**CASTILE PELLET STOVE**

Owner’s Manual
Installation and Operation

Model:
CASTILE-MBK
CASTILE-PMH
CASTILE-CLG
CASTILE-CCR

---

**CAUTION**

**DO NOT DISCARD THIS MANUAL**

- Important operating and maintenance instructions included.
- Read, understand and follow these instructions for safe installation and operation.
- Leave this manual with party responsible for use and operation.

---

**WARNING**

Please read this entire manual before installation and use of this pellet fuel-burning room heater. Failure to follow these instructions could result in property damage, bodily injury or even death.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- Do not overfire - If any external part starts to glow, you are overfiring. Reduce feed rate. Overfiring will void your warranty.
- Comply with all minimum clearances to combustibles as specified. Failure to comply may cause house fire.

---

**CAUTION**

Tested and approved for wood pellets and shelled field corn fuel only. Burning of any other type of fuel voids your warranty.

---

**WARNING**

HOT! DO NOT TOUCH. SEVERE BURNS MAY RESULT. CLOTHING IGNITION MAY RESULT.

Glass and other surfaces are hot during operation and cool down.

- Keep children away.
- CAREFULLY SUPERVISE children in same room as appliance.
- Alert children and adults to hazards of high temperatures.
- Do NOT operate with protective barriers open or removed.
- Keep clothing, furniture, draperies and other combustibles away.

---

**CAUTION**

Check building codes prior to installation.

- Installation MUST comply with local, regional, state and national codes and regulations.
- Consult local building, fire officials or authorities having jurisdiction about restrictions, installation inspection, and permits.
Congratulations and Welcome to the Quadra-Fire Family!

Hearth & Home Technologies welcomes you to our tradition of excellence! In choosing a Quadra-Fire appliance, you have our assurance of commitment to quality, durability, and performance.

This commitment begins with our research of the market, including ‘Voice of the Customer’ contacts, ensuring we make products that will satisfy your needs. Our Research and Development facility then employs the world’s most advanced technology to achieve the optimum operation of our stoves, inserts and fireplaces. And yet we are old-fashioned when it comes to craftsmanship. Each unit is meticulously fabricated and gold and nickel surfaces are hand-finished for lasting beauty and enjoyment. Our pledge to quality is completed as each model undergoes a quality control inspection. From design, to fabrication, to shipping: Our guarantee of quality is more than a word, it’s Quadra-Fire tradition, and we proudly back this tradition with a Limited Lifetime Warranty.

We wish you and your family many years of enjoyment in the warmth and comfort of your hearth appliance. Thank you for choosing Quadra-Fire.

With warm regards,

Annie Travises
Vice President/Dealer Channel

Jason Olmstead
President/General Manager

SAMPLE OF CLEARANCE TO COMBUSTIBLES LABEL
LOCATION: Back side of left side panel.

FLOOR PROTECTION / PROTECTION DU SOL

*Un protecteur incombustible de plancher doit s’étendre sous le conduit de cheminée pour une installation de ventilation horizontale ou sous un adaptateur de ventilation de dessus pour une installation verticale. ÉTATS-UNIS - RECOMMANDÉ: CANADA - REQUISIT!

Le protecteur doit être placé sur une assise non combustible équilibrée tout autour du conduit de cheminée, le long des murs qui le bordent, et l’endroit indiqué. Mesurez la distance du devant (S) de l’endroit de la surface de la petite porte.

</tr>
</tbody>
</table>

B. Mobile Home Approved

This appliance is approved for mobile home installations when not installed in a sleeping room and when an outside combustion air inlet is provided. The structural integrity of the mobile home floor, ceiling, and walls must be maintained. The appliance must be properly grounded to the frame of the mobile home and use only listed pellet vent Class “L” or “PL” connector pipe. A Quadra-Fire Outside Air Kit must be installed in a mobile home installation.

C. Glass Specifications

This appliance is equipped with 5mm ceramic glass. Replace glass only with 5mm ceramic glass. Please contact your dealer for replacement glass.

NOTE: This installation must conform with local codes. In the absence of local codes you must comply with the ASTM E1509, (UM) 84-HUD, ULC/ORD-C-1482

D. Electrical Rating

115 VAC, 60 Hz, Start 4.1 Amps, Run 1.1 Amps

E. BTU & Efficiency Specifications

<table>
<thead>
<tr>
<th>Particulate Emissions Rating:</th>

</table>

*BTU output will vary, depending on the brand of fuel you use in your stove. Consult your Quadra-Fire dealer for best results.

NOTE: Hearth & Home Technologies, manufacturer of this appliance, reserves the right to alter its products, their specifications and/or price without notice.
Getting Started

A. Design, Installation & Location Considerations

1. Appliance Location

Consideration must be given to safety, convenience, traffic flow, and the fact that the appliance will need a chimney and chimney connector. It is a good idea to plan your installation on paper, using exact measurements for clearances and floor protection, before actually beginning the installation. If you are not using an existing chimney, place the appliance where there will be a clear passage for a factory-built listed chimney through the ceiling and roof.

Check with your local building code agency before you begin your installation. Be sure local building codes do not supersede UL specifications and always obtain a building permit so that insurance protection benefits cannot be unexpectedly cancelled. If any assistance is required during installation, please contact your local dealer.

We recommend that a qualified building inspector and your insurance company representative review your plans before and after installation.

2. Thermostat Location

The thermostat's location will have some effect on the appliance's operation. When the thermostat is located close to the appliance, it may require a slightly higher temperature setting to keep the rest of the house comfortable. If the thermostat location is in an adjacent room or on a different floor level, you will notice higher temperatures near the appliance.

B. Fire Safety

Maintain the designated clearances to combustibles. Insulation must not touch the chimney. You must maintain the designated air space clearance around the chimney. This space around a chimney is necessary to allow natural heat removal from the area. Insulation in this space will cause a heat buildup, which may ignite wood framing. **NOTE:** Clearances may only be reduced by means approved by the regulatory authority having jurisdiction.

To provide reasonable fire safety, the following should be given serious consideration:

1. Install at least one smoke detector on each floor of your home to ensure your safety. They should be located away from the heating appliance and close to the sleeping areas. Follow the smoke detector manufacturer's placement and installation instructions, and be sure to maintain regularly.

2. A conveniently located Class A fire extinguisher to contend with small fires resulting from burning embers.

3. A practiced evacuation plan, consisting of at least 2 escape routes.

4. A plan to deal with a hopper fire as follows:

   In the event of a hopper fire:
   
   A. Notify fire department
   B. Prepare occupants for immediate evacuation.
   C. Close all openings into the appliance.
   D. While awaiting fire department, watch for ignition of adjacent combustibles from overheated vent pipe, hot embers or sparks from the chimney.
   E. Pour a bucket of water into the appliance hopper.

**WARNING**

Fire Hazard.

- Do not operate appliance before reading and understanding operating instructions.
- Failure to operate appliance properly may cause a house fire.

