Praise for The Power of Zero

“I’ve always advised that taxes will be higher in the future, but was never able to articulate ‘why’ or deliver that message in a powerful way. McKnight’s book is the most compelling case for this I’ve ever seen. If you’re dumping money into a 401(k) or IRA, you need to read this book today.”

—Dave Cox, The Producers Group, Bryant, AR

“David is a retirement visionary. His insights are clear and concise and his action plan to remove the IRS from your retirement picture is irrefutable!”

—Rick White, American Planning Group, Inc., Raleigh, NC

“The Power of Zero offers proven strategies to dampen Uncle Sam’s impact on your retirement. It’s a must read for those who want to take the IRS wild card out of the deck!”

—Steve Parker, CPA, MBA, Steve Parker & Associates, LLC, Orland Park, IL

“The concepts and strategies in this book have proven indispensable in getting my clients to the 0% tax bracket in retirement. Well worth the read!”

—Mark Cupp, Sr., LUTCF, Cupp Wealth Strategies, Santa Clara, CA

“The principles in The Power of Zero have empowered me to sound the alarm and rescue my clients’ financial future and security from the looming threat of higher taxes.”

—James “Jamie” Farrell, FX3 Safe Retirement Planning, Huntersville, NC

“Meeting David and reading The Power of Zero has completely changed my practice and refocused my planning for my clients. Thank you, David.”

—Patrick Smith, Bering Financial, Arlington, TX
“The strategies behind The Power of Zero have revolutionized my approach to finance, and my clients are the better for it.”

—Dan Hawtree, CPA, Hawtree & Associates, Monee, IL

“David’s passion for designing creative solutions for his clients is unparalleled in the industry. His book provides specific insight on why it’s important to reduce your income taxes and pursue the 0% tax bracket. It is a must read for financial professionals and their clients everywhere.”

—Shawn Sigler, Financial Independence Group, Cornelius, NC

“The Power of Zero is right on at the right time. U.S. taxes are poised to rise dramatically. The math is clear and surprisingly simple. Consumers and advisors need to know and this book tells the story.”

—Clark S. Gardner, MCAP Financial Group, Orem, UT

“Essential reading for anyone who wants even the slightest measure of command over their future finances. Far and away the most up to date strategies for anyone wanting to retire. Without these techniques, investors are at the mercy of circumstances beyond their control.”

—Navi Dowty, CFA, Navi Dowty & Associates, Inc., Wheaton, IL

“David has an incredible grasp of our country's current economic condition. The Power of Zero clearly outlines a way to introduce more certainty into my clients’ financial future. Thank you Dave!”

—William E. Spar, M.A., LUTCF, Advanced Retirement Planning, LLC, Phoenix, AZ

“Like it or not, taxes are likely to rise and McKnight’s proposal that we reposition our assets now so as to avoid higher taxes in the future could not be more timely.”

—Greg Gillis, CFP®, Little Rock, AK
“The Power of Zero is a must read for anyone who is serious about maximizing income in retirement. We use the strategies outlined in David’s book daily to help our clients become as tax-efficient as possible.”

—W. Ray Stagner, ChFC, CLU, Fidler Wealth Management, Tulsa, OK

“David McKnight is truly a pioneer in our industry! The Power of Zero has helped me educate and prepare my clients to reposition their taxable and tax-deferred assets to tax-free, through a balanced array of tax-free strategies.”

—Brian Hanson, Hanson Wealth Management, Eden Prairie, MN

“I have known David McKnight for many years and he is a true visionary. This book will guide retirees through the coming tax crisis by helping them take advantage of the power of the 0% tax bracket.”

—Tommy Wolfe Currid, LUTCF, Niceville, FL

“David McKnight is light years ahead of the financial planning industry. Make sure you and your advisor read this book! You owe it to yourself and your family.”

