**Empowering Knowledge™**

*Elsevier Science and Technology Books* deliver targeted content that enables the advancement and application of research. Year after year readers use our books to drive advancements in their fields.

Our tools and content on ScienceDirect are:

- **Easy to use** and navigate
- **Comprehensive**, encompassing eBook and journal content
- **Highly available**, with full text across desktop and mobile platforms
- **Current**, including articles in press
- **Enhanced** by visualization tools, Scopus information, and more
- **Collaborative**, with storing and sharing across platforms like Mendeley and RefWorks

Our foundational content—including **Reference Modules**, unique resources that are **trustworthy, current, discoverable, and hosted on ScienceDirect**—complements original research in journal articles.

Our **Legacy Collection** on ScienceDirect, in 20 subject areas, ensures that valuable historical content is **discoverable and searchable**, saving time and resources.
Essentials of Medical Biochemistry, 2e
With Clinical Cases
By N. V. Bhagavan and Chung-Eun Ha
Expert biochemist N. V. Bhagavan’s new work condenses his successful Medical Biochemistry texts, along with numerous case studies, to produce an extensive guide for students and professionals. The research-driven content employs four-color illustrations to explain events and processes occurring at molecular and macromolecular levels of physiologic regulation, clinical effects, and interactions.
JUN 2015 • ISBN: 9780124166875

Introductory Experiments on Biomolecules and Their Interactions
By Robert K. Delong and Angela Zhou
This book presents a novel approach to teaching biomolecules in the lab, featuring the requisite fundamentals coupled with the author’s experience in industry. Unique, up-to-date experiments give students the tools to demonstrate the knowledge and theories they’ve learned.
JUN 2015 • ISBN: 9780128009697

Biotechnology, 2e
By David P. Clark and Nanette J. Pazdernik
This up-to-date text covers a wide range of topics, including forensics and bioethics, helping readers understand molecular biotechnology as a scientific discipline, how the research in this area is conducted, and how this technology may impact the future.
MAY 2015 • ISBN: 9780123850157

Channels, Carriers, and Pumps, 2e
An Introduction to Membrane Transport
By Wilfred D. Stein and Thomas Litman
This text provides an introduction to the principles of membrane transport and how molecules and ions move across the cell membrane by simple diffusion and specialized membrane components, including channels, carriers, and pumps. It emphasizes the quantitative aspects of such movement and their interpretation in transport kinetics.
DEC 2014 • ISBN: 9780124165793
Human Chorionic Gonadotropin (hGC), 2e
By Laurence Cole
The comprehensive second edition describes the detailed biology, clinical chemistry, and perspectives of hCG and associated molecules, and examines hCG, hyperglycosylated hCG, and hCG free ß-subunit, three separate and independent molecules with totally sovereign physiological functions. It includes coverage of the many discoveries made in the past five years.
DEC 2014 • ISBN: 9780128007495

Fed-Batch Fermentation
A Practical Guide to Scalable Recombinant Protein Production in Escherichia coli
By Garner G. Moulton
This text provides a guide for recombinant protein production in E. coli using a fed batch fermentation process. It is ideal for teaching and R&D labs that need a quick and reproducible process for recombinant protein production, also providing a template for the production of recombinant protein in clinical trials.
OCT 2014 • ISBN: 9781907568923

Textbook of Veterinary Physiological Chemistry, 3e
By Larry R. Engelking
This text offers broad coverage of biochemical principles, and is the only recent biochemistry book created specifically for the veterinary field. It is written in a succinct and concise style that includes an overview summary section, numerous illustrations, targeted learning objectives, and end of chapter questions to assess understanding.
JUL 2014 • ISBN: 9780123919090

Transgenic Animal Technology, 3e
A Laboratory Handbook
Edited by Carl A. Pinkert
This well-illustrated handbook, which includes updates on genetic engineering technologies, covers the technical aspects of gene transfer — from molecular methods to whole animal considerations — for important laboratory and domestic animal species. This key resource for researchers and training tool for technicians and students describes methodologies as employed by leading laboratories.
JUN 2014 • ISBN: 9780124104907
Animal Biotechnology
Models in Discovery and Translation
Edited by Ashish S. Verma and Anchal Singh
Animal biotechnology is a broad field encompassing the polarities of fundamental and applied research. It has become one of the most essential subjects for those studying life sciences. This book introduces applications of animal biotechnology and implications for human health and welfare.

