**Technique:**
- **Stringer or Weave Bead:** *Stringer and Weave Bead*
- **Initial/Interpass Cleaning:** *Wire Brush, Grinding*
- **Number of Electrodes:** Single
- **Electrodes Spacing:**
  - Longitudinal: N/A
  - Lateral: N/A
  - Angle: N/A

**Contact Tube to Work Distance:** N/A
**Peening:** *Not Required*

**Heat Treatment:**
- **Preheat Temp. Min °C (°F):** 150 °C
- **Interpass Temp. Min/Max °C (°F):** 150 °C
- **Postweld Heat Treatment:** Temp. °C (°F): 600 to 620 °C
  Time: 1 Hour per in.

**Additional Notes:**
See Postweld Heat Treatment (PWHT) Specification No. PWHT-SMAW-01

### Manufacturer/ Contractor
**Welding Engineer:**

Name: *Jim Clark*  
Title: *Welding Engineer*  
Date: *12,12,2005*

**Authorized by:**

Name: *John Smith*  
Title: *QA Manager*  
Date: *12,13, 2005*
Heat Treatment (AWS Code’s Guideline):

PREHEAT TABLE:
AWS D1.1, Table 3.2 Prequalified Minimum Preheat and Interpass Temperature °F (°C):
Thickness 3 to 20 mm (1/8 to 3/4 in.) incl.: 32°F (0°C)
Over 20 thru 38 mm (3/4 to 1-1/2 in.) incl.: 50°F (10°C)
Over 38 thru 65 mm (1-1/2 to 2-1/2 in.) incl.: 150°F (65°C)
Over 65 mm (2-1/2 in): 225°F (110°C)
For SMAW process, above preheat data is with low hydrogen electrodes.
When the base metal temperature is below 32°F (0°C), preheated to a minimum of 70°F (20°C)
Preheat and interpass temperature shall be sufficient to prevent cold cracking.
Guideline on Alternative Methods for Determining Preheat/Interpass: See Annex XI of AWS D1.1

POSTWELD HEAT TREATMENT:
PWHT requirements shall be based on Welding Procedure Specification (WPS).
AWS D1.1, 5.8 Stress-Relief Heat Treatment: Where required by the contract
drawings or specifications, welded assemblies shall be stress relieved by heat treating.
(See AWS D1.1, 5.8.1, Requirements for stress-relief treatment;
Table 5.2, Minimum Holding Time; Table 5.3, Alternate Stress-Relief Heat Treatment)
See AWS D1.1, 5.8.3, Steels Not Recommended for PWHT

PQR Qualified Range (AWS Code’s Guideline):
Qualified Position: F (CJP/PJP Groove, Fillet) on Plate, Pipe, Box Tube (Table 4.1 AWS D1.1)
Qualified Thicknesses (CJP Groove): 1/8 in. (3 mm) Min., Unlimited
Plus any size of fillet or PJP groove weld for any thicknesses or diameter (Table 4.2 AWS D1.1)
WPS Base Metal Group Allowed by PQR: Any Steels in Group I to Any Steels in Group I of Table 3.1 of
AWS D1.1 (Table 4.8 AWS D1.1)
Qualified WPS Filler Metal Allowed by PQR: For SMAW process, only same electrode type (change from
low hydrogen to non-low hydrogen is not allowed) and same flux-electrode classification for SAW process.
Also same (or lower) strength electrode tested in PQR for SMAW, GMAW and FCAW processes. [No
increase in diameter from size tested in PQR is allowed, except that an increase on electrode size of only 1/32
in. (0.8 mm) in SMAW and increase up to 1/16 in. (1.6 mm) in GTAW is acceptable for use in WPS. For
GMAW, only same electrode diameter size tested in PQR is allowed in WPS (Table 4.5 AWS D1.1).]

## Test Results

### TENSILE TEST

<table>
<thead>
<tr>
<th>Specimen No.</th>

### VISUAL INSPECTION:
- Appearance: Good appearance
- Undercut: No
- Piping porosity: No
- Convexity: Acceptable

Test Date: 11,11, 2005
Witnessed By: Jim Clark

Other Tests (Notes):
- Radiographic-ultrasonic examination:
  - RT report no: 1230-RT Result: O.K.
  - UT report no: 2310-UT Result: O.K.

### FILLET WELD TEST RESULTS:
- Max. size single pass: N/A
- Min. size multiple pass: N/A

### All-weld-metal tension test:
- Tensile strength, MPa (psi): N/A
- Yield point/strength, MPa (psi): _
- Elongation in 2 in., %: _
- Laboratory test no.: _

Welder’s name: Welder Guy
Tests conducted by: Quality Weld Lab, Inc.
Laboratory Tests Number: TN-46547

Clock No.: 123-12-1234  Stamp No.: JS-02

We, the undersigned, certify that the statements in this record are correct and that the test welds were prepared, welded, and tested in conformance with the requirements of Section 4 of AWS D1.1, (Year:2004) Structural Welding Code Steel.
