To make the right brick choice, visit our Selection Centres

At PGH™ Selection Centres, we actually are different. When you visit our Selection Centres, you will be assisted by one of our Colour Consultants to design the look of your new home with our easy Colour Selection tools.

PGH™ have specially designed selection tools all created to make the selection of your exterior scheme easier. Select the Colour Collection you prefer from our Colour Wall. Try different colour combinations with Colour Touch to see how these combinations work for your new home.

There is nothing like seeing colours and textures in real life, so step outside and stroll through the External Display Area where you’ll find displays of bricks, roof tiles and pavers. When you’ve decided on your brick, take away your free samples to show your family and friends.

Why choose bricks?

- sustainable
  - natural, recyclable and energy efficient
- temperature control
  - with proper design, your home will be warm in winter, cool in summer
- low maintenance
  - enduring colour so no need to paint
- design flexibility
  - whatever the design or colour trend, there’s a brick to suit your individual needs
- acoustic
  - reduces noise and lets you enjoy a quiet haven
- strong and safe
  - durable, non-combustible, termite resistant, won’t rot or decay
- cost effective
  - less upfront costs and virtually no ongoing costs

As a CSR business, PGH Bricks & Pavers™ is one of Australia’s largest and most innovative brick makers. We kiln fire a blend of clay, sand and shale to produce bricks that are as beautiful and enduring as the rich earth they’re formed from.

With their lasting colour and superb texture, PGH™ bricks will provide a warm welcome home time and time again.
Combine all the advantages of brick with our friendly advice and expertise... and you know you’ve made the right choice.
Our Colour Consultants work closely with you to build a picture of your home, providing you with a complete external solution.
The PGH™ Colour Wheel

Helping you choose the right brick for your home

At PGH™ we understand the importance of your brick choice. We know that when our customers choose bricks, it is predominantly on colour. But, more importantly, we understand that this choice cannot be made in isolation.

Bricks make up 60% of the ‘look’ of the external façade of your home, with roofing tiles 30% and gutter and fascia 10%. However, in terms of the complete picture of your home, it is also important to take into consideration the windows you intend to use and what your garage door will look like, as these can alter the whole look you are trying to achieve. When you choose to build with PGH™, our Consultants work closely with you to build a picture of your home, providing you with a complete external solution.

Bricks are the starting point. To make this choice a little easier for you, we have placed all our bricks into 6 contemporary Colour Collections. In consultation with a wide range of design and colour experts, we have worked our way through thousands of colours to come up with these Colour Collections. They provide you with the perfect place to start.

It’s simple. Take a look at the Colour Wheel and select the Colour Collection that most appeals to you. Do you like the more neutral and muted colours of New Naturals or Rich Creams? Perhaps you prefer the stronger colours of Dramatic Reds or Golden Tans? Maybe the current trends of Silver Greys or Rustic Browns are more to your liking?

Turn to the pages of your preferred Colour Collection in this brochure to find all the beautiful PGH™ bricks currently available.
Chatswood

A timeless style brick which features the subtle tones of cream and golden yellow. The thrown texture gives this brick a natural and irregular pattern.
A timeless favourite that evokes nostalgic images of days gone by. Warm and inviting, Rustic Browns are the perfect choice to create a restful home environment.
Aluminium

Blue Steel Flash

A versatile collection that gives new meaning to sophistication. Choose Silver Greys for a home of innovation and distinction that is dignified, deliberate, powerful and disciplined.
The glorious colour of sunshine, sunflowers, spices, wheat fields and autumn leaves. Infused with natural warmth, there’s nothing more welcoming than hues of gold, bronze and ginger, burnished copper, yellow and tawny beige.

Biscuit

Fill your world with sunshine. Golden Tans infuse your home with natural warmth and create welcoming and joyful surroundings.
Inspired by the fresh, subtle shades and pure colours of nature — lush rainforests, ancient riverbeds and distant mountains. New Naturals create a home in harmony with the world around you.

Neutral brick colours with strong environmental overtones. Choose New Naturals to build a home in harmony with the world around you.
The passionate colours of the outback, fire, flame, and the setting sun. Reds will warm your soul. Deep and exotic, energetic and confident, choose reds to create a dramatic welcoming home.

There's nothing like reds to warm your soul. Deep and exotic, energetic and confident. Choose reds to create a dramatic welcoming home.
There’s nothing like reds to warm your soul. Deep and exotic, energetic and confident, choose reds to create a dramatic welcoming home.

