll the top two numbers for each multiplication problem in the grid. Trade with a partner to check each other’s work.

**Answers will depend on the numbers rolled.**

\[
\begin{array}{ccc}
\times 14 & \times 35 & \times 62 \\
\times 53 & \times 89 & \times 71 \\
\times 27 & \times 94 & \times 56 \\
\end{array}
\]
Find 411 × 12. Estimate: 400 × 10 = 4,000

Step 1 Multiply the ones. 411 × 2

\[
\begin{array}{c}
411 \\
\times 12 \\
\hline
822 \\
\end{array}
\]

Step 2 Multiply the tens. 411 × 10

Remember, a zero is in the ones place when you multiply the tens.

\[
\begin{array}{c}
411 \\
\times 10 \\
\hline
4110 \\
\end{array}
\]

Step 3 Add the products. 822 + 4110

\[
\begin{array}{c}
411 \\
\times 12 \\
\hline
822 \\
\hline
4110 \\
\hline
4932 \\
\end{array}
\]

Solve.

21. Ali’s mom said for every 20 hours Ali worked, she would earn $150. After Ali worked 40 hours, how much did she earn? $300

22. Patti’s heart beats 125 times in a minute. How many times does her heart beat in an hour? 7,500 times
Multiply. (Lesson 8-4)

21. $25 \times 62 = 1,550$
22. $19 \times 38 = 722$
23. $95 \times 82 = 7,970$
24. $22 \times 17 = 374$
25. $89 \times 21 = 1,859$
26. $49 \times 11 = 539$
27. $62 \times 45 = 2,790$
28. $79 \times 63 = 4,977$
29. $38 \times 26 = 988$
30. $45 \times 18 = 810$
31. $79 \times 83 = 6,375$
32. $66 \times 27 = 1,782$
33. $92 \times 37 = 3,404$
34. $42 \times 79 = 3,318$
35. Look back at exercises 21–34 and circle all factors that are multiples of 5.

36. A classroom set of books about space exploration costs $234. There are 16 classes. How much will books for all of the classes cost? Multiply. Check that the answer is reasonable.

$3,744$

37. The tile crew can lay 878 tiles in one day. How many tiles can the crew lay in 62 days? Multiply. Check that the answer is reasonable.

54,436 tiles

38. There are 981 floor tiles in one classroom in the school. How many floor tiles will it take to replace the tiles in 28 classrooms? Multiply. Check that the answer is reasonable.

27,468 tiles

Reteach

Problem-Solving Investigation

Mandy went shopping. Her mother gave her a bank card to use and told her that she could not spend more than $200. Mandy spent $56 in the first store, $87 in the next, then $95, and finally $103. When she got home, Mandy told her mother that she wasn’t sure but thought she stayed under $200. Does this make mathematical sense?

Understand

Be sure you understand the problem.

What do you know?

- Mandy has a limit of $200.
- She spent $56, $87, $95, and $103.

What do you need to find?

- You need to find if Mandy stayed within her limit.

Plan

Make a plan.

You can use the make a table strategy to find how much Mandy spent. You can estimate the amount Mandy spent at each store and place the amounts in the table.

<table>
<thead>
<tr>
<th>Store #1</th>
<th>Store #2</th>
<th>Store #3</th>
<th>Store #4</th>
</tr>
</thead>
<tbody>
<tr>
<td>$56</td>
<td>$87</td>
<td>$95</td>
<td>$103</td>
</tr>
</tbody>
</table>

Solve

\[ 56 + 87 + 95 + 103 = 341 \]
\[ 341 - 200 = 141 \]

So, Mandy spent $141 over her $200 limit.

Check

Is the solution reasonable?

Reread the problem.
Check your answer.

Solve and tell what strategies you used.

1. Sandy spent $459 on gifts. She spent about $50 on each person. How many people did she buy gifts for?

   estimate, work backward; 9 people
2. Caitlin, Erin, and Jeannie are on the track team. Over the season, Caitlin won 2 times and came in second 2 times. Erin won 1 time and came in second 5 times. Jeannie did not win at all, but came in second 8 times. The runners earn 10 points for winning and 5 points for coming in second. Who got the most points this season? make a chart, use multiplication and addition; Jeannie had the most points.

3. Kyle is 4,000 days old. About how many years old is he? estimate; about 10 years old.

4. Hao solved the following problem. $42 \times 37 = 1,554$
   Explain how Hao could check his answer.
   work backward; Hao could divide 1,554 by 37 to get 42. Hao could also divide 1,554 by 42 to get 37. Hao’s answer is correct.