—Brian Byars, Advanced Retirement Planning, Atlanta, GA

“With all the economic uncertainty, The Power of Zero gives our clients a roadmap to greater predictability, control and peace of mind in retirement.”

—Hal D. Allen, CPA, MAcc, Allred Jackson, North Logan, UT

“Dave’s ideas and strategies have radically redefined the way we look at retirement taxation for our clients. The Power of Zero lays out a clear and concise roadmap for anyone looking to shield their hard-earned assets from the impact of higher taxes.”

—Mike Abbott and Chris Bennett, AbbottBennett Group, Concord, NH

“Talking to our clients about the strategies in this book has transformed their retirement and protected them from the tax train wreck that is just around the corner.”

—Chris Herkert, Herkert & Associates, Bellingham, WA
“The Power of Zero by David McKnight offers compelling strategies to safeguard your retirement income in a future where we will likely see much higher tax rates.”

—Donald Gladhart, CLU, ChFC, Wathena, KS

“David has distilled the tax-efficient retirement paradigm into a single, powerful book. I’ve been in this business for 30 years, and this message couldn’t be more timely. Thanks David!”

—Craig Jergenson, CFP®, CoachCraig Financial, Coon Rapids, MN

“The answer to the problem of higher tax rates is to plan for a tax-free retirement, and McKnight does a great job of laying out strategies that are available to just about anyone.”

—Steve Smith, Pilot Financial Advisors, Salisbury, MD

“Although my clients are well prepared for retirement, they haven’t planned for the devastating effect of taxation on their Social Security. Thank you David for writing this book and raising the warning cry!”

—Jason Redditt, Advanced Retirement Solutions, Little Rock, AR

“David makes a very convincing argument that retirement is a lot more doable at the 0% tax bracket. The expert advice he provides on how to get there is worth the time it takes to read and implement!”

—Earl R. Eastman, Providence Educational Institute, San Diego, CA

“David has done a remarkable job of explaining how everyone, with just a little bit of proactive planning, can insulate themselves from the threat of higher taxes by creating a totally tax-free retirement. This is a must read for anyone interested in maximizing their wealth.”

—Ike Ikokwu, CFP®, CPA, Atlanta, GA
How to Get to the 0% Tax Bracket and Transform Your Retirement

Taxes will be increasing. This book is a wake-up call to reality. For the past 20 years, I have been warning both consumers and advisors that the writing is on the wall and the day of reckoning is upon us. This is not a prediction but a result of plain arithmetic.

Our government will soon need huge cash infusions to meet its commitments and it will have no choice but to raise taxes on those of us who have worked hard, sacrificed, saved, and played by the rules. We were told to put money away for retirement in tax-deferred accounts like 401(k)s and IRAs, and many of us did.

Those who saved the most diligently, though, will soon realize that a substantial chunk of those tax-deferred retirement savings are sitting ducks for a revenue-hungry Uncle Sam. In fact, as your 401(k) or IRA funds grow, so does the government’s share since it is a partner on your savings. But unlike a traditional business partner, Uncle Sam can increase his partnership percentage of your tax-deferred savings whenever he needs more money, and that day is coming soon.

The question is then, “Are you prepared?” You can be, but, unfortunately for most people, the answer is “no” because they believe that there is no way this can happen to them. But it can and it will. We have had federal income tax rates exceeding 90%. In fact, from 1936 to 1981, the top federal income tax rate has never gone below 70%! Higher taxes mean less money for your retirement years.

Even if you think you are prepared with a plan, it is unlikely that you are. In fact, in most cases I see, the kind of planning you need to do now to avoid the oncoming tax disaster train is not being done.

If you have to wonder if you have a plan to reduce your income taxes now and in the future, then you do not have a plan. If you don’t have a
plan, you will end up with what I call “The Government Plan.” As you can imagine, that is not the plan that is best for you.