**CAUTION**

- Do NOT connect this unit to a chimney flue servicing another appliance.
- Do NOT connect to any air distribution duct or system.
C. Tools And Supplies Needed

<table>
<thead>
<tr>
<th>Tools and building supplies normally required for installation, unless installing into an existing masonry fireplace:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reciprocating Saw</td>
</tr>
<tr>
<td>Channel Locks</td>
</tr>
<tr>
<td>Hammer</td>
</tr>
<tr>
<td>Phillips Screwdriver</td>
</tr>
<tr>
<td>Tape Measure</td>
</tr>
<tr>
<td>Plumb Line</td>
</tr>
<tr>
<td>Level</td>
</tr>
<tr>
<td>Framing Material</td>
</tr>
<tr>
<td>Gloves</td>
</tr>
</tbody>
</table>

D. Measuring Standards

1. Pipe measurements are from center line to center line.
2. Vertical terminations are measured to top of pipe.

![Figure 6.1]

Measure vertical clearances from this surface

Measure horizontal clearances from this surface

E. Inspect Appliance & Components and Pre-Use Check List

1. Place the appliance in a location near the final installation area and follow the procedures below:

2. Open the appliance and remove all the parts and articles packed inside the Component Pack. Inspect all the parts and glass for shipping damage. Contact your dealer if any irregularities are noticed.

3. All safety warnings have been read and followed.

4. This Owner’s Manual has been read.

5. Floor protection requirements have been met.

6. Venting is properly installed.

7. The proper clearances from the appliance and chimney to combustible materials have been met.

8. The masonry chimney is inspected by a professional and is clean, or the factory built metal chimney is installed according to the manufacturer’s instructions and clearances.

9. The chimney meets the required minimum height.

10. All labels have been removed from the glass door.

11. Plated surfaces have been wiped clean, if applicable.

12. Thermostat or remote has been installed.

13. A power outlet is available nearby.

![WARNING]

Fire Risk.

Hearth & Home Technologies disclaims any responsibility for, and the warranty will be voided by, the following actions:

- Installation and use of any damaged appliance.
- Modification of the appliance.
- Installation other than as instructed by Hearth & Home Technologies.
- Installation and/or use of any component part not approved by Hearth & Home Technologies.
- Operating appliance without fully assembling all components.
- Operating appliance without legs attached (if supplied with unit).
- Do NOT Overfire

Or any such action that may cause a fire hazard.

WARNING

Inspect appliance and components for damage. Damaged parts may impair safe operation.
- Do NOT install damaged components.
- Do NOT install incomplete components.
- Do NOT install substitute components.

Report damaged parts to dealer.

</tr>
</tbody>
</table>

**WARNING**

Fire Risk.
Comply with all minimum clearances to combustibles as specified.

Failure to comply may cause house fire.

**NOTE:**
- Illustrations reflect typical installations and are FOR DESIGN PURPOSES ONLY.
- Illustrations/diagrams are not drawn to scale.
- Actual installation may vary due to individual design preference.
C. Hearth Pad Requirements (UL and ULC)

Use a noncombustible floor protector, extending beneath appliance and to the front, sides and rear as indicated. Measure front distance "M" from the surface of the glass door.

<table>
<thead>
<tr>
<th>Hearth Pad Requirements</th>
<th>Inches</th>
<th>Millimeters</th>
</tr>
</thead>
<tbody>
<tr>
<td>K</td>
<td>2</td>
<td>51</td>
</tr>
<tr>
<td>L*</td>
<td>2</td>
<td>51</td>
</tr>
<tr>
<td>M</td>
<td>6</td>
<td>152</td>
</tr>
</tbody>
</table>

*L Exception for Horizontal Installations:

USA INSTALLATIONS: A noncombustible floor protection is recommended extending beneath the flue pipe when installed with horizontal venting or under the Top Vent Adapter with vertical installation.

CANADA INSTALLATIONS: A noncombustible floor protection extending beneath the flue pipe is required with horizontal venting or under the Top Vent Adapter with vertical installation.

Must extend 2 inches (51mm) beyond each side of pipe (shaded area)
4 Vent Information

A. Chimney and Exhaust Connection

1. **Chimney & Connector:** Use 3 or 4 inch (76-102mm) diameter type "L" or "PL" venting system. It can be vented vertically or horizontally.

2. **Mobile Home:** Approved for all listed pellet vent. If using the 3 inch (76mm) vertical Top Vent Adapter Kit or the 3 to 6 inch (76-152mm) Top Vent Offset Adapter, use listed double wall flue connector. A Quadra-Fire Outside Air Kit must be used with manufactured home installations.

3. **Residential:** The 3 inch (76mm) vertical Top Vent Adapter Kit and the 3 to 6 inch (76-152mm) Top Vent Offset Adapter are tested to use 24 gauge single wall flue connector or listed double wall flue connector to Class A listed metal chimneys, or masonry chimneys meeting ICBO standards for solid fuel appliances.

4. **INSTALL VENT AT CLEARANCES SPECIFIED BY THE VENT MANUFACTURER.**

5. Secure exhaust venting system to the appliance with at least 3 screws. Also secure all connector pipe joints with at least 3 screws through each joint.

**NOTE:** All pipe must be welded seam pipe whenever possible. Seal pipe joints with high temperature silicone (500°F [260°C] minimum rated only).

**NOTE:** If burning shelled field corn, you must use approved venting specifically designed for corn. Follow the instructions from the venting manufacturer.

---

**WARNING**

Fire Hazard.
- Only LISTED venting components may be used.
- NO OTHER vent components may be used. Substitute or damaged vent components may impair safe operation.

---

**WARNING**

Vent surfaces get HOT, can cause burns if touched. Noncombustible shielding or guards may be required.

---

B. Venting Termination Requirements

**CAUTION**

Do not terminate vent in any enclosed or semi-enclosed area such as a carport, garage, attic, crawl space, under a sun deck or porch, narrow walkway or closely fenced area, or any location that can build up a concentration of fumes such as a stairwell, covered breezeway, etc.

1. Termination must exhaust above air inlet elevation. It is recommended that at least 60 inches (1524mm) of vertical pipe be installed when appliance is vented directly through a wall. This will create a natural draft, which will help prevent the possibility of smoke or odor venting into the home during a power outage. It will also keep exhaust from causing a nuisance or hazard by exposing people or shrubs to high temperatures. The safest and preferred venting method is to extend the vent vertically through the roof.

2. Distance from doors and opening windows, or gravity or ventilation air inlets into building:
   a. Not less than 48 inches (1219mm) below;
   b. Not less than 48 inches (1219mm) horizontally from;
   c. Not less than 12 inches (305mm) above.

3. Distance between bottom of termination and grade should be 24 inches (610mm) minimum. This is conditional upon plants in the area, and nature of grade surface. The grade surface must be a noncombustible material (i.e., rock, dirt). The grade surface must not be lawn. Distance between bottom of termination and public walkway should be 84 inches (2134mm) minimum.

4. Distance to combustible materials must be 24 inches (610mm) minimum. This includes adjacent buildings, fences, protruding parts of the structure, roof overhang, plants and shrubs, etc.

