AL: Air-lock 101 Device

The Air-Lock pressure static device (model AL) is composed of a TP Pneumatic pressure switch (see page 30) combined with 2 x 3 way valves ND 1/4" (see page 16) in a single body. The Air-Lock pressure static device is mounted on pneumatic actuators when they need to be isolated from control devices (for example positioners or electro-pneumatic distributors) in the event air pressure falls below the pre-determined operating safety point. The Air-Lock device consists mainly of a pneumatic pressure switch with an adjustable set point. This device synchronously drives the 2 x 3 way valves. The switching device operates immediately, even in the case of a gradual air-pressure decrease to the set value. The device will automatically reset after a failure when the line pressure is 1 bar greater than set pressure, to avoid instability around the device set point.

Key features

> Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

> Exclusive STI design for double 3 way valve in one body, to reduce assembly time, space and cost

> Small dimension and lightweight

Benefits

> Accurate pressure setting
> Set screw lockable with nut
> Insensitive to vibrations
> Reset hysteresis with established safety

> Synchronous drive for set pressure group + 2 x 3 way valve in one body

Dimensional drawing
The Volume Booster (model AV), available sizes 1/4" and 3/4", is designed to meet high speed control valve applications. It produces a high volume boosting action and contains an integral stabilizing by-pass valve controlled by a screwdriver adjustment in the body. By opening this valve it is possible to improve the stability of the pneumatic circuit made up of a positioner, volume booster(s) and actuator.

Key features

Exclusive manifold mounting system. It is a special STI application to connect our accessories. Fittings or nipples are not necessary as the connection is achieved using machined connection faces with sealing ‘o’ ring. This system saves time for assembly, reduces cost on items such as fittings, reducing inventory and the shortened dimensions save space.

Benefits

> Safety
   The regulation screw cannot be ejected by the internal air pressure. The regulation screw is accurate and lockable

> Increased environment protection
   The exhaust is protected by double differentiated mesh

> Cost saving
   Suitable for one air connection to feed both volume boosters on a double acting actuator

> Design advantages
   Less leakage, more repeatability. Using a conical plug seat with controlled deformation for elastomeric air-tight

Dimensional drawing for AV 3/4"
BD: Derivative Booster

The Derivative Booster (model BD) is used in conjunction with a positioner on a control valve to increase stroking speed on pneumatic double acting actuators. It has been designed to exhaust one actuator chamber and pressurize the other at the same time. In this way, a short stroking time in one direction can be achieved using just one device. This item is activated by the exhaust flow of the positioner.

Key features

Exclusive manifold mounting system. It is a special STI application to connect our accessories. Fittings or nipples are not necessary as the connection is achieved using machined connection faces with sealing ‘o’ ring. This system saves time for assembly, reduces cost on items such as fittings, reducing inventory and the shortened dimensions save space.

Benefits

> **Unique simultaneous chamber charge and exhaust**
  The design exhausts one chamber and simultaneously charges the other one. The number of accessories can be reduced because the standard device works only on one chamber. The derivative booster works on both at the same time

> **Safety - more sensitivity - more accuracy**
  The regulation screw cannot be ejected by internal air pressure. Regulation screw accurate and lockable. Two adjusting screws: one to adjust the activation (Switch ON positioner flow level) and the other one to adjust the deactivation (Switch OFF positioner flow level)

> **Unique metal piston design**
  With high-integrity diaphragm

> **Suitable for:**
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

> **Collectable exhaust**
(Silencer/protection/check valve). Suitable for SL exhaust protection system

> **Compact design**
Compact dimensions compared with other high CV options available

> **CV limiter device**
Available as an option

> **Charge/exhaust ratio**
The optimal selected CV ratio between exhaust and charge is 2. This ratio optimizes the increase in speed without compromising modulating stability

> **Pilot CV**
The derivative booster can be piloted by positioner with CV between 0.3 to 1. For ON/OFF execution, the derivative booster can be piloted with a minimum CV 0.3

Dimensional drawing

![Dimensional drawing image]
BV: Big Volume Booster

The Big Volume Booster (model BV) is designed to meet high speed control applications. It produces a high volume boosting action and contains an integral stabilizing by-pass valve, adjusted by a screwdriver turning the adjustment screw in the body. By opening this valve it is possible to improve the stability of the positioner – volume booster – actuator circuit. BV was specifically designed to be piloted by a high CV positioner (such as our FT Positioner).

