Important Safety Information

Read all safety information before operating the equipment. Save these instructions.

Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

a) To reduce the risks of fire or explosion, electrical shock and the injury to persons, read and understand all instructions included in this manual. Be familiar with the controls and proper usage of the equipment.

Grounding Instructions

This product must be grounded. In the event of an electrical short circuit, grounding reduces the risk of electric shock by providing an escape wire for the electric current. This product is equipped with a cord having a grounding wire with an appropriate grounding plug. The plug must be plugged into an outlet that is properly installed and grounded in accordance with all local codes and ordinances.

WARNING - Improper installation of the grounding plug can result in a risk of electric shock.

If repair or replacement of the cord or plug is necessary, do not connect the green grounding wire to either flat blade terminal. The wire with insulation having a green outer surface with or without yellow stripes is the grounding wire and must be connected to the grounding pin.

Check with a qualified electrician or serviceman if the grounding instructions are not completely understood, or if you are in doubt as to whether the product is properly grounded. Do not modify the plug provided. If the plug will not fit the outlet, have the proper outlet installed by a qualified electrician.

This product is for use on a nominal 120 volt circuit and has a grounding plug that looks like the plug illustrated below. Make sure that the product is connected to an outlet having the same configuration as the plug. No adapter should be used with this product.

b) WARNING - To reduce the risk of fire or explosion:

1. Do not spray flammable or combustible materials near an open flame, pilot lights or sources of ignition such as hot objects, cigarettes, motors, electrical equipment and electrical appliances. Avoid creating sparks from connecting and disconnecting power cords.

2. Use extreme caution when using materials with a flashpoint below 70°F (21°C). Flashpoint is the temperature that a fluid can produce enough vapors to ignite.

3. Paint or solvent flowing through the equipment is able to result in static electricity. Static electricity creates a risk of fire or explosion in the presence of paint or solvent fumes. All parts of the spray system, including the pump, hose assembly, spray gun and objects in and around the spray area shall be properly grounded to protect against static discharge and sparks. Use only conductive or grounded high-pressure airless paint sprayer hoses specified by the manufacturer.

4. Verify that all containers and collection systems are grounded to prevent static discharge.

5. Connect to a grounded outlet and use grounded extension cords (electric models only). Do not use a 3 to 2 adapter.

6. Do not use a paint or solvent containing halogenated hydrocarbons. Such as chlorine, bleach, mildewcide, methylene chloride and trichloroethane. They are not compatible with aluminum. Contact the coating supplier about compatibility of material with aluminum.

7. Keep spray area well ventilated. Keep a good supply of fresh air moving through the area to keep the air within the spray area free from accumulation of flammable vapors. Keep pump assembly in well ventilated area. Do not spray pump assembly.

8. Do not smoke in the spray area.

9. Do not operate light switches, engines, or similar spark producing products in the spray area.

10. Keep area clean and free of paint or solvent containers, rags, and other flammable materials.

11. Know the contents of the paint and solvents being sprayed. Read all Material Safety Data Sheets (MSDS) and container labels provided with the paints and solvents. Follow the paint and solvent manufacturer’s safety instructions.

12. Place pump at least 25 feet (7.62 meters) from the spray object in a well ventilated area (add more hose if necessary). Flammable vapors are often heavier than air. Floor area must be extremely well ventilated. The pump contains arcing parts that emit sparks and can ignite vapors.

13. Plastic can cause static sparks. Never hang plastic to enclose spray area. Do not use plastic drop cloths when spraying flammable material.

14. Fire extinguisher equipment shall be present and working.

c) WARNING - To reduce the risk of skin injection:

1. Do not aim the gun at, or spray any person or animal.

2. Keep hands and other body parts away from the discharge. For example, do not try to stop leaks with any part of the body.

3. Always use the nozzle tip guard. Do not spray without the nozzle tip guard in place.

4. Only use a nozzle tip specified by the manufacturer.

5. Use caution when cleaning and changing nozzle tips. In the case where the nozzle tip clogs while spraying, ALWAYS lock gun trigger, shut pump off, and release all pressure before servicing, cleaning tip or guard, or changing tip. Pressure will not be released by turning off the motor. The PRIME SPRAY valve or pressure bleed valve must be turned to their appropriate positions to relieve system pressure. Refer to PRESSURE RELIEF PROCEDURE described in the pump manual.