5. **Termination Cap Location (Home Electrical Service)**
   - Side-to-side clearance is to be the same as minimum clearance to vinyl inside corners.
   - Clearance of a termination cap below electrical service shall be the same as minimum clearance to vinyl soffits.
   - Clearance of a termination cap above electrical service will be 12 inches minimum.
   - Location of the vent termination must not obstruct or interfere with access to the electrical service.
C. Equivalent Feet of Pipe

The table below can help you calculate the equivalent feet of pipe which is a method used to determine pellet vent size. See Figure 11.1

<table>
<thead>
<tr>
<th>Pellet Venting Component</th>
<th># of Elbows</th>
<th>Feet of Pipe</th>
<th>Multiplied By</th>
<th>Equivalent Feet</th>
<th>Components Equivalent Feet</th>
</tr>
</thead>

<td>7</td>
<td>7</td>
</tr>
<tr>
<td>Vertical Pipe</td>
<td>2</td>
<td>X</td>
<td>0.5</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>

Total Equivalent Feet: 23

Note: This is a generic example and is not intended to represent any specific fuel type.

Example of 3 Elbow-Rear Vent Termination Calculation

D. Pipe Selection Chart

The chart will help you in determining proper venting size according to the equivalent feet of pipe calculated above and the altitude above sea level of this installation. See Figure 11.2.

Locate the calculated equivalent feet of pipe on the vertical left side of the chart. Move to the right horizontally on the chart until you reach your altitude above sea level.

If you fall below the diagonal line, 3 or 4 inch (76 to 102mm) pipe may be used. If it is anywhere above the diagonal line, a 4 inch (102mm) diameter pipe is recommended.

The chart reveals that a 90° elbow is 5 times as restrictive to the flow of exhaust gases under positive pressure as 1 foot of horizontal pipe, and a foot of horizontal pipe is twice as restrictive as a foot of vertical pipe.
A. Alcove

![Diagram of Alcove Venting System]

</tbody>
</table>

All minimums listed are to a combustible surface.

**NOTE:**
- Illustrations reflect typical installations and are FOR DESIGN PURPOSES ONLY.
- Illustrations/diagrams are not drawn to scale.
- Actual installation may vary due to individual design preference.
B. Through The Wall

Horizontal termination cap must be a minimum of 12 inches. (305mm) from the wall. Approved for mobile home installa-
tions. Must use 3 or 4 inch (76-102mm) “L” or “PL” listed pellet venting or listed double wall pipe and a Quadra-Fire
Outside Air Kit in mobile homes.

NOTE:
In Canada, where passage through a wall or partition of
combustible construction is desired, the installation shall
conform to CAN/CSA-B365

---

**Straight Out**

2 in. (51mm) Minimum

2 in. (51mm) Minimum

Figure 13.2
C. Vertical

We recommend a minimum of 60 in. (1524mm) vertical, however above the eave is preferred.

Both installations are approved for mobile home installations. Must use 3 or 4 inch (76 to 102mm) “L” or “PL” listed pellet venting or listed double wall pipe and Quadra-Fire Outside Air Kit in mobile homes. Single wall pipe is approved for residential installations only.

D. Through The Wall & Vertical
E. Masonry

![Diagram of Masonry Chimney](image1)

**WARNING**

Fire Hazard
Inspection of Chimney:
- Masonry chimney must be in good condition.
- Meets minimum standard of NFPA 211
- Factory-built chimney must be 6” (152mm) UL103 HT.

F. Alternate Masonry

![Diagram of Alternate Masonry Chimney](image2)
A. Mobile Home Installation

You must use a Quadra-Fire Outside Air Kit for installation in a mobile home.

1. An outside air inlet must be provided for the combustion air and must remain clear of leaves, debris, ice and/or snow. It must be unrestricted while the appliance is in use to prevent room air starvation which causes smoke spillage. Smoke spillage can also set off smoke alarms.

2. The combustion air duct system must be made of metal. It must permit zero clearance to combustible construction and prevent material from dropping into the inlet or into the area beneath the dwelling and contain a rodent screen.

3. The appliance must be secured to the mobile home structure by bolting it to the floor (using lag bolts). Use the same holes that secured the appliance to the shipping pallet.

4. The appliance must be grounded with #8 solid copper grounding wire or equivalent, terminated at each end with an NEC approved grounding device.

5. Refer to clearances to combustibles and floor protection requirements on pages 8 & 9 for listings to combustibles and appropriate chimney systems.

6. Use silicone to create an effective vapor barrier at the location where the chimney or other component penetrates to the exterior of the structure.

7. Follow the chimney manufacturer’s instructions when installing the vent system for use in a mobile home.

8. Installation shall be in accordance with the Manufacturers Home & Safety Standard (HUD) CFR 3280, Part 24.

![Figure 16.1](image)

**CAUTION**

Maintain structural integrity of mobile home:
- Floor, wall, ceiling and/or roof.

Do NOT cut through:
- Floor joist, wall, studs or ceiling trusses.
- Any supporting material that would affect the structural integrity.

**WARNING**

Never draw outside combustion air from:
- Wall, floor or ceiling cavity
- Enclosed space such as an attic or garage

**WARNING**

**WARNING**

Never install in a sleeping room.
A. Outside Air Kit Instructions

**Parts Included in Kit:** 1 piece of 2 inch x 3 foot flex hose, 2 hose clamps, 1 collar assembly, 1 termination cap assembly, 1 trim ring, 12 screws.

**Tools Needed:** Phillips head screwdriver; wire cutters; hole saw or jig saw.

1. Figure 17.1 shows bottom of convection blower mount and pre-cut air vent opening for reference only. Air channel should be mounted with stove in upright position.
2. Align hooks in air channel with slots in convection blower mount and ash box, Figure 17.2. Push up and slide forward.
3. Secure air channel to appliance with 2 screws and secure the collar assembly to the air channel with 2 screws. Figure 17.3.

---

**CAUTION**

Never draw outside combustion air from:
- Wall, floor or ceiling cavity
- Enclosed space such as an attic or garage

1. Measure distance from floor to air vent opening in appliance and mark location on wall.
   Use saw to cut opening in wall. Cut a 2-1/2 to 3 inch (64-76mm) opening on inside wall and a 3 to 3-1/2 inch (76-89mm) opening on outside of house.
2. Use hose clamp to secure flex pipe to collar assembly.
3. Slide trim ring over flex pipe and run pipe through wall.
4. Attach hose to outside termination cap with second hose clamp.
5. Secure termination cap to outside surface.
6. Secure trim ring to interior wall.

---

**Figure 17.1**

**Figure 17.2**

**Figure 17.3**

**Figure 17.4**
B. Leg Leveling System

1. Thread Allen bolts through nuts until flush. Figure 18.1. The Allen bolts and nuts are included in the component pack inside the stove firebox.

