This manual should be considered a permanent part of the motorcycle and should remain with the motorcycle when resold or otherwise transferred to a new owner or operator. The manual contains important safety information and instructions which should be read carefully before operating the motorcycle.

Comet650 R FI
FOREWORD

THANK YOU for choosing Hyosung motorcycle. We at Hyosung have designed, tested and produced these motorcycles using the most modern technology available to provide you with much happy, enjoyable, safe riding. Motorcycling is one of the most exhilarating sports and insure you to enjoy riding and you should become thoroughly familiar with the information presented in this Owner’s Manual before riding the motorcycle.

The proper care and maintenance that your motorcycle requires are outlined in this manual. By following these instructions explicitly you will insure a long trouble-free operating life for your motorcycle. Your Hyosung dealer has experienced technicians that are trained to provide your machine with the best possible service with the right tools and equipment.

All information, illustrations photographs and specifications contained in this manual are based on the latest product information available at the time of publication. Due to improvements or other changes, there may be some discrepancies in this manual. Hyosung reserves the right to make changes at any time.

Please note that this manual applies to all specifications for all respective destinations and explains all equipments. Therefore, your model may have different standard features than shown in this manual.

IMPORTANT

BREAK-IN INFORMATION FOR YOUR MOTORCYCLE

The first 1,600 km (1,000 miles) are the most important in the life of your motorcycle. Proper break-in operation during this time will help ensure maximum life and performance from your new motorcycle.

Hyosung parts are manufactured of high quality materials, and manufactured parts are finished to close tolerances. Proper break-in operation allows the machined surfaces to polish each other and mate smoothly.

Motorcycle reliability and performance depend on special care and restraint exercise during the break-in period. It is especially important that you avoid operating the engine in a manner which could expose the engine parts to excessive heat.

Please refer to the BREAK-IN section for specific break-in recommendations.

WARNING / CAUTION / NOTE

Please read this manual and follow its instructions carefully.
To emphasize special information the words "WARNING," "CAUTION," and "NOTE" have special meanings. Information following these signal words should be carefully reviewed.

**WARNING**
The personal safety of the rider may be involved. Disregarding this information could result in injury to the rider.

**CAUTION**
These instructions point out special service procedures or precautions that must be followed to avoid damaging the machine.

**NOTE**
This provides special information to make maintenance easier or important instructions clearer.
Noise Control System (muffler assembly)

TAMPERING WITH NOISE CONTROL SYSTEM PROHIBITED

Owners are warned that the law may prohibit:
(a) The removal or rendering inoperative by any person other than for the purpose of maintenance, repair or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its any sale or delivery to the ultimate purchaser or while it is in use; and
(b) The use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

MAINTENANCE:
The exhaust system of this motorcycle requires no periodic maintenance.
The engine should be adjusted to the manufacture’s specifications and the spark plug should be kept in good condition. Running the engine with incorrectly operating spark plug or misadjusted carburetor may cause permanent damage to the catalyst and to the noise control system.
CONSUMER INFORMATION

SAFE RIDING RECOMMENDATION FOR MOTORCYCLE RIDERS

Motorcycle riding is a great fun and an exciting sport. Motorcycle riding also requires him/her to take some extra precautions to ensure the safety of the rider and passenger. These precautions are:

WARNING

1. Before first use of the motorcycle, read this owner's manual carefully to become familiar with the motorcycle's features, and safety and maintenance requirements. Review all instructions, requirements and warnings with the riders. Keep the owner's manual in the owner's manual storage compartment located under the seat.

2. Before the rider's first use of the motorcycle, make sure that he/she is familiar with the location and operation of all controls, and has been instructed in the proper operation of the motorcycle.

3. For first use of the motorcycle, find a level, open area for the rider to use to become familiar with the operation of controls and the operating and handling characteristics of the motorcycle.

4. Before each use, perform daily inspections with the rider. Specific items to check are listed in the INSPECTION BEFORE RIDING section on page 55 of this owner's manual.

5. Make sure the rider wears a helmet, eye protection, and protective clothing (gloves, leather or heavy cloth pants, long sleeved shirt or jacket, boots).

6. Permit use only by dual rider. These motorcycles are designed for use only by dual rider.

7. Do not permit anyone to operate the motorcycle under the influence of alcohol or other drugs caused by damage to the motorcycle or altered handling characteristics.

8. Observe periodic maintenance requirements. Your authorized HYOSUNG dealer is trained and equipped to perform this service.

9. Drain gasoline from the fuel tank prior to transporting the motorcycle.

10. Caution the rider and others near the motorcycle not to get close to or touch any moving parts or any heated areas such as the engine and exhaust system.

11. Do not make any modifications to the motorcycle. Modifications may make the motorcycle unsafe or illegal in your state.
The are equipped with the side stand ignition interlock system. If the transmission is in neutral or side stand up, you can only start the engine pulling the clutch lever. This side stand ignition interlock system prevents the motorcycle from being started with side stand down. Make sure that the side stand ignition interlock system is working properly before riding.

**WARNING**

Keep both hands on the handgrips at all times when riding. Removing your hands from the handgrips reduces your ability to control the motorcycle, and could result in an accident.

**WARNING**

Always open the throttle gradually to prevent front wheel lifting. Failure to observe this precaution may result in loss of control and an accident.

**CAUTION**

These motorcycles always come on the head lamp, position lamp, meter lamp, tail lamp and license plate lamp when starting engine.

**WARNING**

Do not run the engine indoors or where there is little or no ventilation. Exhaust gases contain carbon monoxide, a potentially lethal gas that is colorless and odorless.

Never leave the motorcycle running while unattended, even for a short time.

**WARNING**

While operating the, the rider should keep both feet on the footrests at all times, or injuries resulting from accidents. Moving the rider’s feet from the footrests reduces the rider’s ability to control the motorcycle, and could lead to an accident.

**CAUTION**

WHEN KEEPING FOR LONG PERIOD:
1. Supply the enough fuel in the fuel tank.
2. Remove the battery from the motorcycle.

**CAUTION**

The trunk could be heated. Don’t keep anything that doesn’t endure heat.

Don’t keep the fragile.

Check if it is locked.

The unlocking of rear seat could cause serious accident.

Don’t allow water to get inside the trunk or it could damage.

Don’t keep the valuables in the trunk when leaving unattended.

Loading limit of trunk : 1 kg (2.21 lbs)
WEAR A HELMET

WARNING
Motorcycle safety equipment starts with a quality safety helmet. One of the most serious injuries that can happen is a head injury. ALWAYS wear a properly approved helmet. You should also wear a suitable eye protection.

RIDING APPAREL

WARNING
Loose fancy clothing can be uncomfortable and unsafe in terms of riding your motorcycle. Choose good quality motorcycle riding apparel in terms of riding your motorcycle.

INSPECTION BEFORE RIDING

WARNING
Review thoroughly the instructions in the “INSPECTION BEFORE RIDING” section of this manual. Do not forget to perform an entire safety inspection to ensure the safety of the rider and its passenger.

FAMILIARIZE YOURSELF WITH THE MOTORCYCLE

WARNING
Your riding skill and mechanical knowledge from the foundation for safe riding practices. We suggest that you practice riding your motorcycle in a non-traffic situation until you are thoroughly familiar with your machine and its controls. Remember practice makes perfect.

KNOW YOUR LIMITS

WARNING
Ride within the boundaries of your own skill at all times. Knowing these limits and staying within them will help you to avoid accidents.

BE EXTRA SAFETY CONSCIOUS ON BAD WEATHER DAYS

WARNING
Riding on bad weather days, especially wet ones, requires extra caution. Braking distances double on a rainy day. Stay off of the painted surface marks, manhole covers and greasy appearing areas as they can be especially slippery. Use extreme caution at railway crossings and on metal gratings and bridges. Whenever you have a doubt about road condition, slow down!
ACCESSORY INSTALLATION AND PRECAUTION SAFETY TIPS

There are a great variety of accessories available to Hyosung owners. Hyosung can not have direct control over the quality or suitability of accessories you may wish to purchase except genuine parts. The addition of unsuitable accessories can lead to unsafe operating conditions. It is not possible for Hyosung to test each accessory on the market or combinations of all the available accessories, however, your dealer can assist you in selecting quality accessories and installing them correctly.

Use extreme caution when selecting and installing the accessories for your Hyosung. We have developed some general guidelines which will aid you when deciding whether, and how to equip your motorcycle.

1. In case that additional weight or aerodynamic affecting accessories are installed, they should be mounted as low as possible, as close to the motorcycle and as near the center of gravity as is feasible. The mounting brackets and other attachment hardware should be carefully checked to ensure that it provides for a rigid, nonmovable mount. Weak mounts can allow the shifting of the weight and create a dangerous, unstable condition.