DEC 2013 • ISBN: 9780124160026

Experiments in the Purification and Characterization of Enzymes
A Laboratory Manual
By Thomas E. Crowley and Jack Kyte
This book acquaints students with fundamental and advanced techniques in experimental biochemistry. With a focus on purification and characterization of enzymes from various source materials, this work encourages critical thinking and analysis, and covers how to evaluate and effectively use scientific data.

FEB 2014 • ISBN: 9780124095441

Extracellular Glycolipids of Yeasts
Biodiversity, Biochemistry, and Prospects
By Ekaterina Kulakovskaya and Tatiana Kulakovskaya
This book provides much needed clarity and a comprehensive view of the biochemistry, biological activity, and practical application of extracellular glycolipids of yeast. It is a guide to the basic data that will aid in these increasingly generative pursuits.

JAN 2014 • ISBN: 9780124200692

Marine Enzymes for Biocatalysis
Sources, Biocatalytic Characteristics and Bioprocesses of Marine Enzymes
By Antonio Trincone
This text addresses the use of marine enzymes in biocatalysis through a series of chapters contributed by leading scientists within academic and industrial fields. It examines the nature and level of interest in marine biological diversity, also outlining the fundamentals of biocatalysis, including microbial enzymes and animal or plant proteins.

SEP 2013 • ISBN: 9781907568800
Bioconjugate Techniques, 3e
By Greg T. Hermanson
This book is the essential guide to the modification and cross-linking of biomolecules for use in research, diagnostics, and therapeutics. It provides highly detailed information on the chemistry, reagent systems, and practical applications for creating labeled or conjugate molecules.
AUG 2013 • ISBN: 9780123822390

Bioenergetics, 4e
By David G. Nicholls and Stuart J. Ferguson
The extensively revised fourth edition of this essential book on chemiosmotic theory and membrane bioenergetics takes into account newly determined protein structures that provide molecular insight into chemiosmotic energy transduction and reviews explosive advances in mitochondrial physiology.
JUL 2013 • ISBN: 9780123884251

Proteomic and Metabolomic Approaches to Biomarker Discovery
Edited by Haleem J. Issaq and Timothy D. Veenstra
As the only publication that covers techniques from both proteomics and metabolomics, this text includes all steps involved in biomarker discovery — from study design to study execution. The work introduces biomarkers for fewer clinical errors in research, and includes techniques from a range of biomarkers discovery.
JUN 2013 • ISBN: 9780123944467

An Introduction to Biological Membranes From Bilayers to Rafts
By William Stillwell
Offering cohesive, foundational information, this publication is valuable for advanced undergraduate students, graduate students, and membranologists who seek a broad overview of membrane science. This book reviews the many aspects of membrane structure/function that bridge membrane biophysics and cell biology.
JUL 2013 • ISBN: 9780444521538
An Introduction to Biotechnology
The Science, Technology and Medical Applications
By W. T. Godbey
This biotechnology textbook aimed at undergraduates covers the basics of cell biology, biochemistry, and molecular biology, and introduces laboratory techniques specific to the technologies addressed. It presents specific biotechnologies at both the theoretical and application levels.
OCT 2014 • ISBN: 9781907568282

Mechanisms of Morphogenesis, 2e
By Jamie Davies
This edition provides a reference on the mechanisms of cell and tissue morphogenesis in a range of organisms, including prokaryotes, animals, plants, and fungi. It equips readers with an understanding of modern research, focusing on how the genetic program translates to generate cell shape, cell migration, and shape, amongst others.
APR 2013 • ISBN: 9780123910622

Handbook of Proteolytic Enzymes, 3e
Three-Volume Set
Edited by Neil D. Rawlings and Guy S. Salvesen
This new edition, available online for the first time, is a fully revised and updated major reference work. It includes enhanced options, such as online multimedia, cross-referencing capabilities, integrated online delivery, and closer integration with the online MEROPS database of peptidases and their inhibitors. The new edition features articles on approximately 1,000 different proteolytic enzymes written by acknowledged experts in the field.
DEC 2012 • ISBN: 9780123822192

Sox2
Biology and Role in Development and Disease
By Hisato Kondoh and Robin Lovell
This book offers insights into how Sox2, a critical transcription factor, plays a key role in pluripotency induction, maintenance, and development. It provides a foundational knowledge on the topic, and is an ideal tool for organizing new research projects, preparing lessons and seminars, and writing theses or research papers.
JUN 2015 • ISBN: 9780128003527
Neural Surface Antigens
From Basic Biology Towards Biomedical Applications
Edited by Jan Pruszak
This book details neural stem cell biology and functional studies in human and mouse models significant to translational science, emphasizing the functional aspects of stem cells and biomarker expression at various stages. This reference outlines stem cells’ role in neurogenesis and neural development, and in biomarker and surface antigens.