2. Slide assembled nuts and bolts into slots on legs with the nuts on the bottom. Figure 18.2. Use a 5/32 in. (3.96mm) Allen wrench to adjust legs up and down to desired level. Figure 18.3

C. Top Vent Adapter Installation

3 to 3 inch Top Vent Adapter
3 to 6 inch Top Vent Offset Adapter

Installing the Top Vent Adapter

1. Put a layer of high temperature silicone on the 3 inch (76mm) rear exhaust outlet. Figure 18.4

2. Slide the top vent adapter onto the rear exhaust outlet and adjust the assembly to a vertical position. Figure 18.4

3. Drill 4 holes with #26 drill bit (provided) into the back of the appliance using the outer shield as a pattern (make sure the assembly is vertical). Figure 18.4

4. Install the 4 mounting screws.

5. Drill 2 holes with #26 drill bit through the rear exhaust outlet using the 2 holes already in the short horizontal pipe in the top vent adapter as a guide. Install the 4 screws. Figure 18.5.

6. Install the vent pipe into the top vent adapter (be sure to silicone all joints).

D. Rear Vent and Rear Vent to Top Vent Adapter Installation

1. Put a layer of high temperature silicone on the 3 inch (76mm) exhaust outlet. Figure 18.4

2. Slide the adapter onto the rear exhaust outlet and adjust the assembly to the appropriate position.

3. Install the vent pipe into the adapter (be sure to silicone all joints).
E. Optional Log Set Placement Instructions

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Logs are FRAGILE. Use extreme care when handling or cleaning logs.</td>
</tr>
</tbody>
</table>

4 PIECE LOG SET INSTALLATION

1. Open the hinged cast face and open the glass door assembly.
2. To position the logs, place the right rear log as shown in Figure 19.1. There is a notch in the bottom of the log for clearance for the thermocouple and thermocouple cover (ceramic protection tube).
3. Continue placing the last 3 logs around the firepot as show in Figures 19.2, 19.3 and 19.4. Be careful not to block the drop tube in the back of the firebox where pellets feed into the firepot.

NOTE:
Due to the abrasive nature of a pellet appliance fire, the logs are not covered under warranty. Any placement variation other than shown here can cause excessive heat and shall void the appliance warranty.

OPTIONAL TOP LOG

Place the log over the firepot. The charred area on the back of the log is turned toward the back, not the front. The log will be about 2-1/2 inches above the firepot when in place. It must rest on the 3 logs in a stable position to prevent it from falling into the firepot.
F. Thermostat Installation

1. A 12 volt AC thermostat is required to operate this pellet appliance. You may use the included wall mount thermostat or purchase an optional programmable thermostat or remote control. It is equipped with an adjustable heat anticipator. The current rating is .05 amps. The anticipator needs to be adjusted to the lowest setting available.

2. When mounting a thermostat on a wall, be sure to follow your thermostat installation instructions carefully.

   **NOTE:** Thermostat must be mounted level for accurate readings. The thermostat should be mounted on an inside wall and not in direct line with the appliance convection air.

   **NOTE:** If the thermostat is located too close to the appliance, you may need to set the temperature setting slightly higher to maintain the desired temperature in your home.

3. There is a 4 screw terminal block located on the back lower right corner of the stove directly above the power cord inlet. The center 2 screws are for the thermostat wires.
Operating Instructions

A. Fuel Size And Material

1. Wood Pellets

Fuel pellets are made from sawdust or wood by-products. If the source material is hardwood, they can have a higher mineral content, creating more ash. Fuels containing bark will also have higher ash content. Minerals and other noncombustible materials such as sand will turn into a hard, glass-like substance called a clinker when heated to the extreme temperatures our firepot reaches. This is what forms clinkers in the bottom of the firepot. Trees from different areas will vary in mineral content. That is why some fuels produce more clinkers than others. Pellets are manufactured in either 1/4 inch or 5/16 inch (6-8mm) diameter and should be no more than 1-1/2 inches (38mm) in length. Pellet lengths may even vary by lot from the same manufacturer which is why the feed rate may need to be adjusted occasionally. If you burn pellets longer than 1-1/2 inches (38mm) you may have an inconsistent fuel feed rate and/or missed ignitions.

Pellet fuel quality can greatly fluctuate. We recommend using premium grade fuel with ash content less than 1%. Even in some fuel labeled “premium” ash content can vary from bag to bag and possibly exceed 1%. High ash fuel, or lack of maintenance, can cause the firepot to fill up and thus create a potential for smoking, sooting and possible hopper fires.

Always burn dry fuel. Burning fuel with high moisture content takes heat from the fuel and tends to cool the appliance, robbing heat from your home. Damp pellet fuel can clog the feed system.

We recommend that you buy fuel in multi-ton lots whenever possible. Buying large quantities of fuel at once will greatly reduce the number of times the feed adjustments will need to be made. However, we do recommend trying various brands before purchasing multi-ton lots to ensure your satisfaction.

### WARNING

**Fire and Smoke Risk.**

- High ash fuels or lack of maintenance can cause firepot to overfill. Follow proper shutdown procedure if ash buildup exceeds half way point in firepot.
- Failure to do so could result in smoking, sooting and possible hopper fires.

2. Shelled Field Corn

Extensive factory and field testing has demonstrated shelled field corn to be an efficient and very economical fuel. We recommend the use of a 50-50 blend of corn and wood pellets. The only change in operation is that the feed rate may require a slight adjustment. The BTU output of the appliance varies slightly compared to pellets, depending on the quality of the corn used. In cases where it is acceptable for the appliance to run full time, 100% corn will work after the fire has been started using wood pellets.

B. General Operating Information

1. Thermostat Calls For Heat

The appliance is like most modern furnaces; when the thermostat calls for heat, your appliance will automatically light and deliver heat. When the room is up to temperature and the thermostat is satisfied, the red call light will go off and the appliance will shut down.

2. Heat Output Controls

This appliance is equipped with a heat output control switch that has three settings or burn rates; low, medium and high. The appliance will turn on and off as the thermostat demands. When the thermostat calls for heat, the appliance will start up at the burn rate for which it is set. If the appliance is set at one of the lower settings, it will run quieter but take longer to heat up an area than if it were set at a higher burn rate. Regardless of the burn rate, when the area is warm enough to satisfy the thermostat, the appliance will shut off.

### WARNING

**Fire and Smoke Risk.**

- High ash fuels or lack of maintenance can cause firepot to overfill. Follow proper shutdown procedure if ash buildup exceeds half way point in firepot.
- Failure to do so could result in smoking, sooting and possible hopper fires.

**Fire Hazard.**

Keep combustible materials, gasoline and other flammable vapors and liquids clear of appliance.

- Do NOT store flammable materials in the appliance’s vicinity.
- Do NOT use gasoline, lantern fuel, kerosene, charcoal lighter fluid or similar liquids to start or “freshen up” a fire in this heater.
- Keep all such liquids well away from the heater while it is in use.
- Combustible materials may ignite.
C. Before Your First Fire
1. First, make sure your appliance has been properly installed and that all safety requirements have been met. Pay particular attention to the fire protection, venting and thermostat installation instructions.
2. Double check that the ash pan and firebox are empty!
3. Check the position of the thermocouple, located above the firepot, and make sure that it protrudes approximately 3/4 inch (19mm) into the firepot. IMPORTANT DETAIL: The tip of the thermocouple must be in contact with the inside end of the thermocouple cover.
4. Close the front door.