6. Do not leave the unit energized or under pressure while unattended. When the unit is not in use, turn off the unit and relieve the pressure in accordance with the manufacturer’s instructions.

7. High-pressure spray is able to inject toxins into the body and cause serious bodily injury. In the event that injection occurs, seek medical attention immediately.

8. Check hoses and parts for signs of damage, a leak can inject material into the skin. Inspect hose before each use. Replace any damaged hoses or parts.

8. Check hoses and parts for signs of damage, a leak can inject material into the skin. Inspect hose before each use. Replace any damaged hoses or parts.
9. This system is capable of producing 2800 PSI / 193 Bar (9145) or 3000 PSI / 207 Bar (9155/9175/9195). Only use replacement parts or accessories that are specified by the manufacturer and that are rated a minimum of 3000 PSI. This includes spray tips, nozzle guards, guns, extensions, fittings, and hose.

10. Always engage the trigger lock when not spraying. Verify the trigger lock is functioning properly.

11. Verify that all connections are secure before operating the unit.

12. Know how to stop the unit and bleed pressure quickly. Be thoroughly familiar with the controls. Pressure will not be released by turning off the motor. The PRIME/SPRAY valve or pressure bleed valve must be turned to their appropriate positions to relieve system pressure. Refer to PRESSURE RELIEF PROCEDURE described in the pump manual.

13. Always remove the spray tip before flushing or cleaning the system.

**NOTE TO PHYSICIAN:**
Injection into the skin is a traumatic injury. It is important to treat the injury as soon as possible. DO NOT delay treatment to research toxicity. Toxicity is a concern with some coatings injected directly into the bloodstream. Consultation with a plastic surgeon or reconstructive hand surgeon may be advisable.

**d) WARNING - To reduce the risk of injury:**
1. Always wear appropriate gloves, eye protection, clothing and a respirator or mask when painting. Hazardous vapors – Paints, solvents, insecticides, and other materials can be harmful if inhaled or come in contact with body. Vapors can cause severe nausea, fainting or poisoning.

2. Do not operate or spray near children. Keep children away from equipment at all times.

3. Do not overreach or stand on an unstable support. Keep effective footing and balance at all times.

4. Stay alert and watch what you are doing.

5. Do not operate the unit when fatigued or under the influence of drugs or alcohol.

6. Do not kink or over-bend the hose. Airless hose can develop leaks from wear, kinking and abuse. A leak can inject material into the skin.

7. Do not expose the hose to temperatures or pressures in excess of those specified by manufacturer.

8. Do not use the hose as a strength member to pull or lift the equipment.

9. Use lowest possible pressure to flush equipment.

10. Follow all appropriate local, state and national codes governing ventilation, fire prevention and operation.

11. The United States Government Safety Standards have been adopted under the Occupational Safety and Health Act (OSHA). These standards, particularly part 1910 of the General Standards and part 1926 of the Construction Standards should be consulted.

12. Before each use, check all hoses for cuts, leaks, abrasion or bulging of cover. Check for damage or movement of couplings. Immediately replace hose if any of those conditions exist. Never repair a paint hose. Replace with a conductive high-pressure hose.

13. Do not spray outdoors on windy days.

14. Always unplug cord from outlet before working on equipment (electric models only).

---

**Important Electrical Information**

**IMPORTANT:** Use only a 3-wire extension cord that has a 3-blade grounding plug and a 3-slot receptacle that will accept the plug on the product. Make sure your extension cord is in good condition. When using an extension cord, be sure to use one heavy enough to carry the current your product will draw. An undersized cord will cause a drop in line voltage resulting in loss of power and overheating. A 14 or 12 gauge cord is recommended (see chart). If an extension cord is to be used outdoors, it must be marked with the suffix W-A after the cord type designation. For example, a designation of SJTW-A would indicate that the cord would be appropriate for outdoor use.