2. Inspect for proper ground clearance and bank angle. An improperly mounted load could critically reduce these two safety factors. Also determine that the “load” does not interfere with the operation of the suspension, steering or other control operations.

3. Accessories fitted to the handlebars or the front fork area can create serious stability problems. This extra weight will cause the motorcycle to be less responsive to your steering control. The weight may also cause oscillations in the front end and lead to instability problems. Accessories added to the machine should be as light as possible and kept to a minimum.

4. The motorcycle may be affected by a lifting condition or by an instability in cross winds or when being passed or passing large vehicles. Improperly mounted or poorly designed accessories can result in an unsafe riding condition, therefore caution should be used when selecting and installing all accessories.

5. Certain accessories displace the rider from his or her normal riding position.
This limits the freedom of movement of the rider and may limit his or her control ability.

6. Additional electrical accessories may damage the existing electrical system. Severe overloads may damage the wiring harness or create a dangerous situation due to the loss of electrical power during the operation of the motorcycle.

When carrying a load on the motorcycle, mount it as low as possible and as close as possible to the machine. An improperly mounted load can create a high center of gravity which is very dangerous and makes the motorcycle difficult to handle. The size of the “load” can also affect the aerodynamics and handling of the motorcycle.

Balance the load between the left and right side of the motorcycle and fasten it securely.

MODIFICATION

Modification of the motorcycle, or removal of original equipment may render the vehicle unsafe or illegal. Obey all applicable equipment regulations in your area.

FUEL, ENGINE OIL AND COOLANT RECOMMENDATION

FUEL

Use unleaded gasoline with an octane rating of 91 or higher. Unleaded gasoline can extend spark plug life and exhaust components life.

CAUTION

Spilling gasoline can damage the painted surfaces. Be careful not to spill any fuel when filling the fuel tank. Wipe spilled gasoline up immediately.

WARNING

- When refueling, always shut the engine off and turn the ignition key to the “OFF” position. Never refuel near the flames, sparks and heat sources.
- Do not overfill the fuel tank. Do not fill the fuel tank above the entrance lower end.

ENGINE OIL

ENGINE OIL SPECIFICATION

<table>
<thead>
<tr>

<tr>
<td>30</td>
<td>86</td>
<td>104</td>
</tr>
<tr>
<td>40</td>
<td>104</td>
<td>104</td>
</tr>
</tbody>
</table>

Use the chart to select a viscosity rating based on temperature range in your area.

NOTE

In very cold weather [below −15℃ (5°F)], use SAE 5W/30 for good starting and smooth operation.

Using a premium quality four stroke motor oil will increase the service life of your motorcycle.

WARNING

- Don’t mix the unrecommended oil. It could damage the engine.
- When refilling the oil, don’t allow the dust to get inside.
- Mop the oil spilt.
- Don’t put the patch on the filler cap. It could disturb the oil to be provided and damage the engine.
ENGINE COOLANT SOLUTION

Use an engine coolant that is compatible with aluminum radiator, mixed with distilled water only at a 50 : 50 mixture ratio for engine coolant solution.

An engine coolant mixture other than 50 : 50 can affect cooling efficiency or rust inhibiting performance.

ENGINE COOLANT

The engine coolant performs as rust inhibitor and water pump lubricant as well as anti-freeze. Therefore the engine coolant should be used at all times even though the atmospheric temperature in your area does not go down to freezing point.

<table>
<thead>
<tr>
<th>Required amount of water / coolant</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solution capacity (total)</td>
</tr>
<tr>
<td>50% Water</td>
</tr>
<tr>
<td>Engine coolant</td>
</tr>
</tbody>
</table>

COOLANT RESERVOIR TANK

Refer to 47 page.

WARNING

Engine coolant is harmful or fatal if swallowed or inhaled.

Do not drink anti-freeze or coolant solution. If swallowed, do induce vomiting. Immediately contact a poison control center or a physician.

Avoid inhaling mist or hot vapors; if inhaled, remove to fresh air. If coolant gets in eyes, flush eyes with water and seek medical attention. Wash thoroughly after handling. Solution can be poisonous to animals.

Keep out of the reach of children and animals.

CAUTION

Spilled engine coolant can damage painted surfaces.

Do not spill any fluid when filling the radiator. Wipe spilled engine coolant up immediately.

WATER FOR MIXING

Use distilled water only.

Water other than distilled water can corrode and clog the aluminum radiator.

CONTROLS

IGNITION SWITCH

The ignition switch has three positions:

◉ "OFF" POSITION
All electrical circuits are cut off. The engine will not start. The key can be removed.

◉ "ON" POSITION
The ignition circuit is completed and the engine can now start. The key cannot be removed from the ignition switch in this position.

◉ "LOCK" POSITION
To lock the steering, turn the handlebar all the way to the left. Push down the key to the "OFF" position and turn it to the "LOCK" position after come up again and remove the key. All electrical circuits are disconnected.

WARNING

Turning the ignition switch to the "OFF" or "LOCK" position while the motorcycle is moving can be hazardous. Moving the motorcycle while the steering is locked can be hazardous. You could lose your balance and fall, or you could drop the motorcycle.

Stop the motorcycle and place it on the side stand if equipped before locking the steering. Never attempt to move the motorcycle when the steering is locked.

IGNITION KEY

Your motorcycle ignition keys are stamped with an identifying number. This number is used when making replacement keys. Please write your key number in the box provided for your future reference.

Key number:
③ HIGH BEAM INDICATOR LAMP
The high beam indicator lamp will come on when the head lamp high beam is turned on.

④ NEUTRAL INDICATOR LAMP
The neutral indicator lamp will come on when the transmission is in neutral.
The lamp will go out when you shift into any gear other than neutral.

⑤ COOLANT TEMPERATURE METER

CAUTION
When the ignition switch is turned to the "ON" position, the display of speedometer will come on.

CAUTION
To adjust the light of speedometer display, push the switch (in the normal mode) for 0.6 ~ 1 seconds while you want to change.

[Light of speedometer display]

① TACHOMETER
The tachometer indicates the engine speed in revolutions per minutes (rpm).

② TURN SIGNAL INDICATOR LAMP
When the turn signals are being operated either to the right or to the left, the indicator will flash at the same time.

CAUTION
Running the engine with high engine coolant temperature can cause serious engine damage.
If the engine coolant temperature meter comes on the red lamp of "H" mark, stop the engine to let it cool.

CAUTION
When the ignition switch is turned to the "ON" position, the display of speedometer will come on.

CAUTION
To adjust the light of speedometer display, push the switch (in the normal mode) for 0.6 ~ 1 seconds while you want to change.

25%

When the coolant temperature is higher than 125°C, the red lamp of "H"(Hot) mark comes on.
The "C"(Cool) mark indicates the coolant temperature is cool.

CAUTION
Running the engine with high engine coolant temperature can cause serious engine damage.
If the engine coolant temperature meter comes on the red lamp of "H" mark, stop the engine to let it cool.
**FUEL METER**

When the red lamp of "E" mark comes on only, you should add fuel to the fuel tank at the first opportunity to avoid running out of fuel.

**CAUTION**

For checking the fuel meter, hold the motorcycle vertically and the ignition switch "ON".

**ODOMETER / TRIP METER**

The display in it has three functions, odometer and two trip meters. The display changes odometer or trip meter, as indicated before turning the ignition switch off.

The odometer registers the total distance that the motorcycle has been ridden.

The two trip meters are resettable odometer. They can register two kinds of distance at the same time. For instance, trip meter A can register the trip distance and trip meter B can register the distance between fuel stops.

To change the display, push the switch (in the normal mode) for 0.6 ~ 1 seconds while the display indicates the odometer, trip meter A or trip meter B you want to change.
The clock indicates 12-hour mode. Follow the procedure below to adjust the clock.

1. Push the switch ⑨ (in the normal mode) for 2 seconds until the hour and minutes display blink. It is the clock reset mode.
2. Adjust the hour display by pushing the switch ⑩ (in the clock reset mode) for 0.6 ~ 1 seconds.
3. Adjust the minutes display by pushing the switch ⑨ (in the clock reset mode) for 0.6 ~ 1 seconds.
4. Push the switch ⑨ for 2 seconds to resume in the normal mode.

---

⑪ SPEEDOMETER

The speedometer indicates the road speed in kilometers or miles per hour.