Key features

Exclusive manifold mounting system. It is a special STI application to connect our accessories. Fittings or nipples are not necessary as the connection is achieved using machined connection faces with sealing o’ring. This system saves time for assembly, reduces cost on items such as fittings, reducing inventory and the shortened dimensions save space.

Benefits

> Safety
  Regulation screw is not ejectable by internal air pressure. Regulation screw is accurate and lockable

> Big CV
  Unique high value of CV in one device

> Unique metal piston design
  Without deformable diaphragm

> Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

> Collectable exhaust
  (Silencer/protection/check valve). Suitable for SL exhaust protection system

> Compact design
  Compact dimensions compared with other high CV options available

The best levels of performance are achieved when the booster is piloted by our FT Smart Positioner (see dedicated brochure)
BW: Ultra High Capacity Booster

The Ultra High Capacity Booster (model BW) is designed to meet high volume boosting requirements. The volume booster contains two activation regulators, one for supply amplification adjustment and the other for exhaust amplification adjustment.

Key features

Exclusive manifold mounting system. It is a special STI application to connect our accessories. Fittings or nipples are not necessary as the connection is achieved using machined connection faces with sealing o’ring. This system saves time for assembly, reduces cost on items such as fittings, reducing inventory and the shortened dimensions save space.

Benefits

- **Suitable for:**
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

- **Safety**
  Regulation screw is not ejectable by internal air pressure. Regulation screw is accurate and lockable

- **Independent calibration for charge and exhaust**
  Separate and independent amplification setting for supply and exhaust, making tuning easier to perform

- **Big CV**
  Unique high value of CV in one device

- **Unique metal piston design**
  Without deformable diaphragm

- **Collectable exhaust**
  (Silencer/protection/check valve). Suitable for SL exhaust protection system

- **Compact design**
  Compact dimensions compared with other high CV options available

13
CF: Fast Commutator

The Fast Commutator (model CF) is designed to be combined with two 3-way valves providing a shared pilot conduit. This accessory is designed to operate with a pilot pressure greater than 2 bar while still maintaining a perfect seal on the seats of up to 8 bar. As the pilot fluid goes to work on moving a single membrane, switching speed is maximised.

**Key features**

This exclusive manifold mounting system is a specially designed STI application for connecting our accessories. Fittings or nipples are not necessary as the connection is achieved using machined connection faces with a sealing ‘o’ ring. This system saves assembly time, reduces cost on other items such as fittings, inventory and the reduced dimensions save space.

> Suitable for:
- Standard, offshore, sandstorm and copper-free ambient conditions
- Double acting actuators
- Low and high ambient temperature

> Designed to work with FT positioner only or in conjunction with BV/BW boosters (see dedicated brochures)

> Optional integrated Piezo solenoid valve for fail freeze function

> SIL certified

> Constituted by two 3-way valves having the pilot conduit in common

> Up to 3 units can be mounted on the same positioner to achieve multiple functions:
- Quick open
- Quick close
- Lock in place

Optional Piezo solenoid valve for optional fail freeze function
Benefits

> Compact dimensions
> Without deformable diaphragm
> Can save cost over some bigger 3-way valves even if SIL rating required
> Switching will be very fast even if piloted by low CV solenoid valve

Technical specifications

Dimensional drawing
CO: 3-Way Pneumatic Operating Valve

The 3-Way Pneumatic Operating Valve (model CO) is pilot operated, and designed for high flow applications. The 3-way valve is available in sizes ¼”, ½”, 1”, 1½” and 2”. The valve can be used in one or more synchronous units piloted by a pneumatic pressure switch or solenoid valve (or both) in order to achieve safety, trip or shut down function.

Key features

Exclusive manifold mounting system. It is a special STI application to connect our accessories. Fittings or nipples are not necessary as the connection is achieved using machined connection faces with sealing ‘o’ ring. This system saves time for assembly, reduces cost on items such as fittings, reducing inventory and the shortened dimensions save space.