Finishes

As well as the colour of the bricks you choose, it is also important to consider the finish you want for your home. It’s the finish that will enhance the architectural details and design elements, giving your home that eye catching quality. When looking at finishes there are two key elements to consider – Texture and Mortar.

Texture

Weathered
Crafted to look softly aged over time. Their distressed surface texture is reminiscent of naturally weathered sandstone.

Chiseled
Heavily striated that results in a rugged antique finish. With their carefully crafted face and square edges they have an incomparable surface beauty.

Matte
A coloured pigment is applied to the surface. These are a popular choice without the ongoing maintenance and expense of render. They do require care when they are laid.

Fritted
Produced when sand or minerals melt into the brick’s surface. They owe their distinctive colour and grain to the addition of blue and black mineral frit.
The traditional role of mortar is to bind bricks together. Today, mortar is a design tool that can accentuate exterior colour and form. Off white mortar, for example, will add contrast and highlight the shape of each brick, while buff mortar tones in with lighter bricks. Be mindful that mortar colours will also vary depending on local sand colours. For example, off white in Sydney would be different to off white in Coffs Harbour.

Colour matched mortar is also available, however you will need to check with your builder if it is an option.

Once you've decided on the colour of the mortar, you should also consider the type of mortar joint to use, as each type has its own unique character.

Round Ironed Mortar Joints
These enhance the effect of the brickwork by emphasising the mechanical regularity and repetition. To be used in Exposure Grade conditions and they are best suited to textures like smoothface, rolled and wirecut.

Flush Mortar Joint
When formed consistently, a Flush Mortar Joint makes the mortar the feature. Best suited to textures like smoothface, matte and rolled.

Raked Mortar Joints
Raked Mortar Joints create an ever-changing shadow line for contrast and interest. Best suited to textures like sandstocks, smoothface and rolled. These joints are not to be used on matte textured bricks.

Smooth
Crop, square edges and the consistent texture that their name suggests. Premium quality and superb aesthetics that are perfect for designs where detail is important.

Wirecut
Straight edges and a slightly rougher texture on their face, which is great if you are looking for a chromatic brick, without the conventional smoothness.

Thrown
Cast in sawdust-lined moulds that produce a unique, individual texture. This results in an unrivalled ‘one-of-a-kind’ character that adds a distinct dimension to any home, whether ultra modern or traditional.

Tumbled
Round, uneven edges and a ‘hand-made’ look. These gently tumbled bricks complement both modern and traditional designs.

Rolled
Treated with a patterned cylinder prior to firing, which produces a variety of textures that are either rustic or grainy.

Glaze
A premium finish makes these bricks something special. Their sheen is warm with a variation of intensity of colour across each face.
Sustainability

When it comes to energy efficiency and the environment, PGH™ bricks offer a lifetime of benefits.

**Bricks are an essential part of energy efficient design**

Bricks build in thermal mass. This mass is a key part of passive design, a proven method of keeping your home at a comfortable temperature all year round and reducing the need for heating and cooling devices. Thus, lowering electricity loads and your costs.

The Australian Greenhouse Office says, “Thermal mass acts as a ‘thermal battery’. During summer thermal mass absorbs heat, keeping the house comfortable. In winter the same thermal mass can store the heat from the sun or heaters to release it at night, helping the home stay warm.” (www.greenhouse.gov.au/yourhome/technical/fs17.htm)

**Principles of passive solar design**

- **WINTER**
  - Insulated ceiling
  - Low-e window: glass from high-e window: sun
  - North-facing, slab-scrapped warmed by solar radiation
  - Edge insulation in extreme situations

- **SUMMER**
  - Insulated ceiling
  - Reflective foil inside of foil space
  - Masonry walls and concrete flow absorb heat from internal air
  - Edge insulation in extreme situations
  - slab-scrapped opaque soil, deep-earth temperature

**Bricks are energy efficient in manufacture and application**

Using the measurement known as Embodied Energy (the energy consumed in the manufacture of various building materials) the CSIRO has concluded that clay bricks have less Embodied Energy than aluminium, steel, glass, or timber.

More importantly, over the lifetime of a home, the energy consumed in the manufacture of the materials accounts for only 5%. The other 95% is the ongoing running of the home, of which a significant proportion is for heating and cooling. The less of this required, the less direct impact there is on the environment.