⑫ “FI” (Fuel Injection) CHECK LAMP

If the fuel injection system fails, the “FI” check lamp comes on and the LCD (Liquid Crystal Display) display panel indicates “FI” letters in following two modes:

- **A**: The LCD display panel indicates “FI” letters and speedometer alternately, and the “FI” check lamp comes on and remains lit.
- **B**: The LCD display panel indicates “FI” letters continuously and the “FI” check lamp comes on and blinks.

The engine may continue to run in mode A but the engine may not run in mode B.
CAUTION

Riding the motorcycle with the LCD display panel indicating a problem with fuel injection system and with “FI” check lamp lit can damage the engine and transmission.

Whenever the “FI” check lamp is lit and the display panel indicates “FI” have your authorized Hyosung dealer or a qualified mechanic inspect the fuel injection system as soon as possible.

NOTE

If the LCD display panel indicates “FI” letters and speedometer alternately, and the “FI” check lamp comes on and remains lit, keep the engine running and bring your motorcycle to an authorized Hyosung dealer.

If the engine stalls, try restarting the engine after turning the ignition switch off and on.

When the LCD display panel indicates “CHE”, make sure that the engine stop switch is in the “ ” position.

If the LCD display panel still indicates “CHE” after above procedure, inspect the ignition fuse and connection of lead wire couplers.

LEFT HANDLE SWITCH

① CLUTCH LEVER
The clutch lever is used for disengaging the drive to the rear wheel when starting the engine or shifting the transmission gear.
Squeezing the lever disengages the clutch.

② “PASS” SWITCH
Press the “PASS” switch to operate the head lamp high beam for using when pass.
With the ignition switch in the “ON” position, push the “PASS” switch to operate the head lamp high beam.

③ DIMMER SWITCH
Change the direction of head lamp light.

- “ ”: The head lamp high beam come on.
The high beam indicator lamp also comes on.
- “ ”: The head lamp low beam come on.

CAUTION

Do not operate when the dimmer switch “ ” position.
**WARNING**

Set the dimmer switch “ ” when other vehicle is running in front or against.

① ENGINE STOP SWITCH
Using when dangerous condition of falling down during drive and others or engine stop suddenly. The ignition circuit is off. The engine cannot start or run.

② FRONT BRAKE LEVER
The front brake is applied by squeezing the brake lever gently toward the throttle-grip.
Front brake be anxious about motorcycle falling down when braking suddenly as disk brake system. The brake lamp will come on when the lever is squeezed.

**CAUTION**

Always use the turn signals when you intend to change lanes or make a turn. Always be sure to turn the turn signal switch to the “OFF” position after completing the turn or lane change.

③ HORN SWITCH
Press the switch to operate the horn.

**WARNING**

Do not operate for the engine stop switch is in the “ ” position while driving at one’s pleasure.

④ TURN SIGNAL SWITCH
Using when left, right turn or change direction.

⑤ TURN SIGNAL SWITCH
Using when left, right turn or change direction.

⑥ TURN SIGNAL SWITCH
Using when left, right turn or change direction.
Do not engage the starting motor for more than five seconds at a time as it may overheat the wiring harness and starting motor.

If the engine does not start after several attempts, check the fuel supply and ignition system. (Refer to Page 77)

The are equipped with the side stand ignition interlock system. If the transmission is in neutral or side stand up, you can only start the engine with pulling in the clutch lever. This side stand ignition interlock system prevents the motorcycle from being started with side stand down. Make sure that the side stand ignition interlock system is working properly before riding.

These motorcycles always come on the head lamp, position lamp, meter lamp, tail lamp and license plate lamp when starting the engine.
Depressing the rear brake pedal will apply the rear brake. The brake lamp will be illuminated when the rear brake is operated.

**WARNING**

Apply the brake lightly and with great care on slippery surfaces to avoid skidding.

GEARSHIFT LEVER

Have a 6-speed transmission which operates as shown.

To shift properly, pull the clutch lever and close the throttle at the same time you operate the gearshift lever. Whenever a gear is selected, the gearshift lever will return to its normal position ready to select the next gear.

Lift the gearshift lever to upshift and depress the lever to downshift.

Neutral is located between first and 2nd gear.

When neutral is desired, depress or lift the lever halfway between first and 2nd gear.

It is not possible to upshift or downshift more than one gear at a time.

When shifting from first to 2nd gear or 2nd gear to low, neutral will be automatically skipped.
Reduce the motorcycle speed before down-shifting. When down-shifting, the engine speed should be increased before the clutch is engaged. This will prevent unnecessary wear on the drive train components and the rear tire.

⚠️ CAUTION

When the transmission is in neutral the green indicator lamp on the instrument panel will be lit. However, even though the light is illuminated, cautiously release the clutch lever slowly to determine whether the transmission is positively in neutral.

FOOTRESTS

0 FOOTREST POSITION ADJUSTMENT (FOR "Comet650 FL1" & "Comet650 FL2")

"Comet650 FL1" & "Comet650 FL2" have 3 types of footrest positions, right and left.

To change the position, remove the 6mm hexagon bolts ①, ② and install the bolts to the desired position by using the hexagon spanner 6mm.
When adjusting the footrest position, the 6mm hexagon bolts be torqued to the proper specification. If they are not, the footrest can come off unexpectedly.

**WARNING**

"""" are delivered from the factory on position A.

<table>
<thead>
<tr>
<th>Tighten Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Footrest mounting bolt</td>
</tr>
</tbody>
</table>

**GEARSHIFT LINK ROD**

(FOR "Comet650L" & "Comet650R" s OPTIONAL PARTS)

When the footrests in position C, exchange the gearshift link rod for appropriate riding position.

- **Position ② or ④**
  - Install the gearshift link rod③
- **Position ③**
  - Install the gearshift link rod④

**SIDE STAND**

When the footrests in position C, exchange the gearshift link rod for appropriate riding position.

- **Position ② or ④**
  - Install the gearshift link rod③
- **Position ③**
  - Install the gearshift link rod④

The gearshift link rod③ is optional parts.

"Comet650L" & "Comet650R" are equipped with the side stand ignition interlock system.

If the transmission is in neutral or side stand up, you can only start the engine with pulling the clutch lever.

This side stand ignition interlock system prevents the motorcycle from being started with side stand down.
The rear seat lock is located under the left rear seat.
To remove the rear seat, insert the ignition key into the lock and turn it clockwise.
To reinstall the rear seat, slide the seat hook into the seat hook retainer and push down firmly until the seat snaps into the locked position.

To remove the front seat, pull the knob located under the rear seat.

**NOTE**

<table>
<thead>
<tr>
<th>NO</th>
<th>Neutral switch</th>

</tbody>
</table>

**WARNING**

Make sure that the side stand ignition interlock system is working properly before riding.
To adjust the spring pre-load, turn the adjuster counter-clockwise to the desired position with the clamp wrench. Position 1 provides the softest spring pre-load and position 5 provides the stiffest.

Position 3 is delivered from the factory with its adjuster set on position 3.

**NOTE**

Loading limit of trunk: 1 kg (2.21 lbs)

**CAUTION**

- The trunk could be heated. Don’t keep anything that doesn’t endure heat.
- Don’t keep the fragile.
- Check if it is locked.
- The unlocking of rear seat could cause serious accident.
- Don’t allow water to get inside the trunk or it could damage.
- Don’t keep the valuables in the trunk when leaving unattended.

A small and light article such as maintenance manual or Owner’s manual can be placed under the rear seat.

**REAR SHOCK ABSORBER**

**TRUNK**

A small and light article such as maintenance manual or Owner’s manual can be placed under the rear seat.
The standard settings of front forks are selected to meet various riding conditions such as low to high motorcycle speed and light to heavy load on the motorcycle.

The front forks settings can be adjusted for your preference and fine-tuning.

6 DAMPING FORCE ADJUSTMENT

The rebound and compression damping force can be individually adjusted by turning the respective adjusters. The rebound damping force adjuster \( \text{①} \) is located at the top of the front fork. The compression damping force adjuster \( \text{②} \) is located at the bottom of the front fork.

To adjust the damping force turn in the adjuster fully for “S” or “H” direction. Count the number of clicks from the fully turned-in position.

Fully turned-in “H” direction provides stiffest damping force and turning “S” direction the adjuster will soften damping force.

The rebound and compression damping force is set on “Solo riding standard (refer to below chart)” position at the factory.

**WARNING**

Be sure to adjust the damping force on both front forks equally. Setting one front fork harder than the other will interfere the stability of the motorcycle.

Gasoline is extremely flammable and toxic. Always observe the following precautions when refueling your motorcycle:

- Never permit motorcycle refueling by anyone other than an adult.
- Refuel in a well ventilated area.
- Make sure the engine is off and avoid spilling fuel on a hot engine.
- Do not smoke, and make sure there are no open flames or sparks in the area.
- Avoid prolonged contact with skin and breathing of gasoline vapors.
- Keep children and pets away during refueling.