<table>
<thead>
<tr>
<th>Cord gauge</th>
<th>Maximum cord length</th>
</tr>
</thead>
<tbody>
<tr>
<td>12</td>
<td>150 feet</td>
</tr>
<tr>
<td>14</td>
<td>100 feet</td>
</tr>
</tbody>
</table>

Do not use more than 100 feet of spray hose. If you need to spray further than 100 feet from your power source, use more extension cord, not more spray hose.

**Specifications:**

**Capacity:**

- 9145 . . . . . . . . . . . . . . . . Up to .29 gallon (1.10 liter) / min
- 9155 . . . . . . . . . . . . . . . . Up to .33 gallon (1.25 liter) / min
- 9175 . . . . . . . . . . . . . . . . Up to .38 gallon (1.40 liter) / min
- 9195 . . . . . . . . . . . . . . . . Up to .42 gallon (1.60 liter) / min

**Power source:**

- 9145 . . . . . . . . . . . . . . . . 1/2 Hp universal motor
- 9155 . . . . . . . . . . . . . . . . 5/8 Hp universal motor
- 9175 . . . . . . . . . . . . . . . . 3/4 Hp permanent magnet DC motor
- 9195 . . . . . . . . . . . . . . . . 7/8 Hp permanent magnet DC motor

**Power requirement:** 15 amp minimum circuit on 115 VAC, 60 Hz current

**Generator power requirement:** 5000 Watt
**What's in the box?**

*Certain parts of the sprayer will not be assembled out of the box. Be sure to read Assembly Instructions, page 6.*

**Notice:**

This pump is available in a stand model (9145) and cart models (9155 shown right, 9175 and 9195). All information given for the stand model applies to the cart model except where indicated.

Some of the graphics in this manual may not exactly match your sprayer and spray gun. All information and instructions given in this manual applies to all models except where noted.

The type of spray gun and length of spray hose included depends upon the pump model you have. Refer to the chart below for details.

**Spray Gun Assembly**

**Spray Hose Assembly**

**Sprayer Assembly**
Controls and Functions

ON/OFF switch:
The ON/OFF switch turns power to sprayer on and off. (O=OFF, I=ON)

PRIME/SPRAY knob:
The PRIME/SPRAY knob directs material to the material return tube when set to PRIME or to spray hose when set to SPRAY.

Spray hose:
The spray hose connects the spray gun to the pump.

Spray gun:
The spray gun controls the delivery of the material being pumped.

AutoOiler (9155, 9175, 9195 only):
The AutoOiler is designed to provide lubrication to the fluid section of the pump.

Sureflo Valve:
The Sureflo Valve is designed to keep the inlet valve open and from sticking to dried materials. The Sureflo Valve is activated manually by the user.

Pressure Control Dial:
The pressure control dial regulates the amount of force the pump uses to push the fluid.

VersaTip:
The VersaTip spray tip can be adjusted based on your spraying needs.

Trigger lock:
Engage the trigger lock whenever the gun is not in use.

GS-07 / GS-08 - The gun is locked when the trigger lock is at a 90º angle (perpendicular to the trigger in either direction).

Suction tube (a):
The suction tube draws the fluid from the original container into the pump.

Material return tube (b):
Fluid is sent out through the return tube and back into the original container when the PRIME/SPRAY knob is in the PRIME position.

Proper use and functions
Start

Do not use!
This pump should not be used with textured materials, block filler, asphalt sealer or materials containing HHC. See coating supplier if flash point is not listed on the container

Safety features:
Spray gun trigger lock and pressure diffuser; built-in tip safety guard; PRIME/SPRAY knob for safe pressure release. Conforms to UL STD 1450. Certified to CAN/CSA C22.2 NO 68-92

Sprays a variety of paints (oil-based and latex), primers, stains, preservatives and other nonabrasive materials.

Collapsible handle:
The cart handle can be collapsed for easier storage. Turn the cart knobs counter-clockwise to unlock the handle. Turn the cart knobs clockwise to lock the handle into place.

Capability:
Sprays a variety of paints (oil-based and latex), primers, stains, preservatives and other nonabrasive materials.