**Bricks are energy efficient in application**

Brickwork can be very energy efficient, but designing a house to be cool in summer and warm in winter must take into account more than just the walling material. There are four factors as follows:

- **Orientation:**
  - Placement of the house in relation to the sun.

- **Insulation:**
  - A wall’s ability to isolate temperature.

- **Ventilation:**
  - Air flow through the house.

- **Mass:**
  - Heavyweight wall materials slow the passage of heat through a wall, a process called ‘thermal lag’. The easiest way to get this heavy mass into walls is brickwork. The heavier the brick, the higher its thermal value.

It is important to tailor the passive design features to each climate. For more information on Bricks & Sustainability, go to www.thinkbrick.com.au

When it comes to energy efficiency and the environment, PGH™ bricks offer a lifetime of benefits.
Colour variation
PGH Bricks are made from natural clays, fired at extreme temperatures to create product of enduring colour and character. As a result of natural variation in clays and the firing process, the texture, composition, size and colour, including the appearance of flashing, will vary from brick to brick. Often the character created by this variability is the very reason bricks are desirable, however we strongly recommend that bricks with the same batch number are used on your project and that all the bricks you need are delivered in one consignment.

Salt Attack Resistance (Exposure Grade)
Bricks are most commonly classified in two categories for Salt Attack Resistance:
1. Exposure Grade – the product is suitable for a saline or severe marine environment.
2. General Purpose – the product is suitable for general environmental conditions but not in saline or marine environments.

A severe marine environment is defined as up to 1km from a surf coast or up to 100m from a non-surf coast.

A marine environment is defined as from 1km to 10km from a surf coast or between 100m and 1km from a non-surf coast.

Blending of product
We recommend that bricks should be carefully blended from at least four different pallets at the time of laying to provide a consistent colour and texture.

Warranty
We do not warrant that our clay products will match any sample or brochure. The brick colours shown in this brochure are an indication only and may be different from the actual product. It is a good idea to confirm the availability and view the latest batch colours at one of our Selection Centres before making your decision, and always check the delivered packs as soon as possible. All warranty claims must be made prior to the product being laid.

Brick cleaning
Care must be taken when cleaning bricks at the end of your building project. Some bricks require special consideration when being cleaned. Please contact PGH™ or Think Brick Australia for specific details.

Delivery
To ensure the safe and timely arrival of your bricks, there are a number of considerations that must be made. For specific details, please contact our Customer Service Centre on 13 15 79.

Important Information

WARNING  Bricks contain crystalline silica. Cutting or grinding these products creates dust, which may be hazardous and should not be inhaled. Please ensure that when cutting or grinding, an approved mask (respirator) is worn.

Terms of sale
PGH Bricks & Pavers™ is unable to accept liability for costs incurred as a result of failure or delay in delivery of the product. For a complete copy of our Terms of Sale, please contact a PGH™ Selection Centre for terms and conditions.

At PGH™ Selection Centres, we actually are different. When you visit our Selection Centres, you will be assisted by one of our Colour Consultants to design the look of your new home with our easy Colour Selection tools.

PGH™ have specially designed selection tools all created to make the selection of your exterior scheme easier. Select the Colour Collection you prefer from our Colour Wall. Try different colour combinations with Colour Touch to see how these combinations work for your new home.

There is nothing like seeing colours and textures in real life, so step outside and stroll through the External Display Area where you'll find displays of bricks, roof tiles and pavers. When you've decided on your brick, take away your free samples to show your family and friends.

To make the right brick choice, visit our Selection Centres

Why choose bricks?

As a CSR business, PGH Bricks & Pavers™ is one of Australia's largest and most innovative brick makers. We kiln fire a blend of clay, sand and shale to produce bricks that are as beautiful and enduring as the rich earth they're formed from.

With their lasting colour and superb texture, PGH™ bricks will provide a warm welcome home time and time again.

- sustainable – natural, recyclable and energy efficient
- temperature control – with proper design, your home will be warm in winter, cool in summer
- low maintenance – enduring colour so no need to paint
- design flexibility
- acoustic – reduces noise and lets you enjoy a quiet haven
- strong and safe – durable, non-combustible, termite resistant, won't rot or decay
- cost effective – less upfront costs and virtually no ongoing costs

- whatever the design or colour trend, there's a brick to suit your individual needs