**WARNING**

To open the fuel tank cap, insert the ignition key into the lock and turn it clockwise. With the key inserted, lift the cap up with the key.

To close the fuel tank cap, push the cap down firmly with the key in the cap lock.

**WARNING**

Do not overfill the fuel tank. Stop adding fuel when the fuel level reaches the bottom of the filler neck. If you fill the tank beyond this level, fuel may overflow when it expands due to engine heat or heating by the sun.
ENGINE OIL

Long engine life depends much on the selection of quality oil and the periodic changing of the oil. Daily oil level checks and periodic changes are two of the most important maintenances to be performed.

⊙ ENGINE OIL LEVEL CHECK
Follow the procedure below to inspect the engine oil level.
1. Start the engine and run it for a few minutes.
2. Stop the engine and wait three minutes.
3. Hold the motorcycle vertically and inspect the engine oil level through the engine oil level lens on the right side on the engine.

Never operate the motorcycle if the engine oil level is below the “Lower line mark(L)” in the engine oil level lens. Never fill the engine oil above the “Upper line mark(F)”. Engine oil level being most suitable about 1mm under the “Upper line mark(F)” of the engine oil level lens. In case of the engine oil pouring excessively, the engine output being made insufficient. Be careful not to pour the engine oil excessively.

⊙ ENGINE OIL AND FILTER CHANGE
Change the engine oil and filter, after first running 1,000 km and every running 6,000 km.

The oil should always be changed when the engine is hot so that the oil will drain thoroughly from the engine. The procedure is as follows.

<table>
<thead>
<tr>
<th>ENGINE OIL CAPACITY</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oil change</td>
</tr>
<tr>
<td>Oil and filter change</td>
</tr>
<tr>
<td>Engine overhaul</td>
</tr>
</tbody>
</table>

CAUTION
“Fuel, Engine oil and Coolant” use certainly to recommend at the front part.
1. Place the motorcycle on the jack or block.

2. Place a drain pan under the engine.

3. Remove the engine oil filler cap ①.

4. Drain the oil by removing the drain plug ② located on the bottom of the engine.

5. Remove the three nuts ③ holding the filter cap ⑥ in place.

More frequent servicing may be performed on motorcycles that are used under severe conditions, inspect ① Quantity of Engine oil, ② Pollution degree of Engine oil before riding the motorcycle and then supplement and replace at any time to prevent damage of the engine.

CAUTION

In case of the engine oil pouring excessively, the engine output being made insufficient. Be careful not to pour the engine oil excessively.

Necessarily, confirm and clean the oil strainer ⑦ when replace the Engine oil (specially, when first replacement).

CAUTION

In case of the engine oil pouring excessively, the engine output being made insufficient. Be careful not to pour the engine oil excessively.

CAUTION

Comet 650  2008.7.11  3:40 PM  į ` 45   JINSUN  300DPI 100LPI  T
**CAUTION**

Insert the filter so that surface of the filter hole turn toward the engine.

**OIL FILTER INSTALLATION**

- **INSERTION DIRECTION**
- **LUSTER MATERIAL**
- **HYOSUNG 16510HN910**
- **OUTSIDE**

**CAUTION**

When install the oil filter, necessarily, "HYOSUNG" character and "16510HN910" part's NO. install toward the outside, otherwise can damage the engine.

---

**WARNING**

Engine oil and exhaust pipes can be hot enough to burn you.
Wait until the oil drain plug and exhaust pipes are cool enough to touch with bare hands before draining oil.

**WARNING**

New and used oil and solvent can be hazardous. Children and pets may be harmed by swallowing new or used engine oil or solvent. Continuous contact with used engine oil has been found to cause skin cancer in laboratory animals. Brief contact with used oil or solvent may irritate skin.

- Keep new and used oil and solvent away from children and pets.
- Wear a long-sleeve shirt and waterproof gloves.
- Wash with soap if oil or solvent contact your skin.

6. Replace the engine oil filter with a new one.
7. Before replacing the engine oil filter cap, be sure to check that the engine oil filter spring and the "O" ring are installed correctly. Use new "O" ring each time the engine oil filter element is replaced.
8. Replace the oil filter cap and tighten the nuts securely but do not over tighten them.

---

**WARNING**

New and used oil and solvent can be hazardous. Children and pets may be harmed by swallowing new or used engine oil or solvent. Continuous contact with used engine oil has been found to cause skin cancer in laboratory animals. Brief contact with used oil or solvent may irritate skin.

- Keep new and used oil and solvent away from children and pets.
- Wear a long-sleeve shirt and waterproof gloves.
- Wash with soap if oil or solvent contact your skin.
9. Replace the drain plug and tighten it securely. This time, insert the gasket necessarily. Pour fresh oil through the filler hole. Approximately 3,200 ㎖ of oil will be required.

**CAUTION**

Approximately 3,000 ㎖ of oil must be required when changing oil only without replacing the oil filter.

**CAUTION**

In case of the engine oil pouring excessively, the engine output being made insufficient. Be careful not to pour engine oil.

10. Operate the engine a few seconds by idling speed.

Inspect the oil leakage at the oil filter cap.

11. Confirm the oil level with the oil level lens after waiting about a minute next to stopping the engine.

The oil level is located between the “Lower line(L)” and the “Upper line(F)”.

When below the “Lower line(L)”, refill the oil between the “Lower line(L)” and the “Upper line(F)”.

- **ENGINE COOLANT**

**COOLANT LEVEL**

The coolant should be kept between the “F”(FULL) and “L”(LOW) level lines in the reservoir tank at all times. Inspect the level every time before riding while the motorcycle vertically. If the coolant is found lower than the “L” level line, add properly mixed coolant in the following way:

1. Remove the front and rear seat.

2. Remove the filler cap and add properly mixed coolant through the filler hole until it reaches the “F” line.

Refer to the FUEL, ENGINE OIL AND COOLANT RECOMMENDATION section (15 page).
**WARNING**

Engine coolant is harmful or fatal if swallowed or inhaled.

Do not drink anti-freeze or coolant solution. If swallowed, do not induce vomiting. Immediately contact a poison control center or a physician. Avoid inhaling mist or hot vapors; if inhaled, remove to fresh air. If coolant gets in eyes, flush eyes with water and seek medical attention. Wash thoroughly after handling. Solution can be poisonous to animals. Keep out of the reach of children and animals.

**NOTE**

Adding only water will dilute the engine coolant and reduce its effectiveness. Add 50:50 mixture of engine coolant and water.

**CHANGING THE COOLANT**

Change the coolant every two years.

**NOTE**

About 1.6ℓ of coolant will required when filling the radiator and reservoir tank.

**WARNING**

Do not open the radiator cap when the engine is hot, as you may be injured by escaping hot liquid or vapor.

**SIDE COWLING INNER**

(for "Comet650 FL1" & "Comet650 FL")

"Comet650 FL1" & "Comet650 FL" have the "side cowling inner" at the right-side. Use the "side cowling inner" to operate the radiator cap. To disassemble the "side cowling inner", remove the two bolts.
RIDING TIPS

STARTING THE ENGINE

Before attempting to start the engine make sure:

1. Inspect every day once before riding the motorcycle.
2. The transmission is in neutral.
3. The ignition switch is in the “ON” position.
4. The engine stop switch is in the “ ” position.
5. Moving the side stand to the fully upper position.
6. Pull in the clutch lever.

WARNING

The are equipped with the side stand ignition interlock system.
If the transmission is in neutral or side stand up, you can only start the engine with pulling in the clutch lever.
This side stand ignition interlock system prevents the motorcycle from being started with side stand down.
Make sure that the side stand ignition interlock system is working properly before riding.

WARNING

Running the engine indoors or in a garage can be hazardous.
Exhaust gas contains carbon monoxide, a gas that is colorless and odorless and can cause death or severe injury.
Only run the engine outdoors where there is a fresh air.

CAUTION

Running the engine too long without riding may cause the engine to overheat.
Overheating can result in damage to internal engine components and discoloration of exhaust pipes.
Shut the engine off if you cannot begin your ride promptly.

CAUTION

● Take off the starter switch right after started.
● Do not engage the starting motor for more than five seconds at a time as it may overheat the wiring harness and starting motor.
If the engine does not start after several attempts, check the fuel supply and ignition system.
(Refer for Page 77)

CAUTION

These motorcycles always come on the head lamp, position lamp, meter lamp, tail lamp and license plate lamp when starting the engine.
STARTING OFF

**WARNING**
Riding these motorcycles at excessive speed increases your chances of losing control of the motorcycle. This may result in an accident. Always ride within the limits of your skills, your motorcycle, and the riding conditions.