Do not use!
This pump should not be used with textured materials, block filler, asphalt sealer or materials containing HHC. See coating supplier if flash point is not listed on the container

Sprays a variety of paints (oil-based and latex), primers, stains, preservatives and other nonabrasive materials.
1. Assembly

**Start**

**You will need:**
- Two adjustable wrenches

**IMPORTANT:** Do not plug in the power cord until assembly is complete.

**Note:** It will be much easier to attach the hose to the sprayer if you uncoil it first.

1. Insert the ends of the hose bracket into the holes of the handle as shown.

2. Remove the plug from inside the hose fittings and remove the cap on the outlet valve. Discard both.

3. Thread one end of the high pressure spray hose to the spray hose port.

4. Hold the port with an adjustable wrench, and tighten the hose with the other.

5. Thread the other end of the hose to the spray gun. Hold the gun with one adjustable wrench, and tighten the hose nut with the other.

6. Remove cap from the Sureflo valve (a). Thread the suction tube onto the inlet valve and tighten firmly by hand.

**Note:** Be sure that the threads are straight so that the fitting turns freely.

7. Press the return tube onto the return tube fitting. Squeeze clip over the return tube fitting to secure the return tube.

**You will need:**
- Two adjustable wrenches

**IMPORTANT:** Do not plug in the power cord until assembly is complete.

**Note:** It will be much easier to attach the hose to the sprayer if you uncoil it first.
Pressure Relief Procedure*
*Perform when instructed

Start

Important Safety Warning

Be sure to follow the Pressure Relief Procedure when shutting the unit off for any purpose. This procedure is used to relieve pressure from the spray hose. Failure to do so could result in serious injury.

You will need:
- A waste bucket

Important Safety Warning

Be careful when handling the spray gun so you don’t accidentally spray yourself. The high pressure paint stream could pierce your skin causing serious injury. If an accident happens see detail procedures in the Safety Information section on pages 2-3. See physician immediately and bring this instruction manual.

1. Lock the spray gun.
2. Turn the PRIME/SPRAY knob to PRIME.
3. Turn the power OFF.
4. Unlock the spray gun. Briefly pull the trigger to fully relieve pressure from the system. Lock the spray gun.
2. Load Material

**Start**

**You will need:**
- The material you plan to spray
- Flat blade screwdriver (cart models only)
- Light household oil / Piston Oil™
- Extension cord
- Waste bucket

1. Remove AutoOiler cap with a flat blade screwdriver. Squirt Separating Oil into the AutoOiler. Replace cap.

2. Push AutoOiler button 2-5 times to lubricate the fluid section. Press button 2-3 times before every use. Be sure to check reservoir level (a) and refill as necessary.

3. Squirt a teaspoon of Piston Oil™ (P/N 0516913, sold separately) into the indicated area. Light household oil can be substituted if necessary.

4. Fully depress the Sureflo valve to make sure the inlet ball is free.

5. Place a full container of spraying material underneath the suction tube (a). Hold the return tube into a waste container (b).

6. Turn the pressure control dial to maximum pressure (+). Turn the PRIME/SPRAY knob to PRIME.

7. Plug in the sprayer and move the ON/OFF switch to the ON (l) position. Allow pump to run until you see spray material flowing from the return tube.

8. Switch the pump OFF (O). Place return tube back into material container and clip return tube and suction tube together.
3. Getting Material to Flow

You will need:

- Waste bucket
- Scrap material / cardboard
- Drop cloths to protect floors and furnishings from overspray

Note: Motor will cycle ON and OFF while spraying to regulate pressure. This is normal.

1. Point the spray gun into a separate waste container. Unlock the spray gun trigger. Squeeze and hold trigger for steps 2-3.

2. Turn the power ON. Turn the PRIME/SPRAY knob to SPRAY.

3. Continue to squeeze trigger until the material is flowing freely through the spray gun.

4. Perform the Pressure Relief Procedure, page 7.

5. Thread the spray tip guard assembly onto the gun. Tighten by hand.

6. Rotate spray tip forward to one of the SPRAY positions. Unlock the spray gun trigger.

7. Turn the power ON. Turn the PRIME/SPRAY knob to SPRAY.

8. Point the spray gun at a piece of scrap material/cardboard. Pull the trigger and practice spraying (see pages 10-11).

Note: Motor will cycle ON and OFF while spraying to regulate pressure. This is normal.
4. Practice Spraying

Start

You will need:

- Scrap material / cardboard

Notes:

If the spray pattern becomes distorted or stops completely while the gun is triggered, follow any or all the procedures listed on pages 12-14.

