Successful Organizations have

World-Class Risk Management

Sword Active Risk

It's time for
Active Risk Manager
Successful Organizations have
World-Class Risk Management
Whether your risk management strategy is based on instinct, experience or a formal methodology, the real question is this:

Are you getting competitive advantage from risk management?

Today’s organizations are more complex than ever before. As business complexity increases, so does your exposure to risk. An effective Enterprise Risk Management (ERM) solution helps to transform your organization and empowers you to tackle your risk potential head-on - proactively identifying, understanding and managing your risk for sustainable, long-term growth. Active Risk Manager delivers the leading software solution that addresses risk management needs at all levels of the business, from individual projects up through business units to enterprise level.

Increase business performance with
Active Risk Manager

Increased Business Complexity Means Increased Risk Exposure

In today’s global organizations, the potential cost of economic instability, business interruptions, regulatory and compliance changes, strategic initiative and project failure are at the forefront of every executive’s mind. Success is determined by how organizations manage the certainty of their business plan.

Significant evidence exists that the most successful organizations also have world-class risk management capabilities. If your organization is like most, your current risk management process has probably evolved over time, representing a consolidation of many disparate processes and instinctive, experiential efforts supported by spreadsheets and home-grown technologies. For many, risk management is dominated by inconsistent manual processes, segmented and unreliable information and the lack of real-time access to consolidated risk information across the business.
ARM Makes Risk Management Simple, Valuable and Personal

Active Risk Manager™ (ARM) is the world’s leading Enterprise Risk Management (ERM) software package. ARM is recognized by independent analysts as having “the most extensive range of ERM capabilities currently available”. Unlike traditional, compliance-focused “GRC” solutions, ARM delivers far more value and capability to its users. With its robust and unique integrated approach, ARM is the only ERM solution that addresses the risk management needs of all parts of the business – from an individual department to the organization as a whole. From managing project and program risk to strategic business planning, ARM helps organizations identify, analyze, control, monitor, mitigate and report on risk across the enterprise.

Unlike stand-alone, spreadsheet-based risk management solutions, ARM provides a simple, secure, centralized, web-based system that meets the risk management needs of an individual department and the organization as a whole. Because ARM was built to be simple and easy to use, it accelerates the adoption of consistent risk management processes across operations and projects. ARM drives value by providing a complete and integrated ERM system that ensures greater visibility of critical risks, reduces surprises and provides a complete audit trail across the enterprise.

ARM provides top-down, bottom-up and cross-organizational views of risks, issues and opportunities. ARM delivers a holistic view of risk across the enterprise, supporting both the operational needs of the business and the increasing board-level demand to perform risk-adjusted strategic planning and performance management.

Crossrail is managing Europe’s largest infrastructure project — building a new railway beneath Central London. Effective Enterprise Risk Management is critical to its success.

“[Crossrail] realized that we needed a consistent approach to managing risk across the program. A key part of getting that consistent approach was to implement a common risk management system. We went through a competitive procurement process and we selected ARM. We have now implemented ARM within our own organization and mandated its use across our supply chain to our major tier one contracting organizations... ARM has been able to drive consistency across this enormous program.”

Rob Halstead, Head of Risk Management, Crossrail Limited

With ARM, Crossrail gained a portfolio-wide risk visibility, ensuring that all the various project management teams understand their risks, and can take steps to mitigate them.
“Companies in the top 20% of risk maturity generated three times the level of EBITDA as those in the bottom 20%.”

Ernst & Young, Turning Risk into Results

Every business is different, so ARM is designed to be flexible and configurable. Whether your organization supports risk management standards defined by the PMBOK, ISO 31000, COSO, FERMA or Solvency II, you’ll find ARM to be easily configured to support your unique requirements. With unmatched flexibility, ARM delivers the industry’s best value by shortening the cycle time of many risk management processes. ARM makes risk management personal by distributing risk management responsibility across your enterprise. This increases personal engagement from everyone in your organization, leading to more accurate and timely risk reporting, and more successful risk mitigation.

Whether your goal is on-time, on-budget project delivery, enterprise-wide transparency, compliance or competitive advantage — ARM is the trusted choice of best-in-class organizations.

ARM’s Risk Register centralizes and simplifies top-down, bottom-up and cross organizational risks, issues, incidents and opportunities. Its functionality lets you record, score, assess and mitigate risks at all levels in your business via a single, secure and auditable system.
Active Risk Manager offers a complete ERM solution with modules that ensue your entire organization benefits from the investment in risk management

**ARM Performance Manager (RPM)**

Provides the easiest way for organizations to create dashboards and reports, including automatically generated tables, matrices, charts and dashboards, without the need for specialized IT developer or software vendor resources. ARM RPM includes access to proven report templates and valuable educational resources. It connects you to an online community of risk professionals to access shared experiences and exchange report templates with other organizations. ARM RPM is one of the best ways to demonstrate a return on investment from your risk management program. ARM RPM allows organizations to visualize data and take informed decisions based on the information provided.
ARM Desktop (Core)

The expert users interface. Designed to facilitate the top down / bottom up risk process across the entire organization including configuration of the risk process(es) being supported, qualitative and quantitative analysis, slicing and dicing of information and the robust information linking to support the integration of ARM’s Risk, Incident and Assurance functionality across multiple context dimensions (processes, projects, assets, accounts, organization, compliance mandates and goals and objectives).

ARM Risk Connectivity

Helps you identify the critical risks that have a cascading impact on your business. ARM Risk Connectivity visualizes complex risk and opportunity relationships in a simple and easy to understand way. It creates a visual map and uncovers the interconnections between risks. It identifies the most significant risk centers and where to introduce “fire breaks” that minimize the effect of risk cascades that can stem from a seemingly minor risk occurrence.

ARM Apps

Enable operational users to access simple web applications via your browser and mobile devices to complete specific tasks. The range of ARM Apps provides easy access to risk, incident and assurance process that are simple to use and cost-effective way to involve more people in the risk process, so that the organization has the most complete picture of risks and opportunities across the business.

ARM Risk Express

Highly intuitive mobile capable user interface for business users who are comfortable using Excel and require a simplistic interface to update risks, assessments and mitigations.

ARM Unplugged

Provides a familiar spreadsheet-style method for capturing all types of risk and opportunity information when off-line. Through simple two-way synchronization with your corporate ARM risk system, ARM Unplugged ensures data integrity and delivers the complete view of risk exposure for management. ARM Unplugged is designed for use offline – at a meeting, on the road or when you are running a workshop at a remote location. Its ease-of-use will help drive adoption of a common risk process that removes the risk silos keeping risk information fragmented.
Active Risk Manager is the Award-Winning Enterprise Risk Management Software that delivers the comprehensive features you need to be successful