**WARNING**
Removing your hands from the handlebars or feet from the footrests during operation can be hazardous. If you remove even one hand or foot from the motorcycle, you can reduce your ability to control the motorcycle. Always keep both hands on the handlebars and both feet on the footrests of your motorcycle during operation.

**WARNING**
Sudden side winds, which can occur when being passed by large vehicles, at tunnel exits or in hilly areas, can upset your control. Reduce your speed and be alert to side winds.

---

**CAUTION**
The “FI” check lamp ① comes on and the LCD display panel ② indicates “FI” letters, contact an authorized Hyosung dealer.
Pull the clutch lever in and pause momentarily. Engage first gear by depressing the gearshift lever downward.

Turn the throttle grip toward you and at the same time release the clutch lever gently and smoothly. As the clutch engages, the motorcycle will start moving forward. To shift to the next higher gear, accelerate gently, then close the throttle and pull the clutch lever in simultaneously. Lift the gearshift lever upward to select the next gear and release the clutch lever and open the throttle again.

Select the gears in this manner until sixth gear is reached.

**WARNING**

Downshifting while the motorcycle is leaned over in a corner may cause rear wheel skid and loss of control. Reduce your speed and downshift before entering corner.

**WARNING**

Do not operate the ignition switch of its "OFF" or "LOCK" position or the engine stop switch of its "" position while driving at one’s pleasure.

**CAUTION**

Revving the engine into the red zone can cause severe engine damage.

Never allow the engine to rev into the red zone in any gear.

**USING THE TRANSMISSION**

The transmission is provided to keep the engine operating smoothly in its normal operating speed range. The gear ratios have been carefully chosen to meet the characteristics of the engine. The rider should always select the most suitable gear for the prevailing conditions.

**WARNING**

Downshifting when engine speed is too high can:
- cause the rear wheel to skid and lose traction due to increased engine braking, resulting in an accident; or
- force the engine to overrev in the lower gear, resulting in engine damage.

Reduce speed before downshifting.
RIDING ON HILLS

When climbing steep hills, the motorcycle may begin to slow down and show lack of power. At this point you should shift to a lower gear so that the engine will again be operating in its normal power range. Shift gear rapidly to prevent the motorcycle from losing momentum.

When riding down a steep hill, the engine may be used for braking by shifting to a lower gear.

Be careful, however, not to allow the engine to overrev.

STOPPING AND PARKING

1. Turn the throttle grip away from you to close the throttle completely.
2. Apply the front and rear brakes evenly and at the same time.
3. Downshift through the gears as road speed decreases.
4. Select neutral with the clutch lever squeezed towards the grip (disengaged position) just before the motorcycle stops. Neutral position can be confirmed by observing the neutral indicator lamp.

WARNING

Inexperienced riders tend to underutilize the front brake. This can cause excessive stopping distance and lead to a collision. Using only the front or rear brake can cause skidding and loss of control.

Apply both brakes evenly and at the same time.

WARNING

Hard braking while turning may cause wheel skid and loss of control.

Brake before you begin to turn.

WARNING

Hard braking on wet, loose, rough, or other slippery surfaces can cause wheel skid and loss of control.

Brake lightly and carefully on slippery or irregular surfaces.
5. Park the motorcycle on a firm, flat surface where it will not fall over.

**WARNING**
Following another vehicle too closely can lead to a collision. As vehicle speeds increase, stopping distance increases progressively.

Be sure you have a safe stopping distance between you and the vehicle in front of you.

6. Push down the key to the “OFF” position, and turn it to the “LOCK” position after come up again.

7. Remove the ignition key.

**WARNING**
A hot muffler can burn you. The muffler will be hot enough to burn you for some time after stopping the engine.

Park the motorcycle where pedestrians or children are not likely to touch the muffler.

The opening explains how important proper break-in is to achieve maximum life and performance from your new **Hyosung**.

The following guidelines explain proper break-in procedures.

**MAXIMUM THROTTLE OPENING RECOMMENDATIONS**

The table below shows the maximum throttle opening recommendation during the break-in period.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Maximum Throttle Opening</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial 800 km (500 miles)</td>
<td>Less than 1/2 throttle</td>
</tr>
<tr>
<td>Up to 1,600 km (1,000 miles)</td>
<td>Less than 3/4 throttle</td>
</tr>
</tbody>
</table>

**AVOID CONSTANT LOW SPEED**

Operating the engine at constant low speed (light load) can cause parts to glaze and not seat in. Allow the engine to accelerate freely through the gears, without exceeding the recommended maximum limits. Do not, however, use full throttle for the first 1,600 km (1,000 miles).

**VARY THE ENGINE SPEED**

The engine speed should be varied and not held at a constant speed.

This allows the parts to be “loaded” with pressure and then unloaded, allowing the parts to cool.

This aids the mating process of the parts. It is essential that some stress be placed on the engine components during break-in to ensure this mating process.

Do not, though, apply excessive load on the engine.
破合新轮胎

新轮胎需要适当的破合以确保最大性能，就像发动机一样。

在破合初期逐渐增加角速度，然后在前160 km (100 miles) 之前避免急加速、急转弯和急刹车。前160 km (100 miles) 内避免急加速、急转弯和急刹车。

警告

不要在发动机未运转的情况下使用，否则可能会导致轮胎打滑和失去控制。

使用新轮胎时应小心。

按照本节所述进行适当的破合，并避免在前160 km (100 miles) 内急加速、急转弯和急刹车。

INSPECTION BEFORE RIDING

Before riding the motorcycle, be sure to check the following item. Inspect every day once them before riding motorcycle.

<table>
<thead>
<tr>
<th>WHAT TO CHECK</th>
<th>CHECK FOR:</th>
</tr>
</thead>
</table>
| Steering      | - Smoothness  
|               | - No restriction of movement  
|               | - No play or looseness  |
| Throttle      | - Correct play in the throttle cable  
|               | - Smooth operation and positive return of the throttle grip to the closed position  |
| Clutch        | - Correct lever play  
|               | - Smooth and progressive action  |
| Brakes        | - Fluid level in the reservoir to be above “LOWER” line  
|               | - Correct pedal and lever play  
|               | - No “sponginess”  
|               | - No fluid leakage  
|               | - Brake pads not to be worn down to the limit line  |
| Suspension    | Smooth movement  |
| Fuel          | Enough fuel for the planned distance of operation  |
| Drive chain   | - Correct tension or slack  
|               | - Adequate lubrication  
|               | - No excessive wear or damage  |
| Tires         | - Correct pressure  
|               | - Adequate tread depth  
|               | - No cracks or cuts  |
| Engine oil    | Correct level and pollution degree of engine oil  |
| Cooling system| - Proper coolant level  
|               | - No coolant leakage  |
| Lighting      | Operation of all lights and indicators  |
| Horn          | Correct function  |
| Engine stop switch | Correct function  |
| Side stand / Ignition interlock switch | Proper operation |
PERIODIC MAINTENANCE

The chart indicates the intervals between periodic service in kilometers.
At the end of each interval, be sure to inspect, check, lubricate and service as instructed.
If your motorcycle is used under high stress conditions such as continuous full throttle operation, or is operated in a dusty climate, certain services should be performed more often to ensure reliability of the machine as explained in the maintenance section.
Your Hyosung dealer can provide you with further guidelines.
Steering components, suspensions and require very special and careful servicing. For maximum safety we suggest that you have these items inspected and serviced by your authorized Hyosung dealer or a qualified service mechanic.

LUBRICATION POINTS

Proper lubrication is important for smooth and long life of each working part of your motorcycle and also for safe riding. It is a good practice to lubricate the motorcycle after a long rough ride or after it gets wet in the rain or after washing it.
Major lubrication points are indicated as follows.

WARNING
Improper maintenance or failure to perform recommended maintenance increases the chance of an accident or motorcycle damage.

CAUTION
Using poor quality replacement parts can cause your motorcycle to wear more quickly and may shorten its useful life.
Use only genuine Hyosung replacement parts or their equivalent.
① Clutch lever holder and clutch cable

</tbody>
</table>

FUEL HOSE

Inspect the fuel hose for damage and fuel leakage. If any defect are found the fuel hose must be replaced. Replace the fuel hose every 4 years.

ENGINE OIL

Check if there is leakage from crankcase.
Inspect the rear shock absorber for oil leakage and spring condition.