5. At a store, jeans are on sale for $32 and sweaters are on sale for $28. How much will it cost Mrs. Jackson to buy 3 pairs of jeans and 4 sweaters for her children? $208
   Tell which method you used.
   Methods used will vary.

6. Carmen bought 5 dozen muffins for her class. Each student got 2 muffins. Estimate how many people are in Carmen’s class and explain your answer.
   choose an operation; 30 students.

7. Every teacher at Mountain Elementary is provided 800 sheets of paper. How many sheets of paper do the 50 teachers have altogether? 40,000 sheets of paper
   Tell which method you used.
   Methods used will vary.

8. Isra is thinking of two numbers that have a sum of 7 and a product of 10. What are the two numbers? 4-Step Plan; Isra is thinking of 5 and 2.
Homework Practice

Problem-Solving Investigation

Use any strategy to solve. Tell what strategy you used.

1. It costs $216 to buy 24 tickets to the water park. How much does each ticket cost? Tell which method you used. $9; Methods will vary. Accept any reasonable choice.

2. There are 156 beads. They are divided into 12 equal groups. How many beads are in each group? Tell which method you used. 13 beads; Methods will vary. Accept any reasonable choice.

3. For a long-distance race, $175 was collected from each of 9 runners. How much was collected in all? Tell which method you used. $1,575; Methods will vary.

4. For a bicycle race, there are 432 cyclists. Each cyclist paid $12 to enter the race. How much money did the cyclists pay in all? Tell which method you used. $5,184; Methods will vary.

5. The owner of the hobby store pays $92 for an order of 23 model car kits. How much does each model car kit cost? Tell which method you used. $4; Methods will vary.

6. There were 200 model car kits delivered to the hobby store. They were packed in 25 boxes. How many model car kits were in each box? Tell which method you used. 8 model car kits; Methods will vary. Accept any reasonable choice.

Spiral Review

Multiply. (Lesson 8–5)

7. 801 x 86 = 68,886
8. 631 x 12 = 7,572
9. 511 x 59 = 30,149
10. 775 x 24 = 18,600
11. 362 x 42 = 15,204
12. 933 x 96 = 89,568
13. 339 x 33 = 11,187
14. 460 x 71 = 32,660
15. 823 x 69 = 56,787

Enrich

Napier’s Bones

In the 17th century, John Napier invented a simple calculator that multiplied by adding. Use Napier’s Bones to find 49 x 37.

1. Cut out the ten strips below. Place the 4, 9, and index strips next to each other.
2. Fold the strips so that rows 3 and 7 of the index are next to each other. See how the diagonal lines form a pattern of diagonal columns.
3. To find the product, add the numbers along the diagonal columns starting from the bottom right. The first diagonal (3) is the ones digit. The next diagonal (7 + 6 + 8 = 21) is the tens. Write 1 under the tens column and regroup 2 to the next diagonal. Add the next diagonal, 2 + 2 + 2 + 2 = 8, for the hundreds. The last diagonal (1) is the thousands. So, the product of 49 x 37 is 1,813.

Use the strips to find each product.
1. 57 x 34 = 1,938
2. 61 x 76 = 4,636
3. 85 x 29 = 2,465
4. 32 x 33 = 1,056
5. 94 x 65 = 6,110
6. 56 x 48 = 2,688

INDEX

1 1
2 2
3 3
4 4
5 5
6 6
7 7
8 8
9 9

Chapter Resources
Find $4,263 \times 43$.
Estimate: $4,000 \times 40 = 160,000$

Step 1  Multiply the ones. Regroup if necessary. Cross out the amount you regroup when you add it.

\[
\begin{array}{c}
1 \\
\times 43 \\
\hline
12,789 \\
4,263 \times 3 \\
\hline
170,520 \\
4,263 \times 40
\end{array}
\]

Step 2  Multiply the tens. Remember, a zero is in the ones place when you multiply the tens.

\[
\begin{array}{c}
1 2 1 \\
\times 43 \\
\hline
12,789 \\
4,263 \times 3 \\
\hline
170,520 \\
4,263 \times 40
\end{array}
\]

Step 3  Add.

\[
\begin{array}{c}
1 2 1 \\
\times 43 \\
\hline
12,789 \\
4,263 \times 3 \\
\hline
170,520 \\
4,263 \times 40
\end{array}
\]

Multiply.

1. $1,435 \times 45 = \boxed{64,575}$
2. $6,901 \times 38 = \boxed{262,238}$
3. $7,468 \times 31 = \boxed{231,508}$
4. $5,297 \times 12 = \boxed{63,564}$
5. $5,852 \times 52 = \boxed{304,304}$
6. $8,448 \times 24 = \boxed{202,752}$

Multiply greater numbers.