Benefits

> **Size 1/4”**
  2x3 way valves in one body, reduced dimensions

> **Sizes 1 1/2” - 2”**
  Pilot quick exhaust valve included

> **Sizes 1 1/2” - 2”**
  Large size 3 way valve with a special device to switch quickly when in the de-energized position, even when controlled by a low CV pilot

> **Sizes 1/2” - 1” - 1 1/2” - 2”**
  Perfect tight shut off regardless of the flow direction up to 7 bar with pilot pressure over 2 bar when energized

> **Sizes 1/2” - 1” - 1 1/2” - 2”**
  SIL 3 certified

> **Suitable for:**
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

Suitable for low and high ambient temperatures

CS: Quick Exhaust

The Quick Exhaust (model CS) is a two-way valve used for on/off movement (trip or fail) to fully exhaust the connected chamber of the actuator. When this device is pilot operated and mounted on a modulating actuator it allows quick exhausting of the connected chamber, even when piloted by a small CV device.

Key features

> Suitable for:
  - Standard, offshore, sandstorm or copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature
  - Internal actuator damper
  - SL exhaust protection system (from 1 to 3 max SL) depending on exhaust flow requirement

Benefits

> Compact design
> Big exhaust CV (up to 60)
> Metal piston operated (diaphragm free)
> Flange mounted on actuator cap

The Manual Override (model GR) is designed to manually move the actuator stem using a handwheel. The internal gear is mounted on ball bearings for high efficiency and for long operating life. All STI actuators may be equipped with a manual override to allow operation of the control element when instrument air is not available and the actuator has to be operated manually. Several sizes are available according to the actuator required. For STI actuators series SCV the gear box is mounted between the actuator and the yoke, for the SC series it is mounted on the actuator stem cap side. The manual override can be used as an adjustable retraction stroke limiter. A specific version can be direct mounted to operate a valve where no actuator is installed.

### Key features

- Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

### Benefits

- Internal gear mounted on ball bearings to minimize operator effort and long operation life
- Available with sandstorm design with stem and main screw bellows
- Available to lock movement in any position to keep valve in any required position
- Available with adjustable thrust limiter
- Available with mechanical chain transmission of the manual override for remote operator access

The Motion Converter (model MC) is suitable for the easy installation of rotary positioners on linear actuators. The device is available with an adjustable and changeable coupling kit to connect with different positioners or accessories. The coupling kit is designed to avoid radial forces on the mounted accessories (such as positioners, position transmitters or limit switches mounted into a box). The conversion from linear actuator and valve stem movement to rotary movement is made with a lever mechanism designed to minimize the linearity error in a simple, robust construction in a small box. The motion converter removes the imprecise effect of a traditional system lever/pin arrangement. In a traditional feedback arrangement on valves with small stroke lengths, performance is lost due to the short linear stroke of the actuator/valve stem. This problem is removed when the MC device is used.

**Key features**

> Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature
  - Linear actuators

**Benefits**

> No exposed long/arm/lever moving during actuator stroke
> Small dimensions are not affected by the length of the actuator stroke
> Significant reduction in linearity error when compared with the best ever/arm/pin system (50% less than the next best system available in the market)
> Robust construction not affected by dust, ice, temperature and other contaminants
> Self cleaning system
> No noise during operation
> Maintenance free
> Adaptable at every stroke in the field
> 90° exit angle
> Backlash recovery system
Technical specifications

Housing materials
Anodized aluminium
Stainless steel 316

Operating temperature*
-40°C to 120°C

Minimum stroke cam std
>70mm

Pilot signal connection
1/4” NPT

Output angle
90°

Linearity error
1.1% for stroke up to 90 → 400

Weight
Aluminium = 1.2kg
Stainless steel 316 = 2.7kg

* Lower or higher temperature available on request

Dimensional drawing

[Diagram of the mechanical components with dimensions]
The Snap Acting Relay (model SAR) is a narrow-band pneumatic controller with an adjustable setpoint. Pressure in the input chamber opposes the load on the adjusting spring. Whenever this input pressure exceeds the spring setting, the input signal seat will be closed and the open supply seat will allow full supply pressure to pass directly to the output. Conversely, whenever the input pressure is below the spring setting, the supply seat will be closed and the signal seat will be open. The output, in this case, will be equal to the signal. Generally used for the input signal of pneumatic controlled positioners.