The plan that you need must be implemented by you and be done as soon as possible, before the tax train wreck arrives. You need to create a plan to move your tax-deferred funds from accounts that are forever being taxed to accounts that are never taxed. Your best defense is offense—to build tax-free savings.

The good news is that right now we are in the lowest tax rates in recent history. Now is the time to strike in order to create tax-free income for your retirement years and beyond. Even your loved ones can benefit from the planning you do now. The tax code actually includes several tax moves you can make to create tax-free retirement income but few people take advantage of them. For example, Roth IRAs and life insurance alone can help you and your family end up with more money than you have now, and with more of it tax-free.

There will never be a more cost-effective time to leverage your current assets into tax-free assets. As you move your tax-deferred funds to tax-free territory, you reduce the impact of future tax hikes on your retirement savings.

In this book, David McKnight (who, like me, also loves “tax-free”), provides you with a road map of how to get to the 0% tax bracket, virtually eliminating the tax risk, which, if not addressed, will easily consume a solid portion of your retirement savings.

It’s time to face reality. Taxes will increase, and tax-deferred accounts like 401(k)s and IRAs are the low-hanging fruit waiting to be picked by Uncle Sam. Follow the steps in this book and you’ll keep your hard-earned retirement savings out of Uncle Sam’s reach.

I love tax-free, and you will too.

Tax-free is always better! Pay less and keep more.

—Ed Slott, CPA

Author and Founder www.irahelp.com & www.theSLOTTreport.com
Founder, Ed Slott’s Elite IRA Advisor Group, August 12, 2013
I’ve had the good fortune of being mentored by some of the giants in the financial services industry over the last 16 years. It would be impossible to create a book such as this without being able to stand on the shoulders of the great people who helped make me who I am today.

One of the great mentors of my life was Dick Mack. He plucked me out of obscurity and made me believe I could amount to something great. He had a penchant for turning a phrase and, even today, I find his words and stories rolling off my tongue in everyday conversation. He was a great believer in analogies and metaphors and used them to boil down complex concepts into simple ones. I’m still waiting for a compendium of his Dick Mack–isms to show up on the New York Times Best Seller list. He also taught me to think outside the box and find creative solutions to difficult problems. His legacy lives on through hundreds of others whose lives he continues to touch.

A special thanks also goes out to longtime colleague and mentor, Michael Minnoch, whose tax expertise helped inform a lot of my out of the box thinking on tax planning from a very early stage in my career. Michael is a true pioneer in this industry and I am proud to stand on his shoulders.

I extend my heartfelt thanks to the amazing team at Acanthus Publishing who helped with the editing, charts and layout for this book. A big thanks goes to Paige Stover for her leadership and vision throughout the entire process. My gratitude also goes out to George Kasparian and his team—David Kennedy, Ian Nichols, Morgan Rosenberg, Samantha Fahey, Andrea Weidknecht, and Timesha Livingston—who worked closely with me on the editing process and did the research behind the footnotes you see throughout the book. George and his team were kind enough to put up with my nitpicking
over stylistic issues and my tendency toward compulsive and serial revising.

Finally, none of this would be possible or worthwhile without my wife, Felice. She does the heavy lifting of running our household and mothering our six amazing children. As hard as I work, I’ll never work as hard as she does inside the walls of our home. Felice puts up with my long hours and road trips with grace and patience. I owe the best 13 years of my life to her unfailing companionship.

—David McKnight
Grafton, WI
July 31, 2013
O
n January 11, 2011, a CPA named David M. Walker appeared on national radio and made a grim prognostication: Based on the current fiscal path, future tax rates will have to double or our country could go bankrupt. He then challenged the national listening audience to come up with a four-letter word that would explain why. The calls came pouring in. “Debt?” came one answer. “Wars?” came another. “Kids?” came the next. After a few more wayward guesses, David Walker finally revealed the answer. “It’s math.”