MAY 2015 • ISBN: 9780128007815

Sertoli Cell Biology, 2e
Edited by Michael D. Griswold
This book summarizes the progress since the last edition and emphasizes the new information available on Sertoli/germ cell interactions. This information is especially timely, since the progress in the past few years has been exceptional, and it relates to control of sperm production in vivo and in vitro.

DEC 2014 • ISBN: 9780124170476

Cellular Endocrinology in Health and Disease
Edited by Alfredo Ulloa-Aguirre and P. Michael Conn
This book covers basic cellular endocrinology from a cell biology perspective. Edited by experts in molecular and cellular endocrinology, this publication provides vital information to cross-disciplinary research, detailing how cellular endocrine action contributes to system physiology and mediates endocrine disorders.

APR 2014 • ISBN: 9780124081345

Fluorescence Microscopy
Super-Resolution and other Novel Techniques
Edited by Anda Cornea and P. Michael Conn
This book is a practical fluorescence microscopy guide, offering methods and best practices in cell imaging. Of interest to biological and biomedical researchers, each chapter explains how a technique works, how it compares to similar techniques, and how to avoid common problems.

MAR 2014 • ISBN: 9780124095137
Neural Crest Cells
Evolution, Development and Disease
By Paul A. Trainor
This book summarizes discoveries of historical significance and provides in-depth, current analyses of the evolution of neural crest cells, their contribution to embryo development, and their roles in disease. The text includes content on applications for tissue engineering, repair, and regeneration.
DEC 2013 • ISBN: 9780124017306

Cell Press Reviews*
Core Concepts in Cell Biology
With topics ranging from chromosomes to the cytoskeleton, organelle function, and cell morphogenesis, this work provides an opportunity for both experts and those new to the field to gain an understanding of the most recent advances and remaining questions in the cellular world.
DEC 2013 • ISBN: 9780124201934

Bio-Nanoimaging
Protein Misfolding & Aggregation
Edited by Vladimir Uversky and Yuri Lyubchenko
Nanoimaging technology has proved crucial in understanding protein-misfolding pathologies and in potential drug design aimed at the inhibition or reversal of protein aggregation. This book provides a unique introduction to both novel and established nanoimaging techniques for visualization and characterization of misfolded and aggregated protein species.
NOV 2013 • ISBN: 9780123944313

Bacterial Cellular Metabolic Systems
Metabolic Regulation of a Cell System with 13C-Metabolic Flux Analysis
By Kazuyuki Shimizu
Chapters discuss metabolic mechanisms and the metabolic regulation of a cell, the response of global regulators to a specific culture environment, conventional and 13C-metabolic flux balance analysis and its applications, and the effect of a specific gene knockout on the metabolism.
MAR 2013 • ISBN: 9781907568015
Design, Operations, and Infrastructure
Edited by Thomas H. Payne
This second edition prepares readers for the electronic age of healthcare delivery. It is written for those migrating into clinical computing operations roles, and is ideal for those preparing for clinical informatics board certification. The text focuses on new tech paradigms, including cloud computing and concurrency in this emerging field.

FEB 2013 • ISBN: 9780124202177

Translational Systems Biology
Concepts and Practice for the Future of Biomedical Research
By Yoram Vodovotz and Gary An
In this book, the authors provide a foundational description of current barriers facing biomedical research, and how these barriers could be overcome by a robust, scalable approach that will form the underpinning of biomedical research. Essays provide the intellectual basis of the translational dilemma and examples in the study of inflammation.

OCT 2014 • ISBN: 9780123978844

Science Methodology and What Can Go Wrong
An Interdisciplinary Approach
By Ülo Maiväli
This text discusses what can go wrong in biological science, providing an unbiased view and understanding of scientific methods, statistics, data interpretation, and ethics. It includes practical examples and real-life applications, exposing the reader to scientific problems and solutions, informed perspectives from history, philosophy, sociology, and social psychology.

JUN 2015 • ISBN: 9780124186897

The Dictionary of Cell & Molecular Biology, 5e
Edited by J. M. Lackie
With more than 12,000 entries, color illustrations, and a breadth of terms across bioscience, including plant molecular biology, microbiology and biotechnology, this revised fifth edition includes short, cross-referenced definitions of important technical terminology and features numerous tables and other useful features.