D. Starting Your First Fire
1. A thermostat is required for proper operation of this appliance, except for corn. At this time, fill the hopper with pellets, set the thermostat to its lowest setting. Plug the power cord into nearby outlet.
2. The exhaust blower will stay on for approximately 18 minutes even though the thermostat is not calling for heat. This is normal.
3. Locate the heat output control switch mounted on the back of the appliance in the upper right corner. See Figure 21.1 on page 21. Turn it to the “high” setting by pushing the top of the control switch in and then adjust the thermostat to its highest setting. Open the right side panel and the red call light located behind the control box will be on. See Figure 22.1. This indicates the thermostat is calling for heat.
4. The fuel feed system and the igniter should now be on.
5. For your first fire it will be necessary to press the reset button once approximately 2 minutes after start up and again in 5 minutes. This will fill the feed system and allow the appliance to begin dropping pellets. The appliance will continue to run as long as the thermostat is calling for heat.
6. Once the appliance has ignited, let it burn for approximately 15 minutes, then set the thermostat to the desired room temperature. Adjust the heat output control switch to the desired setting.

E. Fire Characteristics
A properly adjusted fire with the heat output control switch set on “high” has a short active flame pattern that extends out of the firepot approximately 4 inches (102mm). If the fire has tall flames with black tails and seems somewhat lazy, the feed rate will need to be reduced. This is done by sliding the fuel adjustment control rod down, which will reduce the feed. If the fire is not 4 inches (102mm) tall, slide the fuel adjustment control rod up to increase the feed. A medium and low setting will give a shorter flame. The flame will rise and fall somewhat. This is normal.

F. Feed Rate Adjustment Instructions
The feed adjustment control rod is factory set, and should be adequate for most fuels. However, if the flame height is too high or too low, you will need to adjust the feed rate. Wait until the appliance has been burning for 15 minutes before making your adjustments and allow 15 minutes for feed adjustment to take effect.
1. Loosen the set screw 1/4 to 1/2 turn during set-up of appliance. This will allow movement of the feed adjustment control rod. Do not re-tighten set screw.
2. Loosen the wing nut
3. Adjust the feed adjustment control rod upward towards the “+” symbol to increase the feed rate and flame height or down towards the “-” symbol, to decrease the feed rate and flame height.
4. Re-tighten the wing nut.
G Ignition Cycles

1. During each ignition cycle, it is normal to see some smoke in the firebox. The smoke will stop once the fire starts.

2. The convection blower will automatically turn on after your appliance has reached the set temperature on the “high” setting. This blower transfers heat from your appliance into the room, and will continue to run after the thermostat has stopped calling for heat until the appliance has cooled down.

3. Occasionally the appliance may run out of fuel and shut itself down. When this happens, the red call light will be on. (See Figure 22.1, page 22). To restart it, fill the hopper and press the reset button. (See Figure 21.1, page 21). When you press the reset button the red call light will go out. Release the button and the light will come back on. You should see a fire shortly. If not, follow the instructions on page 22, of “Starting Your First Fire”.

CAUTION

Odors and vapors released during initial operation.
- Curing of high temperature paint.
- Open windows for air circulation.
Odors may be irritating to sensitive individuals.

H. Frequently Asked Questions

<table>
<thead>
<tr>
<th>ISSUES</th>
<th>SOLUTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Metallic noise.</td>
<td>1. Noise is caused by metal expanding and contracting as it heats up and cools down, similar to the sound produced by a furnace or heating duct. This noise does not affect the operation or longevity of your appliance.</td>
</tr>
<tr>
<td>2. Ash buildup on glass.</td>
<td>2. This is normal. Clean the glass.</td>
</tr>
<tr>
<td>3. Glass has turned dirty.</td>
<td>3. Excessive build up of ash. The lower burn settings will produce more ash, the higher burn settings produce less. The more it burns on low the more frequent cleaning of the glass is required.</td>
</tr>
<tr>
<td>4. Fire has tall flames with black tails and is lazy.</td>
<td>4. The feed rate needs to be reduced or the firepot needs cleaning. Heat exchanger or exhaust blower needs cleaning.</td>
</tr>
<tr>
<td>5. Smokey start-up or puffs of smoke from the airwash.</td>
<td>5. Either the firepot is dirty or there is too much fuel at start-up and not enough air. Close down feed rate 1/4 inch at a time until this no longer happens.</td>
</tr>
<tr>
<td>6. Large flame at start-up.</td>
<td>6. This is normal. Flame will settle down once the fire is established.</td>
</tr>
</tbody>
</table>
With proper installation, operation, and maintenance your appliance will provide years of trouble-free service. If you do experience a problem, this troubleshooting guide will assist a qualified service person in the diagnosis of a problem and the corrective action to be taken. This troubleshooting guide can only be used by a qualified service technician.

</tbody>
</table>
Maintaining & Servicing Your Appliance

A. Proper Shutdown Procedure

**CAUTION**

**Shock and Smoke Hazard**
- Turn down thermostat, let appliance completely cool and exhaust blower must be off. Now you can unplug appliance before servicing.
- Smoke spillage into room can occur if appliance is not cool before unplugging.
- Risk of shock if appliance not unplugged before servicing appliance.

**WARNING**

**Fire Risk**
- NEVER pull firepot cleaning rod or cleaning slide plates out when appliance is operating.
- The cleaning slide plates must be fully CLOSED when appliance is operating.
- Hot pellets may fall into ashpan and start a fire or mis-starts due to lack of vacuum.

B. General Maintenance

1. **Types of Fuel**
   Depending on the type of fuel you are burning will dictate how often you have to clean your firepot. If the fuel you are burning has a high dirt or ash content or you are burning shelled field corn, it may be necessary to clean the firepot more than once a day. Dirty fuel will cause clinkers to form in the firepot. A clinker is formed when dirt, ash or a non-burnable substance is heated to 2000°F (1093°C) and becomes glass-like. See "C" in this section for more details on fuels with high ash content.

2. **Cleaning Firepot with Cleaning Rod & Firepot Scraper**
   - **Frequency:** Daily or more often as needed
   - **By:** Homeowner
   - **Task:**
     a. The appliance must be in complete shutdown and cool and the exhaust blower off.
     b. Pull firepot cleaning rod OUT a couple of times to help shake debris loose. If rod is hard to pull, it may be necessary to use your firepot scraper to chip away material that has built up on the bottom plate of the firepot and to push out any clinkers. Larger clinkers may have to be removed from the top of the firepot. Corn clinkers can be especially difficult to break up.
     c. The firepot floor plate must be fully closed when finished.

3. **Cleaning Ash Pan**
   - **Frequency:** As needed
   - **By:** Homeowner
   - **Task:**
     Locate the ash pan underneath the firepot. Open the bottom ash door and slide the ash pan straight out. Empty into a noncombustible container and re-install ash pan. See Disposal of Ashes on page 28.