**Key features**

- Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

**Benefits**

- Compact design
- Lockable adjusting screw
- Adjusting screw safety design
- Precise switching pressure and low hysteresis

The Exhaust Protection System (model SL) has excellent exhaust and silencing characteristics with minimal resistance to air flow. In addition, it has an integral check valve that enables the maximum IP protection. This product is made with special polymeric material which is compliant with ATEX directives for use in an explosive atmosphere. The exhaust protection system is designed to incorporate a very low back-pressure, ensuring a very high exhaust flow.

Key features

> Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

Benefits

> High exhaust flow
> The dissipation of exhaust flow energy is through a cage labyrinth system. This is self cleaning and therefore minimises clogging
> Includes an integral check valve that maintains a very low back-pressure to permit quick opening. This allows high dynamic movement and the check valve will close immediately when the exhaust flow stops
> Where the SL system is installed the internal check valve also protects devices from dust or other materials when there is no exhaust flow
> The special design of the labyrinth allows installation in any orientation, minimizing the ingress or storage of water into the SL system
> Made of stainless steel and plastic material suitable for use in hazardous areas (To ATEX standard)

TP: Pneumatic Pressure Switch

The Pneumatic Pressure Switch (model TP) device has been designed to drive lock-up devices to the safety shut down position in the event supply air pressure falls below the operating safety value. The switching value is easily adjustable and the device allows maintainers to set the switching pressure required to activate the switch in the safety/shut down function. The switching device operates immediately, even in the case of a gradual air-pressure decrease to the set value. The device will automatically reset after a failure, when the line pressure is 1 bar greater than set pressure to avoid instability around the device set point.

Key features

- Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

Benefits

- Accurate pressure setting
- Set screw lockable with nut
- Insensitive to vibrations
- Small dimensions and light weight allows mounting on lock-up 3 way valve
- Reset hysteresis with established safety

Technical specifications

Housing materials
- Anodized aluminum
- Stainless steel 316

Operating temperature*

UD: Derivative Unit

The Derivative Unit (model UD) is a specific device to amplify the exhaust. The regulating system is specifically designed for modulation and allows an accurate calibration (tuning) to maximize speed without compromising the stability of the actuator. Designed to be used with precision and easy tuning in control systems (amplification of exhaust positioner flow) and also for on/off systems.

Key features

Exclusive manifold mounting system. It is a special STI application to connect our accessories. Fittings or nipples are not necessary as the connection is achieved using machined connection faces with sealing ‘o’ ring. This system saves time for assembly, reduces cost on items such as fittings, reducing inventory and the shortened dimensions save space.

Benefits

- Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature
- Collectable exhaust ND 3/4" NPT

Stainless steel 316 manifold mounting

Aluminium manifold mounting

High sensitivity

Key features

- Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature
- Collectable exhaust ND 3/4" NPT

Benefits

- High sensitivity
- The specific design allows for accurate regulation of activation on modulating systems
- Activation system available in 2 versions for pilot
- CV flow between 0.1 and 0.8 and for pilot CV flow between 0.8 and 2.5
- High exhaust CV
- Regulation system available to modulate exhaust CV between 0 and 3.8
- Adjustable every 90° actuator connection design
- Full tight zero leakage
- Regulation screw cannot be ejected by internal air pressure
Technical specifications

**Housing materials**
- Anodized aluminium
- Stainless steel 316

**Operating temperature**
- -20°C to 70°C
- -40°C to 70°C available on request
- -20°C to 85°C available on request

**Exhaust connections**
- 3/4" NPT

**Pilot signal connection**
- 1/2" NPT

**CV max**
- Exhaust = 3.8

**Operating pressure**
- P min = 3 bar
- P max = 7 bar
- Design pressure = 10 bar

**Actuator connections**
- Manifold mounting
- 1/2" NPT

**Weight**
- Aluminium = 1kg
- Stainless steel 316 = 2.7kg

* Lower or higher temperature available on request

2030: Electronic Position Transmitter

The Electronic Position Transmitter (model 2030) is suitable for installation on quarter turn and linear actuators. It has been designed to meet various industrial application requirements, for example on-board pneumatic actuators. The enclosure has the capability to house a wide range of either mechanical or inductive limit switches (up to 4). A shaft with a manually-adjustable cam is used for accurate and easy setting of the limit switches which are pre-wired to a terminal strip.