**BATTERY**

- **INSPECTION OF BATTERY SOLUTION LEVEL**
  - MF (Maintenance Free) battery of airtight type is used for these motorcycles.
  - It is not necessary to inspect or supplement battery fluid.
  - The battery is located under the front seat.
  - However, have your dealer check the charging condition of battery periodically.

- **CAUTION**
  - Do not remove absolutely airtight cover as airtight type battery.
  - Keep after separate at the motorcycle for the minimum of self electric discharge and electric leakage when don't use for a long time.
  - Remove the (−) negative terminal when keep intact at the motorcycle.

**FRONT FORK**

- Check if there is any noise by bend of front fork while moving the handle upward and downward.
- Inspect whether the steering stem is well assembled while moving front fork up/downwards and/or forward/backward.

**GASOLINE**

Check if there is leakage from fuel tank, fuel pump, hose, fuel injection system.

**ENGINE COOLANT**

Check if there is leakage from the radiator, coolant hose.

**RADIATOR**

Check if there is damage from the radiator.

**RADIATOR HOSE**

Check to see the radiator hose for crack, damage or engine coolant leakage.
If any defects are found, replace the radiator hose with new ones.

**RUBBER CAP OF CABLES**

Mop them up with a patch when washing.

**EXHAUST PIPE AND MUFFLER**

Inspect the exhaust pipe and muffler joint for loosening.

**REAR SHOCK ABSORBER**

Inspect the rear shock absorber for oil leakage and spring condition.
If the air cleaner element has become clogged with dust, intake resistance will increase with a resultant decrease in power output and an increase in fuel consumption. If riding under severe conditions must be cleaned or replaced more frequently than maintenance schedule. Check and clean the air cleaner element periodically according to the following procedure.

**AIR CLEANER**

1. The air cleaner is located under the fuel tank. Remove the fuel tank.  
2. Remove the six screws.  
3. Pull up the air cleaner cap, and the air cleaner element.  

**CAUTION**

If the air cleaner element is polluted, will occur to starting go out, output insufficiency, combustion efficiency decline, and sooty smoke (black smoke). This appearance is occurred at first to clean the air cleaner element and confirm.

1. The air cleaner is located under the fuel tank. Remove the fuel tank.  
2. Remove the six screws.  
3. Pull up the air cleaner cap, and the air cleaner element.  

**CLEAN OF BATTERY TERMINAL**

Clean the battery terminal when it is dusty or rusted.

1. Set the ignition switch “OFF” position.  
2. Disassemble the front seat, disassemble the (+) positive battery wire after the (-) negative battery wire. Remove the battery.  
3. Clean the terminal. If there is white dust, clean it with warm water.  
4. Assemble the battery wires and grease the terminal lightly.

**CAUTION**

- Keep the battery away from fires.  
- When disassemble the battery wire, take off terminal first with the ignition switch “OFF” position. When assemble, terminal first.  
- Fasten certainly the battery wires.  
- Incorrect installation of the battery will reverse the terminal position resulting in possible electrical system damage due to incorrect battery lead connection.  
- Never charge a battery while still in the machine as damage may result to the battery or regulator/rectifier.
4. Clean the air cleaner element for the following:
   1) When the air cleaner element clean with the air gun, necessarily blow at the inside by compressed air.
   2) Carefully examine the air cleaner element for tears during cleaning. Replace it with a new one if it is torn.
   3) Assemble the element completely or damage severely the engine.
   4) Be careful not to allow water to go inside the air cleaner element.

⚠️ CAUTION

Before and during the cleaning operation, inspect the element for tears. A torn element must be replaced. Be sure position the element snugly and correctly, so that no incoming air will bypass it. Remember, rapid wear of piston rings and cylinder bore is often caused by a defective or poorly fitted element.

⚠️ CAUTION

● When the assembly of air cleaner element is not completely done, dusts can go inside and damage severely engine.
● Be careful not to allow water to go into the element while washing.

⚠️ CAUTION

More frequent servicing may be performed on motorcycles that are used under severe conditions, also clean the air cleaner element when replacing the oil to prevent damage of the engine.

⚠️ CAUTION

● Assemble the element completely or damage severely the engine.
● Be careful not to allow water to go inside the air cleaner element.
PLUG REPLACEMENT GUIDE

<table>
<thead>
<tr>
<th>Type</th>
<th>Part Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hotter type</td>
<td>CR7E</td>
</tr>
<tr>
<td>Standard type</td>
<td>CR8E</td>
</tr>
<tr>
<td>Colder type</td>
<td>CR9E</td>
</tr>
</tbody>
</table>

Inspect the plug and drain water and oil at the periodic maintenance interval. The air cleaner oil drain plug is located beneath the air cleaner case.

Readjust the spark plug gap to 0.7 ~ 0.8mm (0.028 ~ 0.032 in) by using a spark plug gap thickness gauge.

CAUTION

- Do not over torque or cross thread the spark plug or the aluminum threads of the cylinder head will be damaged.
- Do not allow contaminants to enter the engine through the spark plug holes when the plug is removed.
- The standard spark plug for these motorcycles has been carefully selected to meet the vast majority of all operational ranges. If the spark plug color indicates that other than a standard spark plug be used, it is best to consult your Hyosung dealer before selecting an alternate plug or heat range. The selection of an improper spark plug can lead to severe engine damage.

Remove the carbon deposits periodically from the spark plug with a piece of hard wire or pin.
**IDLING ADJUSTMENT**

We suggest that you have your motorcycle's idling speed adjusted by your authorized Hyosung dealer.

**CAUTION**

Do not adjust the idle speed to avoid variations of the carburetion setting.

---

**WARNING**

Inadequate throttle cable play can cause engine speed to rise suddenly when you turn the throttle grip. This can lead to loss of rider control.

Adjust the throttle cable play so that engine idle speed does not rise due to throttle grip movement.

---

**THROTTLE CABLE ADJUSTMENT**

These motorcycles have a twin throttle cable system. Cable A is for throttle cable and cable B is for returing cable.

To adjust the cable play:

1. Loosen the lock nut①.
2. Turn in the adjuster② fully.
3. Loosen the lock nut③.
4. Turn the adjuster④ so that the throttle cable has 0.5 ~ 1.0 mm (0.02 ~ 0.04 in) play.
5. Tighten the lock nut③ while holding the adjuster④.
6. While holding the throttle grip at the closed position turn out the adjuster② to feel resistance.
7. Tighten the lock nut① while holding the adjuster②.
CLUTCH CABLE ADJUSTMENT

At each maintenance interval, adjust the clutch cable play by means of clutch cable adjuster.

The cable play should be 2 mm (0.08 in) as measured at the clutch lever holder before the clutch begins to disengage.

If you find the play of the clutch incorrect, adjust it in the following way:

1. The clutch lever play
2. The lock nut
3. The clutch lever adjuster
4. The rubber boot
5. The cable adjuster
6. The clutch cable adjuster lock nut

CLUTCH CABLE ADJUSTMENT

- A basis adjustment be allowed by the clutch lever adjuster
- Loosen the clutch lever adjuster.
- Screw the lock nut clockwise fully, after finishing adjustment.
- After end of adjustment, tighten the lock nut and cover the rubber boot.
- If not adjust by the adjuster, loosen the clutch cable adjuster lock nut.
- Turn the clutch cable adjuster in or out to acquire the specified play.
- After end of adjustment, tighten the lock nut.
- The clutch cable should be lubricated with a light weight oil whenever it is adjusted.
If you find any of these problems with your sprocket, consult your Hyosung dealer.

**CAUTION**

The two sprockets should be inspected for wear when a new chain is installed and replace them if necessary.

**DRIVE CHAIN ADJUSTMENT**

Adjust the drive chain slack to the proper specification. The chain may require more frequent adjustments than periodic maintenance schedule depending upon your riding conditions.

Chain adjust in the following way.

- **Insepcting the Drive Chain**
  When inspecting the chain, look for the following:
  - Loose pins
  - Damaged rollers
  - Dry or rusted links
  - Missing X-O ring seals
  - Kinked or binding links
  - Excessive wear
  - Improper chain adjustment

  If you find something wrong with the drive chain condition or adjustment, correct the problem if you know how. If necessary, consult your authorized Hyosung dealer.

  Damage to the drive chain means that the sprockets may also be damaged. Inspect the sprockets for the following:
  - Excessively worn teeth
  - Broken or damaged teeth
  - Loose sprocket mounting nuts

The chain may require more frequent adjustment than it is with periodic maintenance depending upon your riding conditions. Check the chain every 1,000 km.
1. Place the motorcycle on the jack or block.
2. Loosen the axle nut ①.
3. Loosen the lock nut ②.
4. Adjust the slack in the drive chain by adjuster ③ as turning toward the left and right.
5. For alignment of the rear sprocket and the front sprocket, there are reference mark ④ on the same position, right and left.