4. **Ash Removal from Firebox**
   - **Frequency:** Weekly or as needed
   - **By:** Homeowner
   - **Task:**
     a. There must not be any hot ashes in the firebox during cleaning so allow the appliance to completely cool. The firebox ash should be removed every time the firepot is cleaned. Frequent cleaning of the ash in the firebox will help slow down the build-up of ash in the exhaust blower and vent system.
     b. Plug in your appliance, if unplugged, and turn the thermostat on and immediately shut it off to start the exhaust blower on its cycle time. It will pull fly ash out the exhaust instead of into the room.
     c. Open cast hinged face. Directly underneath the firebox door and to the left and right of the firepot are 2 cleaning slide plates with finger holes. Pull both slide plates out and then open the glass door. Sweep the remaining ash from the firebox into the 2 open holes. A paint brush works well for this. Close slide plates.
     d. This ash is deposited in the same ash pan as the firepot debris. The ash pan should be emptied every time you clean the firebox. Remember to place the ash and debris into a metal or noncombustible container.
     e. The 2 cleaning slide plates must be fully closed when cleaning is complete. See Disposal of Ashes on page 28.
6. **Disposal of Ashes**

- **Frequency:** As needed  
- **By:** Homeowner  
- **Task:**

Ashes should be placed in a metal container with a tight-fitting lid. The closed container of ashes should be placed on a noncombustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have been thoroughly cooled.

---

**WARNING**

Disposal of Ashes  
- Ashes should be placed in metal container with tight fitting lid.  
- Ashes should be retained in closed container until all cinders have thoroughly cooled.

---

7. **Cleaning Heat Exchanger Chambers**

- **Frequency:** Weekly or as needed  
- **By:** Homeowner  
- **Task:**

The amount of ash buildup in the firepot will be a good guide to determine how often you should clean the heat exchangers.

a. Allow the appliance to completely cool down before pulling the cleaning rods. Turn the thermostat on and then immediately off to start the exhaust blower on its cycle time. It will pull fly ash out the exhaust instead of into the room. Open the cast hinged face to access the 2 cleaning rods. **See Figure 28.1.**

b. Locate the 2 rods directly underneath the heat exchanger tubes. Rods are bent at a 90° angle for easy handling.

3. To clean, pull the rods straight out until it stops, approximately 5-1/2 inches (140mm). Slide the rods OUT and IN a couple of times.

---

**WARNING**

Heat exchanger cleaning rods may be warm to the touch. For safety purposes wear gloves.

Do not pull heat exchanger cleaning rods while appliance is operating.

---

8. **Cleaning Beneath Heat Exchanger**

- **Frequency:** Monthly or after burning 1 ton of fuel  
- **By:** Homeowner  
- **Task:**

A more thorough cleaning is needed to remove the excess ash that is left behind from the use of the cleaning rods for the heat exchanger tubes. The ash will be resting on the back of the baffle. This will require removing the cast baffle. Please refer to page 32 for a detailed explanation of removing the baffle.

**NOTE:** There are heavy duty vacuum cleaners specifically designed for solid fuel appliance cleaning.

---

9. **Cleaning the Glass**

- **Frequency:** As needed  
- **By:** Homeowner  
- **Task:**

a. Appliance must be completely cool before cleaning glass.

b. Use a damp paper towel or any non-abrasive glass cleaner. Wipe off with dry towel.

---

**CAUTION**

Handle glass assembly with care.

**When cleaning glass:**

- Avoid strikng, scratching or slamming glass.  
- Do NOT clean glass when hot.

- Do NOT use abrasive cleaners.  
- Use a hard water deposit glass cleaner on white film.  
- Refer to maintenance instructions.

---

**WARNING**

Handle glass with care.

- Inspect the gasket to ensure it is undamaged.  
- Do NOT strike, slam or scratch glass.  
- Do NOT operate appliance with glass assembly removed.

- Do NOT operate with glass cracked, broken or scratched.
10. **Cleaning the Exhaust Path**
   - **Frequency:** As needed
   - **By:** Homeowner
   - **Task:**
     a. Appliance must be completely cool.
     b. Open cast hinge face. Remove right brick and thoroughly vacuum the area and continue throughout the rest of the firebox.
     c. Replace right brick and close cast hinge face.

11. **Cleaning the Hopper**
    - **Frequency:** Monthly or after burning 1 ton of fuel
    - **By:** Homeowner
    - **Task:**
      After burning approximately 1 ton of fuel you will need to clean the hopper to prevent sawdust build-up. A combination of sawdust and pellets on the auger reduces the amount of fuel supply to the firepot. This can result in nuisance shutdowns and mis-starts.
    1. The appliance must be in complete shutdown. Allow the appliance to completely cool down.
    2. Empty the hopper of any remaining pellets.
    3. Vacuum the hopper and feed tube.

12. **Cleaning Convection Blower - Requires No Lubrication**
    - **Frequency:** Yearly or as needed
    - **By:** Qualified Service Technician / Homeowner
    - **Task:**
      The convection blower is located at the bottom rear of the stove. It is house inside the screen box. See page 31 for detailed instructions on removing the blower.
      The blower has two impellers, one on each side of the motor. They should be cleaned at least once each year or more often as needed.

13. **Cleaning Exhaust Blower - Requires No Lubrication**
    - **Frequency:** Yearly or as needed
    - **By:** Quality Service Technician
    - **Task:** Contact your local dealer.

14. **Door Latch Inspection**
    - **Frequency:** Periodically
    - **By:** Homeowner
    - **Task:**
      The door latch is non-adjustable but the gasketing between the glass and firebox should be inspected periodically to make sure there is a good seal.

15. **Soot and Fly Ash: Formation & Need for Removal in Exhaust Venting System**
    - **Frequency:** Yearly or as needed
    - **By:** Qualified Service Technician/Homeowner
    - **Task:**
      The products of combustion will contain small particles of fly ash. The fly ash will collect in the exhaust venting system and restrict the flow of the flue gases. At start-up if there is incomplete combustion, or if there is a shutdown or incorrect operation of the appliance, it will lead to some soot formation. This will collect in the exhaust venting system.
      The venting system may need to be cleaned at least once a year, or more often, depending upon the quality of your fuel or if there is a lot of horizontal pipe sections. Ash will build up more quickly in the horizontal sections.

16. **Cleaning the Top Vent Adapter**
    a. The appliance must be in complete shutdown and the exhaust blower should be off. Allow the appliance to completely cool down.
    b. Open the clean out cover. See Figure 29.1.
    c. Sweep out any ash build-up.