FEB 2013 • ISBN: 9780123849311
Computational Systems Biology, 2e
From Molecular Mechanisms to Disease
Edited by Roland Eils and Andres Kriete
This revised new edition of the classic work discusses experimental and theoretical foundations of the function of biological systems as systems biology advances to provide clinical solutions to complex medical problems. It focuses on the engineering of biological systems and network modeling.

Dynamic Systems Biology Modeling and Simulation*
By Joseph DiStefano III
This book consolidates and unifies classical and contemporary multiscale methodologies for mathematical modeling and computer simulation of dynamic biological systems, emphasizing biomodeling from real biodata for use in real applications.

Deterministic Versus Stochastic Modelling in Biochemistry and Systems Biology
By Paola Lecca, Ian J. Laurenzi, and Ferenc Jordan
The authors introduce and critically review the deterministic and stochastic foundations of biochemical kinetics. Chapters cover applied stochastic process theory for researchers and students studying and working in the field of modeling and simulation of biological processes at molecular scale.

Mathematical Concepts and Methods in Modern Biology Using Modern Discrete Models
Edited by Raina Robeva and Terrell Hodge
Based on ongoing research and the national initiative toward the “new biology” as well as increasing efforts to apply quantitative approaches to biological questions, this work offers a framework to systematically analyze, predict, and modulate the behavior of complex biological systems.
Handbook of Systems Biology
Concepts and Insights
Edited by Marian Walhout, Marc Vidal, and Job Dekker
This book provides an entry point into systems biology for researchers in genetics, molecular biology, cell biology, microbiology, and biomedical science, helping them understand the key concepts in expanding their work. Chapters are organized around broad themes of organelles and organisms, systems properties of biological processes, cellular networks, and more.

NOV 2012 • ISBN: 9780123859440

Epigenetic Cancer Therapy
By Steven Gray
This work covers the basic background of the epigenome, aberrant epigenetics, and its potential as a target for cancer therapy, and includes chapters on the state of epigenome knowledge in specific cancers (including lung, breast, and prostate). It encompasses both large-scale intergovernmental initiatives as well as recent findings.

JUN 2015 • ISBN: 9780128002063

Economic Evaluation in Genomic Medicine
By George Patrinos
This book introduces health economics and economic evaluation to genomic clinicians and researchers and conversely introduces genomic medicine to health economists. Each chapter includes an executive summary, questions, and cases, with online supplementary material such as process guides, maps, flow charts, and economic evaluation spreadsheets also available.

APR 2015 • ISBN: 9780128014974

Transgenerational Epigenetics
Edited by Trygve Tollefsbol
Clinical interventions in transgenerational epigenetic inheritance may be on the horizon to help prevent diseases before the offspring are born or to reduce the severity of diseases at the very earliest stages of development in utero. This book provides a comprehensive analysis of the inheritance of epigenetic phenomena between generations.

MAY 2014 • ISBN: 9780124059443
Genomic Control Process
Development and Evolution
By Isabelle S. Peter and Eric H. Davidson
This book generates a unifying framework for understanding the genomically encoded control processes that determine the course of animal development and evolution, focusing on the fundamental logic of regulatory networks that operate in diverse contexts. Evolutionary mechanisms that affect body plan are explored by considering the consequences of structural change in developmental control systems.
FEB 2015  •  ISBN: 9780124047297

Epigenetics and Dermatology
Edited by Qianjin Lu, Christopher C. Chang, and Bruce C. Richardson
This book explores the role of epigenetics in the pathogenesis of autoimmune-related skin diseases and skin cancer. Leading contributors cover common and uncommon skin conditions, explaining how environmental exposures in all stages of life may result in epigenetic changes that lead to development of some skin diseases.
DEC 2014  •  ISBN: 9780128009574

Applied Plant Genomics and Biotechnology
Edited by Palmiro Poltronieri and Yiguo Hong
This text discusses plant functional genomic studies and future developments, exploring new technologies supporting the genetic improvement of plants and the production of plant varieties more resistant to biotic and abiotic stresses. It provides research on plant biology, functional genomics, and the application of RNA silencing and interference, amongst other topics.
NOV 2014  •  ISBN: 9780081000687

Principles of Developmental Genetics, 2e
Edited by Sally A. Moody
With expert coverage of all major events in early embryogenesis and the organogenesis of specific systems, and supplemented with representative clinical syndromes, this classic work discusses processes of normal development in embryonic and prenatal animals, including humans. This edition covers systems biology, stem cell biology, new technologies, and clinical disorders.
SEP 2014  •  ISBN: 9780124059450
Cancer Genomics
From Bench to Personalized Medicine
Edited by Graham Dellaire, Jason Berman, and Robert Arceci
This book addresses how recent technological advances are shaping how we diagnose and treat cancer. Built on the historical context of cancer genetics over the past 30 years, the book provides a snapshot of the current issues and state-of-the-art technologies used in cancer genomics.
DEC 2013 • ISBN: 9780123969675