Key features

> Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature
  - Quarter turn and linear actuators

> Designed to be coupled with STI motion converter device

Benefits

> Contactless sensor
> Easily configurable for 30-90° angles
> Direct or reverse action
> Explosion proof version
> Position transmitter / Position transmitter + Limit switch version available
> Available with integrated limit switches

Electrical certifications

> Protection degree: IP66
> Hazardous area certification: ATEX EExd II 2 G EEx d IIC T6
> CE and EMC certifications
Technical specifications

Housing materials
Painted RAL 9005 aluminium
Stainless steel 316 (without limit switches)

Operating temperature
-40°C to 85°C

Accuracy (*)
<0.5% (including linearity, repeatability and hysteresis)

Loop supply effect (*)
<0.2% on the full supply range

Temperature drift (*)
<0.3% every 10°C

Response time
<0.2 seconds

Output
4-20 mA (passive loop)

Operating angle
30° - 90°

Action
Direct or reverse locally configurable by a simple switch

Supply range
12 to 32 Vdc, reverse polarity protected

Zero and span adjustment
Locally adjustable with screw driver

Weight
TR aluminium = 1.6 kg
TR + LS aluminium = 2.2 kg
TR stainless steel 316 = 5 kg

*Assuming 90° angle

2130: Limit Switch

The Limit Switch (model 2130) is suitable for installation on rotary motion. It has been designed to meet various industrial application requirements, for example on board pneumatic actuators. The enclosure has the capability to house a wide range of either mechanical or inductive limit switches. A shaft with manually-adjustable cam is used for accurate and easy setting of the limit switches, which are prewired to a terminal strip.

Key features

- Suitable for:
  - Standard, offshore, sandstorm and copper-free ambient conditions
  - Single and double acting actuators
  - Low and high ambient temperature

Benefits

- Up to 4 limit switches
- Mechanical or Inductive limit switch
- Gold plated limit switch option available
- Easy adjustable independent cam for switch position adjustment
- Easy access, robust terminal board suitable for 2.5mm² wires

Electrical certifications

- Protection degree: IP66
- Hazardous area certification: ATEX EExd II 2 G Ex d IIC T6
- CE and EMC certifications
Technical specifications

Housing materials
Painted RAL 9005 aluminium

Operating temperature
-40°C to 85°C

Weight
2.2 kg

Other Products

**Linear actuators**

Our pneumatic valve piston actuators (SC/V) drive control valves for the most demanding applications in Power and Oil & Gas.

Thanks to the patented design of the piston, this series of actuators give smooth and precise valve operation without any maintenance for the whole operating life.

Our pneumatic damper actuators (SC) are purposely designed and manufactured for the operation of flow control devices such as dampers, louvres, butterfly and ball valves. Thanks to their design, they are the ideal application in power plants, refineries, pipe steel works and on board vessels.

**Quarter-turn actuators**

Our RT Series offers a complete range of pneumatic and hydraulic quarter-turn actuators to withstand the most hostile environmental conditions. They are suitable for all on-shore and off-shore applications, covering the general on-off valve and modulating control valve duties. The RT Series is designed to provide maximum reliability and flexibility for valves in all pressure classes.

**Control drive actuators**

This pneumatic actuator system (CML & CMV) is composed of an actuator and a manual override integrated into a steel housing which works also as a carrying structure. This rugged construction guarantees continuous operation in harsh environments, such as power stations, steel industries, petrochemical plants and deserts.

**Positioners**

We offer a wide range of positioners: pneumatic or electro-pneumatic, smart (very high flow rate) or “traditional type”.