Who is David Walker, and what does math have to do with the future of our country? For an 11-year period starting in 1998, David Walker served as the Comptroller General of the United States and as the head of the Government Accountability Office. In short, he was the CPA of the USA, and the nation’s chief auditor. Having performed in that capacity during both the Clinton and Bush administrations, he knows more
about our country’s fiscal state than perhaps anyone else on the planet. Since his resignation in 2008, Walker has been crisscrossing the country, raising the warning cry, and discussing sensible solutions with anyone who will listen.

To understand the urgency behind David Walker’s mission, you need look no further than the mathematical realities facing Social Security. The Social Security Act was passed into law in 1935 as the lynchpin of Roosevelt’s “New Deal” with America. When it was first implemented, the math behind it (based on expected birth rates and life expectancies) ensured its financial viability into perpetuity. There were an astounding 42 workers putting money into Social Security for every one person who took money out. Ironically, the official retirement age at that time was 65, well beyond the then average life expectancy of only 62. The program’s administrators didn’t even anticipate that the average American would live long enough to ever draw on Social Security. If you did make it to 65, you drew on Social Security for only a few years until you died! You see,

![Workers to Retiree Ratios, Selected Years 1960 to 2060](image)

Source: Board of Trustees (2006, Table IV.B2). Projected using the intermediate assumptions in the 2006 annual report of the Board of Trustees of the Federal Old-Age and Survivors Insurance Trust Funds.

Due to a demographic glitch known as the “Baby Boomers,” the workers-to-retiree ratio continues to drop, jeopardizing the solvency of Social Security and other entitlement programs.
Social Security was never intended to be a retirement program. It was merely insurance against living too long.

But then, something happened that would change Social Security forever. Soldiers came home from World War II and started to do something at a rate at which they’d never done before. They started making babies! Great, you may be thinking. More babies equal more workers, which mean more contributions to the Social Security program. That would be true if these “Baby Boomers” had decided to have nearly as many children as their parents did, but they didn’t. They had 32 million fewer children. And this is where the math to which David Walker refers catches up with us.

Today, there are no longer 42 people contributing to Social Security for every one person who takes money out of the program. The ratio has fallen to 3 to 1.1 And in another 10 years, it’s going to be closer to 2 to 1. Compounding the problem, Americans can now draw Social Security as early as 62 and, due to advancements in science and medical technology, retirees are living longer than ever. The reality is, if you start drawing on Social Security at 62, you’ll keep drawing it, on average, until age 85. In fact, octogenarians are the fastest-growing segment of our population!

The problem is, Social Security went from being insurance against living too long to an expensive retirement program that Americans rely upon for nearly a quarter of their lives! As of 2012, the Social Security program costs the government over $700 billion per year, or about 20% of the federal budget.2 And the consequences for the United States couldn’t be more devastating.

“A promise made is a debt unpaid”
—Robert A. Service

The math behind the Social Security problem is emblematic of a much broader crisis facing our nation. Over the years, our elected officials have

---

increasingly made promises, like Social Security benefits, without any thought for how they were going to pay for them. David Walker calls these promises “unfunded obligations.” The greatest of these unfunded obligations is the universal healthcare system for seniors implemented as part of Lyndon Johnson’s “Great Society” domestic programs of the 1960’s: Medicare. Medicare suffers from the same demographic challenges as Social Security. As of 2012, it costs the government over $500 billion per year, and these costs continue to spiral out of control. According to Walker, the fiscal strain of these two programs alone could bankrupt the United States of America.