After aligning and adjusting the slack in the drive chain to 20 ~ 30 mm (0.79 ~ 1.18 in), retighten the lock nut and axle nut securely and perform a final inspection.

**CAUTION**

The drive chain for these motorcycles is made of the special material. The chain should be replaced with a RK525XSO for a “Comet650” motorcycle. Use of another chain may lead to premature chain failure.

**CAUTION**

The drive chain should be inspected every time before riding. Excessive chain slack could cause the chain to come off the sprockets and result in accident or serious engine damage.

---

**WARNING**

Be careful not to touch the muffler when it is hot: a hot muffler can burn you.

**DRIVE CHAIN CLEANING AND OILING**

This drive chain has special "X-O rings". Clean and oil the chain periodically, as follows:

1. Clean the chain with kerosene. If the chain tends to rust, the interval must be shortened. Kerosene is a petroleum product and will provide some lubrication as well as cleaning action.

**WARNING**

Kerosene can be hazardous. Kerosene is flammable. Children or pets may be harmed from contact with kerosene.

Keep flames and smoking materials away from kerosene. Keep children and pets away from kerosene. If swallowed, induce vomiting. Call a physician immediately. Dispose of used kerosene properly.

**CAUTION**

Cleaning the chain with gasoline or commercial cleaning solvents can damage "X-O rings" and ruin the chain.

Clean the drive chain with kerosene only.
2. After thoroughly washing the chain and allowing it to dry, oil the links with a Hyosung chain lube or an equivalent.

**CAUTION**

Some drive chain lubricants contain solvents and additives which could damage the “X-O rings” in your chain.

Use Hyosung chain lube or an equivalent that is specifically intended for use with “X-O rings” chains.

---

**BRAKES**

Utilize front and rear disk brakes.

Properly operating the brake systems are vital to safe riding. Be sure to perform the brake inspection requirements as scheduled.

The brakes should be inspected at periodic inspection by your authorized Hyosung dealer.

**BRAKE FLUID**

Be sure to check the brake fluid level in the master cylinder. If the level was found to be lower than the lower mark while holding the motorcycle upright, replenish with the proper brake fluid that meets Hyosung’s requirements.

As the brake pads wear, the fluid level will drop to compensate for the new position of brake pads.

Replenishing the master cylinder to considered normal periodic maintenance.
These motorcycles use glycol-based brake fluid. Do not use or mix different types of brake fluid, otherwise serious damage will result in the brake system. Use DOT4 brake fluid. Do not spill any brake fluid on painted or plastic surfaces as it will damage the surface severely. Never use any brake fluid that has been stored in a used or unsealed container. Never reuse brake fluid left over from the last servicing and stored for long period as it absorbs moisture from the air.

**CAUTION**

Brake fluid may be harmful if swallowed or if it comes in contact with skin or eyes. Contact your doctor immediately if brake fluid is swallowed and induce vomiting. If brake fluid gets into the eyes or in contact with the skin, flush thoroughly with plenty of water.
**BRAKE PADS**
Inspect the front brake pads by nothing whether or not the friction pads are worn down to the grooved limit line. If a pad is worn to the grooved limit line it must be replaced with a new one by your authorized Hyosung dealer or qualified service mechanic.

Inspect every day in the following point at the brake system.
1. Brake fluid leakage of the front and rear brake system.
2. Leak or damage of the brake hose.
3. Operating of the brake lever and pedal.
4. Wear of the front and rear brake pads.

**WARNING**
Riding with worn brake pads will reduce braking performance and will increase your chance of having accident. Inspect brake pad wear before each use. Ask your Hyosung dealer or qualified mechanic to replace brake pads if any pad is worn to the limit.

**CAUTION**
The front and rear brake system be replaced the brake hose or the brake fluid according to periodic inspection chart by your authorized Hyosung dealer for safety as in times of operating at high pressure.

**CAUTION**
After replaced the front or rear brake pads, the brake lever and pedal pull and release several times so that it is setting at the original place. Then, do not ride the motorcycle until operating the brake fluid and becoming the brake distance.

Inspect the front brake pads by nothing whether or not the friction pads are worn down to the grooved limit line. If a pad is worn to the grooved limit line it must be replaced with a new one by your authorized Hyosung dealer or qualified service mechanic.
⑦ BRAKE DISK INSPECTION.
Check the brake disk for damage or cracks.

⑧ FRONT BRAKE FLUID SUPPLY
1. Place the motorcycle on a level surface and keep the handlebars straight.
2. Clean the brake fluid reservoir around not to allow dust to get inside of it.
3. Loosen the screw and open the cap.
4. Replenish with brake fluid to the upper line.

⚠️ CAUTION
Do not spill any brake fluid on painted or plastic surfaces as it will damage the surface severely.

NOTE
The recommended brake fluid : DOT4

5. Fasten the cap.

⑧ REAR BRAKE FLUID SUPPLY
1. Place the motorcycle on a level surface and keep the handlebars straight.
2. Clean the brake fluid reservoir around not to allow dust to get inside of it.
3. Turn the cap to the counter-clockwise.
4. Replenish with brake fluid to the upper line.

NOTE
The recommended brake fluid : DOT4

5. Fasten the cap.

⑨ FRONT BRAKE LAMP SWITCH
The front brake lamp switch is located beneath the front brake lever. Loosen the switch fitting screws and adjust the timing by moving the switch body forward or backward.

⑩ REAL BRAKE LAMP SWITCH
The rear brake lamp switch is located at right-side of the engine. Move the switch up or down to adjust it until the switch operates and turns on the brake lamp after the brake pedal begins to be depressed.

NOTE
The recommended brake fluid : DOT4

5. Fasten the cap.
Inspect the tire pressure and the tire thread depth periodically. Inspect frequently the tire pressure for the safety and the tire life.

**WARNING**

Failure to follow these warnings may result in an accident due to tire failure. The tires on your motorcycle form the crucial link between your motorcycle and the road.

Follow these instructions:
- Check tire condition and pressure, and adjust pressure before each ride.
- Avoid overloading your motorcycle.
- Replace a tire when worn to the specified limit, or if you find damage such as cuts or cracks.
- Always use the size and type of tires specified in this owner's manual.

**TIRE PRESSURE**

Insufficient air pressure in the tires not only hasten tire wear but also seriously affects the stability of the motorcycle. Under-inflated tires make smooth cornering difficult and over-inflated tires decrease the amount of tire in contact with the ground which can lead to skids and loss of control. Be sure that the tire pressure is within the specified limits at all times.

Tire pressure should only be adjusted when the tire is cold.

If you see the problem with the tire, adjust the pressure with the pressure gauge.

<table>
<thead>
<tr>
<th>TIRE PRESSURE (COLD INFLATION)</th>
<th>NORMAL RIDING</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>SOLO RIDING</td>
</tr>
<tr>
<td>FRONT</td>
<td>2.25 kg/cm²</td>
</tr>
<tr>
<td></td>
<td>221 kpa</td>
</tr>
<tr>
<td></td>
<td>33.0 psi</td>
</tr>
<tr>
<td>REAR</td>
<td>2.50 kg/cm²</td>
</tr>
<tr>
<td></td>
<td>245 kpa</td>
</tr>
<tr>
<td></td>
<td>36.0 psi</td>
</tr>
</tbody>
</table>

**CAUTION**

If there are some problem with the tire pressure or cracks and cuts, it will decrease the riding stability and lead to flat tire.

**CRACKS AND CUTS**

Check if
1) there are visible cracks and cuts.
2) there are pebbles stuck.

[Diagram showing a tire with cracks and cuts]
Operating the motorcycle with excessively worn tire will decrease riding stability and can lead to loss of control. Inspect storage of tire thread's depth by the "tire wear indicator". Replace the front and rear tires at once when appear the "tire wear indicator".

⚠️ CAUTION

The standard tire on are 120/60-ZR 17 55W for front, and 160/60-ZR 17 69W for rear. The use of a tire other than standard may cause trouble. It is highly recommended to use the standard tire supplied by Hyosung.

🔍 REAR AXLE NUT
Inspect the rear axle shaft and jointing nut for loosening.

🔍 TIRE REPLACEMENT

● FRONT TIRE REPLACEMENT
1. Place the motorcycle on the jack or block.

2. Loosen the four front axle pinch bolt (right and left).
3. Loosen the front axle.
4. Carefully position a jack or block under engine and raise until the front wheel is slightly off the ground.

