</table>

Hysol® 9461™ is a thixotropic, two component epoxy adhesive formulated for ease of use as well for a good balance of properties. This adhesive couples high peel strength and excellent shear strength in a smooth, non-sag paste that is easily dispensed. The product has a medium working life with a quick heat cure response if required. The tough nature of this structural adhesive makes it useful for bonding dissimilar substrates including metals, engineering thermoplastics and thermoset laminates such as sheet moulding compound (SMC).

TYPICAL PROPERTIES OF UNCURED MATERIAL

Resin Properties
Specific Gravity @ 25 °C 1.35
Viscosity, DIN 54453, mPa·s (cP):
  Shear rate 10 s⁻¹ 85,980
  Shear rate 50 s⁻¹ 38,570
Thixotropic Index 2.8
Flash Point - See MSDS

Hardener Properties
Specific Gravity @ 25 °C 1.31
Viscosity, DIN 54453, mPa·s (cP):
  Shear rate 10 s⁻¹ 59,530
  Shear rate 50 s⁻¹ 42,860
Thixotropic Index 2
Flash Point - See MSDS

Mixed Properties
Pot Life @ 22 °C, minutes: 100 g mass 40

TYPICAL CURING PERFORMANCE

 Fixture Time
Fixture time is defined as the time to develop a shear strength of 0.1 N/mm².
 Fixture Time, mixed, @ 22 °C, minutes 240

Cure Speed vs. Time/Temperature
Hysol® 9461™ will achieve handling strength in 4 to 5 hours at room temperature (note: this can vary with different bond configurations and ambient temperatures). Elevated temperatures may be used to accelerate the cure. The graph below shows the shear strength developed with time on grit blasted steel lap shears at different temperatures and tested according to ISO 4587.

TYPICAL PERFORMANCE OF CURED MATERIAL

Adhesive Properties
Cured for 7 days @ 22 °C
Lap Shear Strength, ISO 4587:
  Mild steel (grit blasted) N/mm² 25 (psi) (3,600)
  Aluminum (abraded) (Silicon Carbide Paper, A166 grit, P400A grade) N/mm² 21 (psi) (3,100)
  Aluminum (etched in acidic ferric sulphate) N/mm² 21 (psi) (3,100)
  Stainless steel N/mm² 19 (psi) (2,800)
Galvanized Steel (Hot Dipped) N/mm² 16 (psi) (2,300)
Brass N/mm² 11 (psi) (1,600)
Zinc dichromate N/mm² 16 (psi) (2,300)
Polycarbonate N/mm² 6.5 (psi) (940)
ABS N/mm² 6.2 (psi) (900)
GRP (Polyester resin matrix) N/mm² 5 (psi) (720)
Glass Fiber Reinforced Epoxy N/mm² 13 (psi) (1,900)

180° Peel Strength, ISO 8510-2:
Mild Steel (grit blasted) N/mm (lb/in) 10 (57.1)

IZOD Impact Resistance, ISO 9653 J/m²:
Mild Steel (grit blasted) 8.3

TYPICAL ENVIRONMENTAL RESISTANCE
Cured for 7 days @ 22 °C
Lap Shear Strength, ISO 4587:
Mild Steel (grit blasted)

GENERAL INFORMATION
This product is not recommended for use in pure oxygen and/or oxygen rich systems and should not be selected as a sealant for chlorine or other strong oxidizing materials.

For safe handling information on this product, consult the Material Safety Data Sheet, (MSDS).

Where aqueous washing systems are used to clean the surfaces before bonding, it is important to check for compatibility of the washing solution with the adhesive. In some cases these aqueous washes can affect the cure and performance of the adhesive.

Directions for use
1. For best performance surfaces for bonding should be clean, dry and free of grease. For high strength structural bonds, special surface treatments can increase the bond strength and durability.
2. To use, resin and hardener must be blended. Product can be applied directly from dual cartridges by dispensing through the mixer head supplied. Discard the first 3 to 5 cm of bead dispensed. Using bulk containers, mix thoroughly by weight or volume in the proportions specified in the Product Description Matrix. For hand mixing, weigh or measure out the desired amount of resin and hardener and mix thoroughly. Mix approximately 15 seconds after uniform color is obtained.
3. It is recommended that this product is not mixed and cured in bulk quantities of greater than 4 kg as excessive heat build-up can occur. Mixing smaller quantities will minimize the heat build-up.
4. Apply the adhesive as quickly as possible after mixing to one surface to be joined. For maximum bond strength apply adhesive evenly to both surfaces. Parts should be assembled immediately after mixed adhesive has been applied.
5. For working life please see section ‘Typical Properties of Uncured Material’. Higher temperatures and larger quantities will shorten this working time.
6. Keep the assembled parts from moving during cure. The joint should be allowed to develop full strength before subjecting to any service loads.
7. Excess uncured adhesive can be wiped away with organic solvent (e.g. Acetone).
8. After use and before adhesive hardens, mixing and application equipment should be cleaned with hot soapy water.

Not for product specifications
The technical data contained herein are intended as reference only. Please contact your local quality department for assistance and recommendations on specifications for this product.

Storage
Store product in the unopened container in a dry location. Storage information may be indicated on the product container labeling.

Optimal Storage: 8 °C to 21 °C. Storage below 8 °C or greater than 28 °C can adversely affect product properties. Material removed from containers may be contaminated during use. Do not return product to the original container. Henkel Corporation cannot assume responsibility for product which has been contaminated or stored under conditions other than those previously indicated. If additional information is required, please contact your local Technical Service Center or Customer Service Representative.