A closer look at the numbers explains why David Walker has become so alarmed. To quantify the actual cost of these unfunded liabilities, the government employs its own unique (and creative) accounting method. Instead of telling us the actual cost of a program, they express the cost as the present value of a future obligation. For example, the government

```
H1 Financial Status

Figure II.E1.-HI Trust Fund Balance at Beginning of Year as a Percentage of Annual Expenditures.

According to the Medicare Trustees Report for 2012, Medicare is running a deficit and has started to dip into the trust fund accumulated over previous years. The graph above displays the Federal Hospital Insurance Trust Fund balance at the beginning of each year as a percentage of annual expenditures on the Y-axis and time in years (both historical and future) on the X-axis. These projections indicate that the trust fund will be depleted by 2025.
```
tells us that the cost of Social Security and Medicare is $42 trillion. What this really means is that we would have to have $42 trillion sitting in an account today, earning treasury rates, to be able to afford these programs. But the government doesn’t actually have $42 trillion today, and if you look beyond 75 years, the real cost is much greater. All told, some experts put the actual cost over time at much closer to $120 trillion.

Present Value: To better understand this concept, let’s look at the following example. Suppose you believe that your car will need to be replaced in 10 years. You estimate that in 10 years a new car will cost you $20,000. So, you ask yourself what amount of money would have to be invested today at a reasonable rate of growth (say 5%) to be able to have $20,000 10 years from now. A quick calculation shows that $12,892 growing at 5% over that time period will give you $20,000 in 10 years’ time. In other words, the present value of the future cost of your car is only $12,892!

Let’s look at the math behind our country’s fiscal problems from a different angle. The United States currently spends roughly 76 cents of every tax dollar it brings in on four items: Social Security, Medicare, Medicaid, and interest on the National Debt. Absent any action on the

Percent of Every Tax Dollar Spent on Social Security, Medicare, Medicaid, and Interest on the National Debt

![Pie chart showing percent of every tax dollar spent on Social Security, Medicare, Medicaid, and interest on the National Debt.]

2012 - 76%
2020 (projected) - 92%

Source: Center on Budget and Policy Priorities, CNNMoney

part of Congress, however, the percentage of the government’s revenue required to pay for these four big ticket items could balloon to 92 cents of every tax dollar by the year 2020.\(^4\) As these four expenses grow and compound, they begin to crowd out all other government expenditures.

Here are just some of the programs the government would have to pay for with the remaining 8 cents: Child Nutrition Programs, Homeland Security, Food Safety and Inspection Service, U.S. Forest Service, Drug Enforcement Administration, Public Housing Program, Animal and Plant Health Inspection Service, Bureau of Indian Affairs, Army, National Endowment for the Arts, Air Force, Rural Development, Coast Guard, Supplemental Nutrition Assistance Program (aka food stamps), National Park Service, Department of Family Services, U.S. Geological Survey, Environmental Protection Agency, Centers for Disease Control and Prevention, Immigration and Customs Enforcement, Secret Service, Supportive Housing for the Elderly Program, Federal Railroad Administration, Navy, Bureau of Land Management, Peace Corps, State Department, National Science Foundation, Congress, Fish and Wildlife Service, White House, Smithsonian Institute, Small Business Administration, Federal Highway Administration, disaster relief, federal courts, federal student loans, federal pensions, income assistance, IRS, NASA, FEMA, FAA, FCC, SEC, FBI…

And the list goes on. Can you see why David Walker and a growing contingent of economists are so concerned?

\[\text{But Surely Taxes Could Never Double!}\]

The mathematical reality is that, absent any spending cuts, tax rates would have to double. \textit{Come on, let’s get serious}, you must be saying to yourself. \textit{Could tax rates really double?}

A study of the history of taxes in the United States lends a bit of perspective. Over the last 100 years, tax rates in our country have been

nothing short of a rollercoaster ride. When the government first began dipping its toe in the waters of income taxation back in 1913, it seemed harmless enough. In fact, the very first federal income tax rate was only 1%. But soon the thrill of income taxation became so addicting that the government got hooked.

By the time 1943 rolled around, the highest marginal tax bracket in our country had skyrocketed to 94%. These exorbitant rates were levied on any portion of your income that exceeded $200,000.