    NOTE: There are heavy duty vacuum cleaners specifically designed for solid fuel appliance cleaning.
C. High Ash Fuel Content Maintenance

- **Frequency:** As needed
- **By:** Homeowner
- **Task:**

Poor quality pellet fuel, or lack of maintenance, can create conditions that make the firepot fill quickly with ashes and clinkers. This condition makes the appliance susceptible to overfilling the firepot with pellets which may result in smoking, sooting and possible hopper fires. **Figure 30.1** shows an example where the firepot overfills, pellets back up into the feed tube and ash has accumulated in the firebox. **Figure 30.2** illustrates an inefficient and non-economical method of burning fuel caused by poor quality pellet fuel. **Figure 30.3** shows the correct flame size when good quality, premium pellet fuel is burned.

If the ash buildup exceeds the half way point in the firepot **IMMEDIATE ATTENTION AND CLEANING IS REQUIRED.** Follow the proper shutdown procedure below and the detailed instructions found in this section for each step listed below.

- Pull the heat exchanger cleaning rods.  
  Section 10.7
- Empty the firepot.  
  Section 10.2
- Clean the firebox.  
  Section 10.4
- Empty the ash drawer.  
  Section 10.3
- Dispose of the ashes.  
  Section 10.6
- Restart the appliance with premium grade fuel.

**Proper Shutdown Procedure**

- **CAUTION**

  **Shock and Smoke Hazard**
  - Turn down thermostat, let appliance completely cool and exhaust blower must be off. Now you can unplug appliance before servicing.
  - Smoke spillage into room can occur if appliance is not cool before unplugging.
  - Risk of shock if appliance not unplugged before servicing appliance.
D. Blower Replacement

1. Convection Blower Replacement
   a. Turn down thermostat, let appliance completely cool and then unplug appliance before servicing.
   b. The convection blower is located at the bottom rear of the appliance and is housed inside a screen box. Remove the 2 screws facing forward in the center of the blower chamber at the very back of the appliance.
   c. If an outside air kit is installed on the appliance, these screws attach the intake air channel piece of the outside air kit to the appliance. Remove the 2 screws and pull backwards on the channel and it will slide down and away from the appliance. The air channel, collar and outside air hose will be removed as one piece.
   d. Remove the 4 screws that attach the blower housing to the appliance, 2 on each side. Loosen all 4 screws, but do not remove them. Lift the blower housing up slightly and slide towards you. Figure 31.1.
   e. Remove the left side panel by loosening 2 screws (do not remove) and pull side panel away. Unplug the 2 black blower wires by disconnecting the spade connectors.
   f. To remove blower from the housing, remove 2 screws in the front of the housing and very carefully bend the 2 housing sides out and bend the back of the housing away from the blower. This allows for room to access the back 2 screws and nuts (4 total) that is securing the blower to the housing.
   g. Remove blower and replace with new blower.
   e. Re-install in reverse order.

2. Exhaust Blower Replacement
   NOTE: The convection blower must be removed before the exhaust blower can be removed.
   a. Turn down thermostat, let appliance completely cool and then unplug appliance before servicing.
   b. Remove both side curtains by loosening 2 screws (do not remove) and pull side panels away.
   c. Remove 7 screws from the back screen and pivot the top of the screen toward you leaving the bottom attached to stove. Figure 31.2.
   d. Remove 2 screws to remove the thermostat block and disconnect the 2 yellow wires.
   e. Remove the 2 screws from the power inlet and rotate it through the hole and out of the screen, leaving the wires attached.
   f. Disconnect the vacuum hose and both wires (orange and red) from the vacuum switch attached to the rear screen.
   g. Remove both wires from exhaust blower (blue and double white).
   h. Remove 6 screws using a flathead screwdriver or a 1/4" nutdriver. Retain screws for use on replacement blower. Figure 31.3.
   i. Remove exhaust blower and gasket.
   j. Install new gasket and blower. Discard blower housing if not needed.
   k. Re-install in reverse order.

---

Figure 31.1
Figure 31.2
Figure 31.3
Figure 31.4
E. Igniter Replacement

- Turn down thermostat, let the appliance completely cool and then unplug appliance before servicing.
- Open the ash door and remove the ash pan. Remove the left side panel by loosening 2 screws (do not remove) and pull side panel away.
- The wire leads to the igniter are connected to the wire harness (black wires) with 1/4 inch male / female spade connectors. Disconnect the spade connections. Use a Phillips Head screwdriver to remove set screw and slide igniter out.
- Install new igniter into the chamber and replace the screw.
- Re-connect the wires to the 2 leads with the spade connectors. Double check that the igniter wires are clear of any movement, i.e. ash pan, firepot cleaning rod, cleaning slide plates, etc.
- Re-install the ash pan, close the ash removal door. Re-install the side panel and re-connect the power.

F. Baffle Removal

**NOTE:** There is a latch on the appliance to keep the top baffle from coming out during shipment or when the heat exchanger scraper rods are pulled.

- Allow appliance to cool completely.
- Open doors and locate the latch. It is located between the front edge of the top baffle and the inside of the firebox centered from side to side. The latch pivots up and down.
- Push the latch up with your finger while sliding the top baffle forward and down. Figure 32.2.
- To re-install the top baffle, align the hooks on the baffle with the slots in the baffle hangers, push up and slide back. Figure 32.3.
- Make sure the latch drops back into position, bypassing the first notch and catching the front edge of the top baffle with the second small notch.
G. Glass Replacement

**WARNING**

- Glass is 5mm thick high temperature heat-resistant ceramic glass.
- DO NOT REPLACE with any other material.
- Alternate material may shatter and cause injury

a. Open the face and remove door from the appliance by lifting door off of hinge pin and lay on a flat surface face down.

b. Using a screwdriver, tap the bottom of the rope retainer rod to push it up out of the hole. The top end of the rod will slide up. Swing the rod toward you from the bottom and remove the rod. Repeat for other side.

c. Remove old glass and replace with new glass.

d. Slide the retainer rod into the top hole first, and then line up the bottom crimped end with the hole in the door. The crimped end must be parallel with the glass in order to insert it into place. **Figure 33.1.**

![Figure 33.1]
A. Component Function

1. Control Box
   a. The control box is located on the lower left side of the appliance, behind the left side panel and above the vacuum switch.
   b. There is a light located inside of the control box. The internal light will turn green when the appliance has reached a temperature of 175°F (79°C) in the firepot and will turn red when it reaches 600°F (315°C).
   c. There is also an internal blue light located in the upper left corner of the control box. When you plug in the appliance the blue light will automatically start blinking 6 times in a row for 60 seconds and then will stop.

   NOTE:
   Do NOT open the control box. This will void the warranty. Follow proper shutdown procedures first if you need to plug in or remove the control box.

2. Convection Blower
   The convection blower is mounted at the bottom rear of the appliance. There are 2 impellers, one on each side of the motor. The convection blower pushes heated air through the heat exchange system into the room.

3. Exhaust Blower
   The exhaust blower is located on the right side of the appliance. The exhaust blower is designed to pull the exhaust from the appliance and push it out through the venting system.

4. Feed System
   The feed system is located on the right side of the appliance and can be removed as an entire assembly. The assembly includes the feed motor, mounting bracket, bearing and feed spring (auger). The hollow feed spring (auger) pulls pellets up the feed tube from the hopper area and drops them down the feed chute into the firepot.