If you plan to be away from your spray project for more than one hour, follow the Short Term Storage instructions on page 15.

If you have difficulty achieving a good spray pattern, your spray tip and gun filter may not be ideal for the type of material you are spraying.

Practice on a piece of scrap material/cardboard

Hold the Spray Gun Level

**CORRECT**

- **Tip:** Trigger gun after starting the stroke. Release the trigger before ending the stroke. The spray gun should be moving when the trigger is pulled and released. Overlap each stroke by about 50%. This will ensure an even coating.

- 10” - 12” (25 - 30 cm)

**INCORRECT**
Spray Technique

**CORRECT**
- Start stroke
- Pull trigger
- Move steadily
- Release trigger
- End stroke

**INCORRECT**
- Flex your wrist as you move in order to keep gun parallel to the surface

Spray Pattern

**GOOD SPRAY PATTERN**
- 8" - 10" (20 - 25 cm)

**BAD SPRAY PATTERN: TAILING**

**CORRECT**
- 50% Overlap

Overlap Your Strokes

See page 12-14
Spraying Troubleshooting - Clear the Spray Tip

Start
You will need:

• Scrap material / cardboard

Do not attempt to unclog or clean the tip with your finger. High pressure fluid can cause injection injury.

1. Lock the spray gun.

2. Rotate spray tip 180 degrees from its current position.

Note: If spray tip is difficult to rotate, relieve pressure by 1) slowly turn PRIME/SPRAY knob to PRIME, 2) unlock the spray gun and 3) squeeze trigger while pointing at scrap material/cardboard. Release trigger, lock the spray gun, and try rotating spray tip again.

3. Make sure the PRIME/SPRAY knob is turned to SPRAY. Unlock the spray gun.

4. Point at a piece of scrap material/cardboard and squeeze trigger until material comes out in a high pressure stream. Release the trigger and lock the spray gun.

5. Rotate spray tip forward to one of the SPRAY positions. Unlock the spray gun and resume spraying.
Spraying Troubleshooting - Clean the Spray Gun Filter

Start You will need:
- Wrench
- Warm, soapy water for latex material
- Mineral spirits for oil based materials
- Replacement spray gun filter (if necessary)

IMPORTANT: Never clean the filter by poking it with a sharp object.

1. Perform the Pressure Relief Procedure, page 7.
2. Pull trigger guard from filter housing.
3. Tighten the wrench over the wrench flats (a). Unscrew the filter housing using a wrench.

Note: You DO NOT need to remove the spray hose from the gun to clean the filter.

4. Remove the filter from the housing. Clean with appropriate cleaning solution (warm, soapy water for latex materials; mineral spirits for oil-based materials).
5. Inspect the filter for damage. Replace if any holes or tears are found.
6. Replace cleaned filter, tapered end first, into the gun housing.

Note: It is important to place tapered end first to ensure proper sprayer operation.

7. Reassemble the spray gun.
Spraying Troubleshooting -
Clean the Inlet Filter

**Start**

**You will need:**
- Warm, soapy water for latex material
- Mineral spirits for oil based materials

**IMPORTANT:** Make sure your floors and furnishings are covered with drop cloths to prevent accidental drips.

1. Unscrew the inlet filter from the fitting on the end of the suction tube.
2. Clean the filter using the appropriate cleaning solution (warm, soapy water for latex materials, mineral spirits for oil-based materials).
3. Replace the cleaned filter by threading it back into the fitting on the end of the suction tube.

**Note:** If after completing all of the steps in *Spraying Troubleshooting* you are still experiencing problems spraying, refer to the Troubleshooting section (page 22).
Short Term Storage

Start

You will need:

- Water
- Plastic bag or bucket
- Rags
- Stir stick

This procedure should be used when taking a short term break or when ending your project for the day. If your break is longer than 16 hours follow Cleanup instructions, page 16.

