This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners’ meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

</table>

8. Four from:
- Is an example of online processing
- Requires immediate response
- Involves the use of sensors/temperature sensors are used in central heating
- Physical variables/temperature is monitored continuously
- Requires the use of feedback
- The output affects the input
- Heater switched on increases temperature
- Temperature above preset level causes microprocessor to switch off heater/ temp below preset level causes microprocessor to switch heater on

9. (a) Four from:
- Data is read by sensors/downloaded from onboard computer/entered using keyboard/touch screen/answers to questions are typed in
- Uses interactive interface/Asks questions... … based on previous responses
- Expert system analyses data
- Inference engine compares data
- Compares data with that held in the knowledge base... … using rules base
- Matches are found
- System suggests possible faults/solutions

9. (b) Two from:
- medical diagnosis
- Prospecting
- Tax
- Careers
- Chess games
- Animal/plant classification/identification
### 10 (a) 
One mark for check, One mark for description from:
- **Range check**
  - Number must be no lower than zero/no higher than highest number/158
- **(Invalid) character/type check**
  - Only digits can be entered – no other characters

### 10 (b) 
Must be different to (a)
One mark for check, One mark for description from:
- **Boolean check**
  - Data must be true or false/N or Y
- **(Invalid) character/type check**
  - Only alphabetic characters can be entered/no digits
- **Length check**
  - Must be exactly one character

### 10 (c) 
Must be different to (a) and (b)
One mark for check, One mark for description from:
- **Format check**
  - Data must be two digits followed by slash followed by two digits followed by slash followed by two digits
- **(Invalid) character/type check**
  - Only digits or slashes can be entered/no alphabetic or punctuation marks other than slash
- **Length check**
  - Must have the same number of characters/be no more and no less than 8 characters
- **Range check**
  - Day must be <32/Month must be less than 13/year must be <100/All must be >0/Whole date must be < today

### 11 
- **To input text from a printed document**
  - **Bar code reader**
  - **1**
- **To input data from a bank cheque**
  - **Chip reader**
  - **1**
- **To input data from a bank card**
  - **MICR**
  - **1**
- **To input data about a product at a POS**
  - **OCR**
  - **1**

</table>
17. **Four** from:
- Microprocessor controlled devices do much of housework
- Do not need to do many things manually
- Do not need to be in the house when food is cooking
- Do not need to be in the house when clothes are being washed
- Can leave their home to go shopping/work at any time of the day
- Greater social interaction/more family time
- More time to go out/more leisure time/more time to do other things/work
- Are able to do other leisure activities when convenient to them
- Can lead to unhealthy eating due to dependency on ready meals
- Can lead to laziness/lack of fitness
- Can encourage a healthy lifestyle because of smart fridges analyzing food constituents
- Microprocessor controlled burglar alarm provides a sense of security
- Do not have to leave home to get fit
- Manual household skills are lost

<td></td>
</tr>
</tbody>
</table>

18 (b) Computers work in digital  
Sensors produce analogue data  

18 (c) **Five** max. from:

- Temperature is compared with preset value
- If lower microprocessor switches on heater
- If lower microprocessor shuts windows
- If higher microprocessor switches heater off
- If higher microprocessor switches fan on
- If higher microprocessor opens windows
- Humidity is compared with preset value
- Moisture level is compared with preset value
- If lower microprocessor switches on sprinkler
- If higher microprocessor switches off sprinkler
- Light is compared with preset value
- If lower microprocessor switches on light bulb
- If higher microprocessor switches off light bulb

If reading is at the preset value then no action is taken by microprocessor