1. $693 \times 24 = \boxed{16,632}$
2. $601 \times 33 = \boxed{19,833}$
3. $8,072 \times 58 = \boxed{468,176}$
4. $907 \times 25 = \boxed{22,675}$
5. $2,901 \times 42 = \boxed{121,842}$
6. $3,888 \times 64 = \boxed{248,832}$
7. $16 \times 2,369 = \boxed{37,904}$
8. $39 \times 1,288 = \boxed{50,232}$
9. $65 \times 19,091 = \boxed{1,240,915}$
10. $78 \times 12,967 = \boxed{1,011,426}$

ALGEBRA  Complete the table.

Solve.

12. Maria and Natalie made 12 trips between New York City and Los Angeles. Each trip cost $598 per person. How much did the 12 trips cost?
   \$14,352

13. A company buys 18 computers. Each computer costs $2,245. How much does the company spend on the 18 computers?
   \$40,410
Multiply.

1. \(1,560 \times 27 = 42,120\)
2. \(5,883 \times 39 = 229,437\)
3. \(6,251 \times 32 = 337,554\)
4. \(16,846 \times 21 = 353,766\)
5. \(3,166 \times 21 = 66,486\)
6. \(81,067 \times 40 = 3,242,680\)
7. \(4,351 \times 67 = 291,517\)
8. \(25,331 \times 48 = 1,215,888\)
9. \(2,909 \times 44 = 127,996\)
10. \(37,550 \times 38 = 1,426,900\)

11. Antonio runs 2 miles a day. In one mile there is 5,280 feet. How many feet does he run in 2 weeks? 147,840 feet

12. If a panda bear eats 84 pounds of fresh bamboo sprouts every day, how many pounds of bamboo do 12 pandas eat in two weeks? 14,112 pounds of fresh bamboo sprouts

13. There are 2,734 miles between Seattle, Washington and Miami, Florida. If Consuelo travels round trip from Miami to Seattle 6 times, how many miles does she travel altogether? 32,808 miles

14. Solve. (Lesson 8–6)

16. Brady is counting the money in his piggy bank. He has $0.56. He has 3 kinds of coins and 8 coins in all. What coins does he have? 4 dimes, 3 nickels, and 1 penny.

17. Sara is thinking of two numbers that have a sum of 15 and a product of 56. What are the two numbers? Sara is thinking of 7 and 8.

18. Marc has 15 trophies. Four of the trophies are for track. He has two times as many swimming trophies as track trophies. The rest of the trophies are for soccer. How many soccer trophies does he have? 3 soccer trophies

Solve.

1. Jamie travels 3,056 miles each year. How many miles does Jamie travel in 15 years? 45,840 miles

2. Fourteen members of the crafts club are making necklaces. It takes 202 beads to make each necklace. How many beads will they need if they each make 5 necklaces? 14,140 beads

3. An elephant weighs 13,500 pounds. How much would 25 elephants the same size weigh all together? 337,500 pounds

4. Jason is taking a bus to visit his grandparents. The bus trip is 113 miles each way. How many miles will Jason travel to and from his grandparents’ house? Write the multiplication sentence and solve. 113 \(\times\) 2 = 226 miles

5. Jack is a pilot for a large airline. He plans on retiring in 11 years. Every week, he follows the same schedule of flights. He knows that he flies 78,434 miles each year. How many miles will he fly before he retires? 862,774 miles

6. The city parks commission wants to build a new park. The model has 6 tennis courts. Each tennis court will cost $92,378. The city does not want to pay more than $550,000 for all 6 courts. How much will the tennis courts cost? $554,268

Will the city be able to build all of them? no
Enrich

Eight Million or More

Using the digits 3, 4, 5, 6, 7, 8, and 9, write at least five multiplication problems with a product of eight million or more. You may not use the same digit more than once in the same problem. Multiply to check your answers.

For example:

96,543 \times 87 = 8,399,241
87,543 \times 96 = 8,404,128
9,654 \times 873 = 8,427,942
9,734 \times 865 = 8,419,910
9,743 \times 865 = 8,427,695

Using the same digits (3, 4, 5, 6, 7, 8, and 9), write at least five numbers that round to six million. Round to check your answers.

For example:

6,345,987, 5,783,469, 5,983,467, 6,435,789, 5,836,749

Now, create a problem for a partner.

Choose seven digits ___ ___ ___ ___ ___ ___ ___

Create a question. For example, write at least five addition problems with a sum less than four million.

Answers will vary

Trade with a partner, and complete each other’s problems.

Match each word to its definition. Write your answers on the lines provided.