Instructions are for latex materials only

Note: If using oil based material follow instructions for Cleanup on page 16.

Shutdown

1. Perform the Pressure Relief Procedure, page 7.

2. Place spray gun in plastic bag or immerse into bucket of water.

3. Pour 1/2 cup water slowly on the top of the paint to prevent the paint from drying. Place the entire spraying system out of the sun.

Startup

1. Remove the spray gun from the plastic bag or the water.

2. If water was added during shut down, stir water into material with the stir stick.

Cleanup

You will need:
- A water source that can be delivered with a garden hose (latex materials only)
- Mineral spirits if using oil-based material
- Empty waste container
- A container with warm, soapy water

Cleaning notes - read before cleaning
- When using latex material, clean sprayer and components with warm, soapy water. For oil based material use mineral spirits. Never use mineral spirits with latex materials.
- NEVER use gasoline to clean sprayer.
- Dispose of used cleaning solution properly.
- Thorough cleaning and lubrication of sprayer is important to ensure proper operation after storage.
- If you flush your sprayer with mineral spirits, repeat Cleanup instructions using warm, soapy water.

Follow these steps whenever cleaning with mineral spirits:
- If spraying or cleaning with oil-based materials, the spray gun must be grounded while preparing the spray hose or cleaning.
- Ground the gun by holding it against the edge of a metal container while purging. Failure to do so may lead to a static electric discharge which may cause a fire.
- Always flush spray gun at least one hose length from spray pump.
- If collecting flushed solvent in one gallon metal container, place it into an empty five gallon container, then flush.
- Area must be free from vapors.
- Follow all cleanup instructions.

Cleanup - Latex materials

Follow these steps if you used latex materials and if you have a garden hose available. If you do not have a garden hose available, follow the Cleanup - Oil-Based Materials instructions on page 18.

1. Perform Pressure Relief Procedure (page 7).
2. Remove the spray tip and place into container filled with warm, soapy water.
3. Place the suction tube and return tube into an empty waste container.
4. Using a garden hose, rinse off the suction tube, return tube and inlet filter. Empty the waste container of all fluids.
5. Remove the inlet filter from the suction tube and place it into waste container.

6. Thread pump cleaning adapter onto garden hose. Thread suction tube fitting over the adapter.

7. Unclip the return tube from the suction tube and place it into the waste container. Turn the PRIME/SPRAY knob to PRIME.

8. Turn the water supply to the garden hose on. Turn the pump ON. Water will go into the suction tube and out through the return tube. Let the pump run for a few minutes, and leave pump running for next steps.

9. Point the spray gun at the side of a waste container.

10. While squeezing the trigger, turn the PRIME/SPRAY knob to SPRAY.

11. Continue squeezing the trigger until fluid is coming out clear.

Cleanup - Oil-Based Materials

You will need:
- Mineral spirits if using oil-based material
- Warm, soapy water if using latex material
- Waste container

Follow these steps if you sprayed oil-based materials, or if you sprayed latex materials and do not have a garden hose available. Be sure to use the appropriate cleaning solution for the type of material sprayed.

1. Perform Pressure Relief Procedure (page 7).
2. Remove the spray tip and place into an empty waste container.
3. Submerge suction set into a bucket with the appropriate cleaning solution.
4. Point the spray gun at the side of a waste container.
   Ground the gun against the side of a metal waste container if flushing with mineral spirits.
5. While squeezing the trigger, turn the power ON, and turn the PRIME/SPRAY knob to SPRAY.
6. Continue squeezing the trigger until fluid is coming out clear. You may need to get new cleaning solution.

If you flushed the sprayer with mineral spirits repeat the steps on this page using warm, soapy water.
Cleaning the Spray Gun Components

You will need:

- Soft bristled brush
- Light household oil
- Warm, soapy water if using latex material
- Mineral spirits for oil based material
- Wrench

1. Perform the Pressure Relief Procedure, page 7.

2. Pull trigger guard to separate from filter housing and unscrew housing using a wrench.

   Note: Tighten the wrench over the wrench flats (a).