5. Draw out the axle shaft.
6. Slide the front wheel forward.
7. To reinstall the wheel assembly, reverse the sequence as described.

● REAR TIRE REPLACEMENT
1. Place the motorcycle on the jack or block.

CAUTION

Improper jacking may cause damage to the oil filter. Do not apply the jack head to the oil filter when jacking up the motorcycle.
2. Loosen the rear axle.
3. Carefully position a jack or block under engine and raise until the rear wheel is slightly off the ground.

**WARNING**

A hot muffler can burn you.
The muffler will be hot enough to burn you for some time after stopping the engine.
Wait until the muffler cools to avoid burns.

4. Draw out the rear axle shaft.
5. Pull the rear wheel assembly rearward.
6. To replace the wheel, reverse the complete sequence listed.

**REPLACEMENT OF THE LAMP**

Requirement electric power of the lamp shown in the following chart.
When replace the damaged lamp, always use the equal capacity.
The use of a lamp other than rules may cause to excessive at the electric system or to damage the lamp.

<table>
<thead>
<tr>
<th>NAMES</th>
<th>CAPACITY</th>
</tr>
</thead>
<tbody>
<tr>
<td>Head lamp</td>
<td></td>
</tr>
<tr>
<td>HI</td>
<td>12V - H4 : 60W × 1</td>
</tr>
<tr>
<td>LO</td>
<td>12V - H4 : 55W × 1</td>
</tr>
<tr>
<td>Position</td>
<td>12V - W5W × 1</td>
</tr>
<tr>
<td>Brake / Tail lamp</td>
<td>12V - P21/5W × 1</td>
</tr>
<tr>
<td>Turn signal lamp</td>
<td>12V - RY10W × 4</td>
</tr>
<tr>
<td>License plate lamp</td>
<td>12V - W5W × 1</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
3. Disconnect the head lamp coupler.
4. Remove the dust cover ③ and socket spring ④.
5. After removing the bulb at the socket, replace the new bulb.
6. To install the head lamp, reverse the above sequence.

**CAUTION**

The use of a lamp other than rules may cause to occur the vehicle fire and to damage electric parts. Surely use only the lamp of proper capacity.

We suggest that you have 『Comet650 F1』 & 『Comet650 R1』's head lamp bulb replaced by your authorized **Hyosung** dealer or a qualified mechanic.
TURN SIGNAL LAMP

1. Remove the lens by removing the screw.
2. Push the bulb, turn it to the counter-clockwise, and pull it out.
3. After stick in the new lamp, assemble the lens.

CAUTION
Overtightening the screws may cause the lens to crack.

BRAKE / TAIL LAMP

1. Remove the rear seat.
   To remove the rear seat, insert the ignition key into the lock and turn it clockwise.

2. Turn the socket to the counter-clockwise and pull it out at the lamp housing.
3. Push the bulb, turn it to the counter-clockwise, and pull it out.
4. To fit the replacement of bulb, push it in and turn it to the clockwise while pushing.

LICENSE PLATE LAMP

1. Remove the socket under the rear fender.
2. Push the bulb, turn it to the counter-clockwise, and pull it out.
3. To fit the replacement of bulb, push it in and turn it of to the clockwise while pushing.

CAUTION
Overtightening the screws may cause the lens to crack.
TROUBLE SHOOTING

If the engine refuses to start, perform the following inspections to determine the cause.

Ignition System Check

1. Remove a spark plug and reattach to the spark lead.
2. While holding the spark plug firmly against the crankcase of the engine, push the starter switch with the ignition switch in the “ON” position, the engine stop switch in the “○” position, the transmission in neutral, the side stand up and the clutch disengaged.
   If the ignition system is operating properly, a blue spark should jump across the spark plug gap.
3. If there is no spark, clean the spark plug. Replace it if necessary. Retry the above procedure with the cleaned spark plug or new one.
4. If there is still no spark, consult your Hyosung dealer for repairs.

WHEN THE ENGINE REFUSES TO START

Performing the spark test improperly can cause a high voltage electrical shock or an explosion.
Avoid performing this check if you are not familiar with this procedure, or if you have a heart condition or wear a pacemaker. Keep the spark plug away from the spark plug hole during this test.

FUSE

The fuse box is located behind the rear seat. If the engine suddenly stops while running or any electrical system fails to operate then the fuse must be checked.
In case a fuse blows there is a 30A for main and 15A for head lamp spare fuse.

- 30A main fuse protects all electrical circuits.
- 15A head lamp fuse protects the head lamp and high beam indicator lamp.

CAUTION

Never use other than specified 30A or 15A fuse. Installing a fuse of incorrect rating may seriously damage the electrical system. You should consult your Hyosung dealer or a qualified service mechanic immediately.
● Engine Stalling
① Check the fuel supply in the fuel tank.
② Check the ignition system for intermittent spark.
③ Check the engine idle speed.

CAUTION
When occur any trouble, the best way is to consult your Hyosung dealer for repairs.

WHEN KEEPING FOR LONG PERIOD
1. Supply the enough fuel in the fuel tank.
2. Remove the battery from the motorcycle.

CLEANING PROCEDURE
A thorough cleaning of your motorcycle is a necessary part of maintenance and will help keep your motorcycle looking and performing its best. Proper cleaning can also extend the life of your motorcycle.

It is important to clean and inspect your motorcycle after every ride if it is used in mud, brush, grass, water, salt water, or very dusty conditions.

The build-up of mud, brush, grass, etc., especially on the engine and exhaust system, can reduce engine cooling, conceal damage, or increase wear of certain parts. It is important to remove all debris during cleaning.

CAUTION
High pressure washers can damage your motorcycle (especially the radiator pin).

High pressure washers such as those found at coin-operated car washes have enough pressure to damage the parts of your motorcycle. It may cause rust, corrosion and increase wear.

Do not use high pressure washers to clean your motorcycle.
Use a garden hose at low pressure to remove the majority of dirt or other debris. Hand wash your motorcycle with a mild soap or detergent and water. Try to thoroughly remove all dirt and debris without excessive water pressure. Cloth rags, washing mitts or cleaning brushes can be used, be careful with brushes as they may scratch plastic or painted surfaces. Rinse the motorcycle thoroughly with clean water. Dry all areas using a chamois or soft absorbent cloth.

**NOTE**
Avoid spraying or allowing water to flow over the following places:
- Ignition switch
- Fuel injection system
- Brake master cylinders
- Radiator fins
- Snorkel air intake for air cleaner
- Spark plug
- Fuel tank cap

**CAUTION**
Do not use parts cleaner to throttle body and fuel injection sensors.

Operating motorcycle with wet brakes can be hazardous. Wet brakes may not provide as much stopping power as dry brakes. This could lead to an accident. Test your brakes after washing motorcycle, while riding at slow speed. If necessary, apply brakes several times to let friction dry out the pads.

Follow the procedures in the "INSPECTION BEFORE RIDING" section to check your motorcycle for any problems that may have arisen during your last ride.

**WARNING**
Operating motorcycle with wet brakes can be hazardous. Wet brakes may not provide as much stopping power as dry brakes. This could lead to an accident. Test your brakes after washing motorcycle, while riding at slow speed. If necessary, apply brakes several times to let friction dry out the pads.

Follow the procedures in the "INSPECTION BEFORE RIDING" section to check your motorcycle for any problems that may have arisen during your last ride.
NOTE:
“---” = means the invisable parts.
**WARNING**

- Be fully aware of the owner's manual before operating and riding.
- Make sure to wear a helmet.
- Observe the restricted speed.
- Do not touch the muffler because it is hot.
- Do not make illegal modification for the safe riding.
- Take the inspection and the maintenance according to the regular checklist of the owner's manual.
- The checklist before riding:
  - Dashboard, horn, lamp, oil (brake, tire, air pressure, damage, abnormal wear and etc.)
- Use the Hyosung genuine oil.

**CAUTION**

- Do not load over maximum 1kg in the trunk.
- Do not put something affected easily by the heat because the inside of trunk may be heated.
- Do not put valuables or fragile in the trunk.
- Make sure the seat were locked, in case of riding with un-locked, it can cause an abnormal riding or dangerous in an emergency.
- Water can come into the trunk on washing and also be careful when something important is put in the trunk.
- Do not lay cloth piece in the trunk under the seat.
- It can be a cause of unexpected accident.
**WARNING**

- An improper tire pressure can cause difficulties in handling, serious injuries or death.
- Before riding, inspect the tire pressure, damage, abnormal wear and etc. according to the "Inspection Before Riding".
- Always maintain a proper tire pressure as shown in the below.