1. Distributive Property of Multiplication \( \text{D} \)
2. estimate \( \text{E} \)
3. multiplication \( \text{F} \)
4. product \( \text{A} \)
5. round \( \text{B} \)
6. whole number \( \text{C} \)

A. The answer to a multiplication problem.
B. To change the value of a number to one that is easier to work with. To find the nearest value of a number based on a given place value.
C. The numbers 0, 1, 2, 3, and 4.
D. The property that states that to multiply a sum by a number, you can multiply each addend by the same number and add the products.
E. A number close to an exact value.
F. An operation on two numbers to find their product. It can be thought of as repeated addition.
For this activity you will need 30 counting blocks. Put 10 blocks in a row to make a line of blocks.

Read each question aloud to the student. Then write the student's answers on the lines below the question.

1. How many blocks are in the row?
   10

2. If you multiplied the number of blocks by 2, how many blocks would you have?
   10 more blocks

3. Tell how you got your answer.
   10 \times 2 = 20

4. If you stacked 10 more blocks on top, how many blocks would there be?
   10 \times 3 = 30

5. If you divided those 30 blocks in half, how many blocks would be in each group?
   15

6. Instead of stacking the blocks in groups of ten, how could you stack them in even rows?
   Sample answer: 2 rows of 15 blocks

7. Explain your answer.
   Sample answer: There are two ways to stack the blocks evenly. The first way, 3 rows of 10 blocks. The second way, 2 rows of 15 blocks.

Use the chart above to answer the following questions:

8. How many orders of chips would a person eat over 3 years?
   225 orders of chips

9. Prove your answer.
   75 \times 3 = 225

10. What is the rounded amount of sandwiches a person eats in a year?
    60

11. Tell how you got your answer.
    58 is closer to 60 than 50, so it rounds up to 60.

12. About how many sandwiches would a person eat over 10 years?
    600 sandwiches

13. Explain your answer.
    58 rounds to 60. 60 \times 10 = 600

19. 506,880 yards

20. 14,000 pounds

2–4; Sample estimates are given. Accept all reasonable estimates
## Level Specific Criteria

### 4
The student demonstrates a **thorough understanding** of the mathematics concepts and/or procedures embodied in the task. The student has responded correctly to the task, used mathematically sound procedures, and provided clear and complete explanations and interpretations. The response may contain minor flaws that do not detract from the demonstration of a thorough understanding.

### 3
The student demonstrates an **understanding** of the mathematics concepts and/or procedures embodied in the task. The student’s response to the task is essentially correct with the mathematical procedures used and the explanations and interpretations provided demonstrating an essential but less than thorough understanding. The response may contain minor errors that reflect inattentive execution of the mathematical procedures or indications of some misunderstanding of the underlying mathematics concepts and/or procedures.

### 2
The student has demonstrated only a **partial understanding** of the mathematics concepts and/or procedures embodied in the task. Although the student may have used the correct approach to obtaining a solution or may have provided a correct solution, the student’s work lacks an essential understanding of the underlying mathematical concepts. The response contains errors related to misunderstanding important aspects of the task, misuse of mathematical procedures, or faulty interpretations of results.

### 1
The student has demonstrated a **very limited understanding** of the mathematics concepts and/or procedures embodied in the task. The student’s response to the task is incomplete and exhibits many flaws. Although the student has addressed some of the conditions of the task, the student reached an inadequate conclusion and/or provided reasoning that was faulty or incomplete. The response exhibits many errors or may be incomplete.

### 0
The student has provided a **completely incorrect** solution or uninterpretable response, or no response at all.
In addition to the scoring rubric found on page A27, the following sample answers may be used as guidance in evaluating open-ended assessment items.

1. The problem $69 \times 20$ does not belong with the other 3 because the product is a 4 digit number. The other 3 problems result in a 3 digit number.

2. The word “about” in a problem gives the hint to estimate because an exact answer is not needed.
   a. You estimate a product by rounding each factor to its greatest place.

3. **Step 1:**

   I know that Sonya has 5 coins.
   I know that the value of the coins is $0.75.
   I need to find out what coin combination she has.

   **Step 2:**

   I will use coins to act out different combinations of $0.75.$

   **Step 3:**

   One way to make $0.75$ is with 3 quarters. But with that combination, there are only 3 coins. I need 2 more coins.
   
   Another way to make $0.75$ is with 2 quarters, 2 dimes and 1 nickel. That combination includes 5 coins.
   
   So, Sonya has 2 quarters, 2 dimes and 1 nickel.

   **Step 4:**

   I will check my work.
   
   In looking back at the problem, the answer makes sense for the problem. So, the answer is correct.
Chapter 8 Assessment Answer Key

1. B