3. Remove filter from spray gun. Clean spray tip and filter with soft bristled brush and appropriate cleaning solution.

4. Pour a few drops of light household oil inside gun housing.

6. Line up the tabs (b) on the spray tip with the slots in the guard assembly. Slide the tip into the guard.

Long Term Storage

Start

You will need:

- Light household oil / Piston Oil™
- Rags
- Wrench

IMPORTANT: Store the unit indoors with the power cord wrapped around the cord wrap or stand.

1. Remove the suction tube. Using a wrench, remove the spray hose.

2. Fill a cup or other container with two ounces of Piston Lube and submerge the Sureflo Valve (a) into the oil. Light household oil can be substituted.

3. Cover the outlet valve with a rag. Turn power ON and let the pump run for five seconds. Turn power OFF.

4. Replace suction tube.

5. Wipe entire unit, hose, and spray gun to remove accumulated spray material.
Cleaning the Sureflo Valve

You will need:

- Wrench

Cleaning or servicing the Sureflo Valve may be required if the unit has priming problems. Priming problems may be prevented by properly cleaning the sprayer and following the long-term storage steps.

If priming problems persist, you may need to replace the Sureflo Valve assembly. Call Technical Service (1-800-880-0993) to order new Sureflo™ valve assembly.

1. Remove the suction tube.

2. Unscrew the Sureflo Valve assembly (a) from the sprayer. Visually inspect the inside and outside of the Sureflo Valve assembly. Clean any paint residue with the appropriate cleaning solution.

3. Lubricate the O-ring on the Sureflo Valve (b) with petroleum jelly. Replace Sureflo Valve assembly by screwing it into the sprayer. Tighten with the wrench.

4. Replace suction tube and hand-tighten.
## Troubleshooting

### Problem A: The sprayer does not start

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Sprayer is not plugged in</td>
<td>Plug sprayer in</td>
</tr>
<tr>
<td>2. ON/OFF switch is set to OFF</td>
<td>Turn ON/OFF switch to ON</td>
</tr>
<tr>
<td>3. The sprayer shuts off while under pressure</td>
<td>Motor will cycle ON and OFF while spraying to regulate pressure. This is normal.</td>
</tr>
<tr>
<td>4. No voltage is coming from wall plug</td>
<td>Test the power supply voltage</td>
</tr>
<tr>
<td>5. The extension cord is damaged or has too low a capacity</td>
<td>Replace extension cord</td>
</tr>
<tr>
<td>6. There is a problem with sprayer motor</td>
<td>Take sprayer to Wagner Authorized Service Center</td>
</tr>
</tbody>
</table>

### Problem B: The sprayer starts but does not draw material when the PRIME/SPRAY knob is set to PRIME

<table>

### Problem C: The sprayer draws up material but the pressure drops when the gun is triggered (bad spray pattern)

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Pressure too low</td>
<td>Increase the pressure</td>
</tr>
<tr>
<td>2. The spray tip is worn</td>
<td>Replace spray tip with a new one**</td>
</tr>
<tr>
<td>3. The inlet filter is clogged</td>
<td>Refer to Clean the Inlet Filter see page 14</td>
</tr>
<tr>
<td>4. The spray tip is plugged</td>
<td>Refer to Clear the Spray Tip see page 12</td>
</tr>
<tr>
<td>5. The spray gun filter is clogged</td>
<td>Refer Clean the Spray Gun Filter see page 13 Keep extra filters on hand</td>
</tr>
<tr>
<td>6. The material is too heavy or coarse</td>
<td>Thin or strain the material</td>
</tr>
<tr>
<td>7. The Sureflo Valve assembly is damaged or worn</td>
<td>Replace the Sureflo Valve see page 21</td>
</tr>
</tbody>
</table>

### Problem D: The PRIME/SPRAY knob is set to SPRAY and there is flow through the material return tube

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. The PRIME/SPRAY valve is dirty or worn</td>
<td>Take sprayer to Wagner Authorized Service Center</td>
</tr>
</tbody>
</table>
Problem E: The spray gun leaks

