Virginia’s Death Penalty

Innocent People May Die

There have been 143 exonerations from death row nationwide since 1973. Virginia came within days of executing Earl Washington Jr. before allowing DNA evidence to be examined which proved his innocence. The vast majority of capital cases have no biological evidence to test.

It Does Not Deter Crime

A study of leading criminologists published in June 2009 in Northwestern University School of Law’s *Journal of Criminal Law and Criminology* found:

- 88% of the country’s top criminologists do not believe the death penalty acts as a deterrent to homicide.
- 87% percent of the expert criminologists believe that abolition of the death penalty would not have any significant effect on murder rates.
- 75% of the respondents agree that “debates about the death penalty distract Congress and state legislatures from focusing on real solutions to crime problems.”

The Death Penalty Is Too Expensive

No cost study has yet been done in VIRGINIA. Those that have studied the cost found irrefutable data that the death penalty costs taxpayers more than life imprisonment:

- In CALIFORNIA the current system costs **$137 million per year**; it would cost **$11.5 million** for a system without the death penalty. *(California Commission for the Fair Administration of Justice, July 2008)*
- In KANSAS, the costs of capital cases are **70% more expensive** than comparable non-capital cases, including the costs of incarceration. *(Kansas Performance Audit Report, December 2003)*
- NORTH CAROLINA taxpayers spend **$2.16 million per execution** over the costs of sentencing murderers to life imprisonment. *(Duke University, May 1993)*
- In FLORIDA **$51 million per year** is spent above what it would cost to punish all 1st-degree murderers with life without parole. *(Palm Beach Post, January 2000)*
- In MARYLAND death penalty cases cost **3 times more** than non-death penalty cases, or $3 million for a single case. *(Urban Institute, *The Cost of the Death Penalty in Maryland*, March 2008)*

* The greatest costs associated with the death penalty occur prior to and during trial, not in post-conviction proceedings. Even if all post-conviction proceedings (appeals) were abolished, the death penalty would still be more expensive than alternative sentences.
Race Plays A Role

Researchers in Virginia found that a person is over three times as likely to be sentenced to death when the victim is white vs. when the victim is black. (Virginia Joint Legislative Audit and Review Commission of Capital Punishment) Among persons executed for interracial murders in the US: white defendant/black victim = 15 executions, black defendant/white victim = 228 executions. (Death Penalty Information Center)

Geography Determines Execution Rates

Since 1977, about 90% of all US executions have been carried out in the south. At 110 persons executed since 1982, Virginia is second only to Texas in the number of people executed. In Virginia, murder convictions ending in the death penalty are twice as likely in suburban and rural jurisdictions as in urban jurisdictions.

Public Opinion Favors The Alternative

Support for Alternatives to the Death Penalty

- Life without parole plus restitution: 39%
- Life with parole: 9%
- Life without parole: 13%
- Death penalty: 33%
- No opinion: 6%

• A 2010 poll by Lake Research Partners found that a clear majority of voters (61%) would choose a punishment other than the death penalty for murder.