5. Firepot
   The firepot is made of high quality ductile iron and has a cleaning pull-out rod. The floor of the firepot opens for cleaning when you pull out the rod. Be sure that the floor returns to a completely closed position or your appliance will not operate properly.

6. Fuse
   The fuse is located on the front of the junction box on the right side of the appliance. The fuse will blow should a short occur and shut off power to the appliance.

7. Heat Exchangers
   The heat exchangers transfer hot air from the exhaust system into convecton air. Remove the stainless steel top baffle to access the heat exchangers. There are 2 clean out rods located under the heat exchangers.

8. Heat Output Switch
   The heat output switch is located on the upper right rear corner. The function of the heat output switch is to regulate the burn rates; low, medium and high settings.

9. Igniter
   The igniter is mounted on the base of the firepot. Combustion air travels over the red hot igniter creating super heated air that ignites the pellets.

10. Junction Box And Wiring Harness
    The junction box is located on the right side of the appliance, behind the right side panel. The junction box and wiring harness are replaced as one component.

11. Power Supply
    The power outlet is located on the lower right rear corner. Check the wall receptacle for 120 volt, 60 Hz (standard current). Make sure the outlet is grounded and has the correct polarity. A good surge protector is recommended.

12. Red Call Light
    The red call light is on the front of the junction box, behind the control box. The function of the red call light is to indicate that the thermostat is calling for heat.

13. Reset Button
    The reset button is located on the back of the appliance on the upper right corner of the side panel under the heat output control switch. The function of the button is to momentarily open the thermostat circuit, which restarts the system.

14. Thermocouple
    The thermocouple is located on top of the firepot inside the thermocouple cover (ceramic protection tube). The thermocouple sends a millivolt signal to the control box indicating the preset temperatures of the green and red lights have been obtained.

15. Thermostat
    The appliance is designed to run on a 12 volt AC thermostat. The heat anticipator should be set on the lowest setting available.
16. **Snap Disc #1 (Convection Blower) 125°F**
Snap disc #1 is located on the right side of the appliance on the top of the heat exchanger box. There are 2 purple wires connected to it. This snap disc turns the convection blower on and off as needed. Power is always present at snap disc #1.

17. **Snap Disc #2 (Thermostat Override) 175°F**
Snap disc #2 is also located on the right side of the appliance below snap disc #1 and has a red reset button. There are 2 orange wires connected to it. This snap disc will turn off the feed system, which will turn off the appliance if an overfire condition should occur or if the convection blower should fail to operate.

18. **Snap Disc #3 (Back Burn Protector) 250°F**
Snap disc #3 is mounted on the back of the auger tube in the center of the appliance and has a red reset button. To access it remove the right side panel. If the fire tries to burn back into the feed system or push exhaust up the feed tube, this snap disc will shut the entire system off. This disc must be manually reset.

19. **Vacuum Switch**
The vacuum switch is located on the right side of the appliance behind right side panel. This switch turns the feed system on when vacuum is present in the firebox. The vacuum switch is a safety device to shut off the feed motor if the exhaust or the heat exchanger system is dirty or plugged or if the firebox door is open.

20. **Wiring Harness**
See Figure 35.1 below.

F. Warranty Policy

LIMITED LIFETIME WARRANTY
The Hearth & Home Technologies limited Lifetime Warranty guarantees that the following components will work as designed for the lifetime of the stove or Hearth & Home Technologies will repair or replace them. These items include but are not limited to steel and cast iron components, all gas burners, gas logs, combustion chambers, heat exchanger systems, stainless steel firebox components, plating, doors, glass damaged by thermal breakage, steel baffle supports, steel and ceramic baffles and manifold tubes. Labor is for the first five years.

THREE YEAR WARRANTY
Our EZ Clean firepots are covered under Hearth & Home Technologies three-year warranty program. Labor is for 3 years.

TWO YEAR WARRANTY
All electrical components such as but not limited to blowers, wiring, vacuum switches, speed controls, control boxes, thermodisc switches, igniters, pilot assembly, gas valves, thermostats and remotes are covered under Hearth & Home Technologies two-year warranty program. Effective April, 2005 igniters are also covered under the two year warranty. Labor is for 2 years.

ONE YEAR WARRANTY
Porcelain finishes are warranted against manufacturer defects for one year. Labor to repair or replace these parts is covered for one year, reimbursed per our warranty service fee schedule.

CONDITIONS
This warranty is non-transferable and is made to the original retail purchaser only provided that the purchase was made through an authorized dealer of Hearth & Home Technologies. It must be installed and operated at all times in accordance with the Installation and Operating Instructions furnished with this product, as well as any applicable local and national codes. Any alteration, willful abuse, accident, or misuse of the product shall nullify this warranty.

Labor to repair or replace items covered under the limited Lifetime Warranty will be covered for the first five years per our warranty service fee reimbursement schedule. Parts covered under the limited Lifetime Warranty will be covered for the lifetime of the appliance up to a maximum of ten (10) years after Hearth & Home Technologies discontinues the model and two (2) years for optional accessories. Adjustments, regular maintenance, cleaning and temporary repairs do not qualify for a service call fee and will not be covered. The replacement of consumer replaceable items and installation of upgraded component parts do not qualify for a service call fee, and will not be covered.

This limited Lifetime Warranty does not extend to or include surface finish on the appliance, door gasketing, glass gasketing, glass, firebrick, pellet logs, kaowool or other ceramic insulating materials. It does not cover installation or operational-related problems such as overfiring, use of corrosive driftwood, downdrafts or spillage caused by environmental conditions, nearby trees, buildings, hilltops, mountains, inadequate venting or ventilation, excessive offsets, or negative air pressures caused by mechanical systems such as furnaces, fans, clothes dryers, etc.

Any installation construction transportation or other related costs or expenses arising from defective part(s) repair, replacement, etc., will not be covered by this warranty, nor will Hearth & Home Technologies assume responsibility for them. Further, Hearth & Home Technologies will not be responsible for any incidental, indirect, or consequential damages, except as results in damage to the interior or exterior of the building in which this appliance is installed. This limited Lifetime Warranty does not apply to the venting components, hearth components or other accessories used in conjunction with the installation of this product not manufactured by Hearth & Home Technologies.

This warranty is void if the stove has been overfired or operated in atmospheres contaminated by chlorine, fluorine, or other damaging chemicals, the stove is subjected to prolonged periods of dampness or condensation, or there is any damage to the stove or other components due to water or weather damage which is the result of, but not limited to, improper chimney or venting installation. Hearth & Home Technologies may, at its discretion, fully discharge all obligations with respect to this warranty by either repairing or replacing the unit, or refunding the wholesale price of the defective part(s).

This limited Lifetime Warranty is effective on all appliances sold after May 1, 2002 and supersedes any and all warranties currently in existence.

Policy 250-8620  Rev H
CAUTION
Do NOT discard this manual.
• Important operating and maintenance instructions included.
• Read, understand and follow these instructions for safe installation and operation.
• Leave this manual with party responsible for use and operation.