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Gun filter housing is loose</td>
<td>Tighten handle</td>
</tr>
<tr>
<td>2. Internal parts of spray gun are worn or dirty</td>
<td>Take sprayer to Wagner Authorized Service Center</td>
</tr>
</tbody>
</table>

Problem F: The spray tip assembly leaks

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. The spray tip was assembled incorrectly</td>
<td>Check tip assembly and assemble properly [see page 19, steps 6-7]</td>
</tr>
<tr>
<td>2. Gun seal is worn</td>
<td>Replace the seal**</td>
</tr>
</tbody>
</table>

Problem G: The spray gun will not spray

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. The spray tip plugged</td>
<td>Refer to Clear the Spray Tip [see page 12]</td>
</tr>
<tr>
<td>2. The spray gun filter is clogged</td>
<td>Refer to Clean the Spray Gun Filter [see page 13], Keep extra filters on hand</td>
</tr>
<tr>
<td>3. The spray tip is in wrong position</td>
<td>Rotate spray tip to one of the spraying positions [see page 12, step 5]</td>
</tr>
<tr>
<td>4. PRIME/SPRAY knob not set on SPRAY</td>
<td>Turn PRIME/SPRAY knob to SPRAY [see page 9]</td>
</tr>
<tr>
<td>5. The material is too thick</td>
<td>Thin material using appropriate thinning solution</td>
</tr>
</tbody>
</table>

Problem H: The spray pattern is poor (tailing)

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Pressure too low</td>
<td>Increase the pressure</td>
</tr>
<tr>
<td>2. The spray tip is plugged</td>
<td>Refer to Clear the Spray Tip [see page 12]</td>
</tr>
<tr>
<td>3. The inlet filter is clogged</td>
<td>Refer to Clean the Inlet Filter [see page 14]</td>
</tr>
<tr>
<td>4. The spray gun filter is clogged</td>
<td>Refer to Clean the Spray Gun Filter [see page 13], Keep extra filters on hand</td>
</tr>
<tr>
<td>5. The spray tip is worn</td>
<td>Replace the spray tip</td>
</tr>
<tr>
<td>6. The material is too thick</td>
<td>Thin material using appropriate thinning solution</td>
</tr>
<tr>
<td>7. Pressure loss</td>
<td>Refer to Causes and Solutions for Problem C</td>
</tr>
</tbody>
</table>

Problem I: The spray tip will not turn

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. High pressure has locked the spray tip in place</td>
<td>Refer to Clear the Spray Tip [see page 12]</td>
</tr>
</tbody>
</table>

** Additional parts are available for this procedure. Refer to the Parts List (page 74) section of this manual for a list of the parts and their part numbers

Daily Maintenance

The only daily maintenance necessary is thorough cleaning. Follow the cleaning procedures in this manual.

Extended Maintenance

Some pump parts eventually wear out from use and must be replaced. The following is a list of available repair kits. Pump performance is the only reliable indicator of when to replace wear parts. Refer to the Troubleshooting section for more information on when to use these kits.

Limited Warranty

AIRLESS PAINT SPRAY EQUIPMENT

This product, manufactured by Wagner Spray Tech (Wagner), is warranted to the original retail purchaser against defects in material and workmanship for:

two years from date of purchase.

This warranty does not cover damage resulting from improper use, accidents, user’s negligence or normal wear. This warranty does not cover any defects or damages caused by service or repair performed by anyone other than a Wagner Authorized Service Center. This warranty does not apply to accessories.

WAGNER SHALL NOT IN ANY EVENT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND, WHETHER FROM BREACH OF THIS WARRANTY OR ANY OTHER REASON.

If any product is defective in material and/or workmanship during the applicable warranty period, please call Wagner Technical Service at 1-800-880-0993. DO NOT RETURN THE PRODUCT TO THE ORIGINAL RETAILER. Under Wagner’s Free Tool Replacement Program, Wagner Technical Service will either replace the defective part, or refer you to your nearest Authorized Service Center for repair.

SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS OR THE EXCLUSION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION AND EXCLUSION MAY NOT APPLY TO YOU.

THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.