But did anyone really make that type of money back then? Actually, there was one person with whom you may be familiar. He was an actor who later became a politician. His name was Ronald Reagan. If you look at Reagan’s filmography, you’ll find that he never made more than two full-length movies in a year. You see, he made about $100,000 per movie, and, for anything he made above and beyond $200,000, he only kept 6 cents on the dollar. Truth be told, he didn’t even get to

![Top Marginal Tax Rates](image-url)

*Source: Eugene Steuerle, The Urban Institute; Joseph Pechman, Federal Tax Policy; Joint Committee on taxation, Summary of Conference Agreement on the Jobs and Growth Tax Relief Reconciliation Act of 2003, JCX-54-03, May 22, 2003; IRS Revised Tax Rate Schedules*
keep that—it went off to the State of California for state tax. So, if you study the life of Reagan, you’ll find that he never worked more than six months out of the year. Mathematically, it just didn’t make sense.

By the ’70s, things had improved, but not by much. Americans were still paying an astounding 70% on anything they made above and beyond $200,000.

Fast forward to today. The top marginal rate at which the wealthiest Americans pay taxes is a mere 39.6%. How does 39.6% stack up against some of the tax rates in the past? You could make the case that taxes haven’t been this low in nearly 80 years! This is interesting because I routinely ask rooms full of people across the country, “How bad are taxes today?” And you know what they tell me? “As bad as they’ve ever been!” Truth is, taxes today are just about as good as they’ve ever been! The real question is, how long can these low rates last?

According to the Congressional Budget Office, if Social Security, Medicare, and Medicaid go unchanged, the rate for the lowest tax bracket would increase from 10% to 25%, the current 25% bracket would rise to 63%, and the highest bracket would go from 35% to 88%.

For you skeptics out there, let me take you back in time. From 1960 to 1963, the lowest marginal tax rate was 20%, the middle bracket was 69%, and the highest marginal tax rate was an astounding 91%! Folks, this is a path we’ve been down before. What’s that old adage? Those who don’t study history are destined to repeat it?

A few years ago I was watching the Roadrunner with my kids. In this particular episode, Wile E. Coyote was up to his usual tactics in trying to subdue the Roadrunner. He was building a bomb—made by Acme, of course—inside a shed also made by Acme. The Coyote was so intent upon completing the bomb that he didn’t realize that the Roadrunner had pushed his shed onto a train track. What’s worse, he didn’t realize until the very last moment that a huge freight train was bearing down on him.

Now, if you found yourself on a track with a huge train bearing down on you, what would you do? You’d jump off, right? Well, when the Coyote saw the huge freight train approaching, he didn’t jump out of the way. He simply pulled down the window shade, thinking that the act of doing so would make the problem go away. Did the problem go away? Of course not. There was a huge explosion and, let’s face it…does the Coyote ever die? No, but as the smoke cleared, we could see the Coyote limping away from the wreckage, very much the worse for wear.

*What possible application could a Roadrunner episode have to my financial life?* you must surely be thinking. Well, as Americans who have grown accustomed to investing in tax-deferred accounts such as 401(k)s and IRAs, we find ourselves standing on the tracks with a very real train bearing down on us, and it’s coming in the form of higher taxes. Now, given this reality, we have a couple of options. We can pretend like the problem doesn’t exist and simply pull down the window shade. Or, we can implement some proven strategies that can help remove us from the train tracks.

The purpose of this book is to share with you the proven strategies that will help you get off the train tracks and insulate your money from the impact of higher taxes down the road. Which brings me to the title of this book: *The Power of Zero*. You see, the only real way to protect yourself from the impact of rising taxes is to adopt a strategy that puts you in the 0% tax bracket in retirement. Why is the 0% tax bracket so powerful? Because of that same four letter word: math. If you’re at the 0% tax bracket and tax rates double, two times zero is still zero! By implementing these concepts before tax rates rise, you can effectively remove yourself from the train tracks and protect your hard-earned retirement savings from the gathering storm that’s looming on our country’s horizon.
