Shree Hospital – through the Department of Pathology provides a full range of diagnostic and assessment services. The Departments provide microscopic examinations of tissue samples, blood tests, drug monitoring, viral studies, body fluid analyses, and other tests, with a wide range of subspecialty areas.

Radiology involves the application of imaging technology like X-ray and radiation for diagnosing and treating diseases. The Radiology Department at Shree Hospital is well-appointed for carrying out routine as well as special X-ray investigations with the supervision of experienced radiologists and competent personnel.

Sonography
Sonography is the simplest, cheapest modality available as a base-line evaluation for pregnancy and other multi-system functions.

Mammography
Mammography is a specific type of imaging that uses a low-dose x-ray system to examine breasts. A mammography exam, called a mammogram, is used to aid in the early detection and diagnosis of breast diseases in women.

Endoscopy
Colposcopy is the direct magnified inspection of the surface of a woman's genital area, including the cervix, vagina, and vulva, using a light source and a binocular microscope.

Gastroscopy
Gastroscopy is an examination of the inside of the gullet, stomach and duodenum. It helps in detecting if any damage is done to the lining of the esophagus (gullet) or stomach, and whether there are any ulcers in the stomach or duodenum.

Colonoscopy
A colonoscopy is a test to look at the inside of your colon. The colon is the large intestine and the last part of your digestive system.