Epigenetics in Psychiatry
Edited by Jacob Peedicayil, Dennis Grayson, and Dimitrios Avramopoulos
This book covers all major areas of psychiatry in which extensive epigenetic research has been performed, fully encompassing a diverse, maturing field, including drug addiction, bipolar disorder, epidemiology, cognitive disorders, and the uses of putative epigenetic-based psychotropic drugs. Each chapter correlates epigenetics with relevant advances across genomics, transcriptomics, and proteomics.
JUN 2014 • ISBN: 9780124171145

Gene Therapy
Potential Applications of Nanotechnology
By Surendra Nimesh
Dr. Nimesh emphasizes the various aspects of nanotechnology-based gene therapy, with chapters detailing the tools and techniques available for preparation, in vitro, and in vivo characterization of nanoparticles, and exhaustive details on polymeric systems employed for gene therapy.
OCT 2013 • ISBN: 9781907568404

Handbook of Pharmacogenomics and Stratified Medicine
Edited by Sandosh Padmanabhan
This volume provides a translational resource for study design, interpretation of primary literature, and addressing patient queries so researchers and practitioners alike may gain insight into the practical aspects of pharmacogenomics. It reviews the tools available, and is especially helpful in developing research proposals and grants.
MAY 2014 • ISBN: 9780123868824

</table>
**Practical Predictive Analytics and Decisioning Systems for Medicine**
Informatics Accuracy and Cost-Effectiveness for Healthcare Administration and Delivery Including Medical Research

By Linda Miner, Pat Bolding, Joseph Hilbe, Mitchell Goldstein, Thomas Hill, Robert Nisbet, Nephi Walton, and Gary Miner

This book presents predictive analytic models and applications to predict more accurate outcomes to help improve care in the healthcare industries in the most cost-efficient manner.

SEP 2014 • ISBN: 9780124116436

**Data Mining for Bioinformatics Applications**

By He Zengyou

This book uses 45 bioinformatics problems that have been investigated in recent research as examples of applied data mining techniques. The entire data mining process is described, ranging from data preprocessing to modeling and result validation.

JUN 2015 • ISBN: 9780081001004
Clinical Decision Support, 2e
The Road to Broad Adoption
Edited by Robert A. Greenes
Authored by leaders in the field, this book contains a detailed roadmap on the development and integration of clinical decision support systems into point-of-care and national regulatory frameworks. With 40% updated content, this edition features online supplementary materials.

APR 2014 • ISBN: 9780123984760

Bioinformatics for Biomedical Science and Clinical Applications
By Kung-Hao Liang
Dr. Kung-Hao Liang provides biomedical researchers and students with a state-of-the-art assessment of the application of bioinformatics to biomedical science and clinical applications.

JUL 2013 • ISBN: 9781907568442

Methods in Biomedical Informatics
A Pragmatic Approach
Edited by Indra Neil Sarkar
This book incorporates both methodological approaches and their potential application in the domains associated with biomedical informatics and balances foundational coverage of core topics in biomedical informatics with practical “in-the-trenches” scenarios.

OCT 2013 • ISBN: 9780124016781

Principles of Biomedical Informatics, 2e
By Ira J. Kalet
This revised edition of the most authoritative guide to biomedical informatics theory and techniques provides expanded practical examples integrated with the core ideas and theoretical foundations. It discusses user interfaces, interactive graphics, and reference material on programming languages.

SEP 2013 • ISBN: 9780124160194
Effective Science Communication
Papers, Posters, and Presentations
By Gregory S. Patience, Daria C. Boffito, and Paul Patience
This text serves as a guidebook on science writing and communication, giving professors, students, and professionals in the STEM fields a practical resource. It advocates a concise and clear writing style, allowing readers to concentrate on content. It is useful for both native and non-native English speakers.
JUN 2015 • ISBN: 9780128015001

Protein Bioinformatics
From Sequence to Function
By M. Michael Gromiha
This single-source reference covers all aspects of proteins, explaining fundamentals, synthesizing the literature, and demonstrating the most important bioinformatics tools available for protein analysis, interpretation, and prediction.
SEP 2010 • ISBN: 9788131222973

Success Strategies From Women in STEM, 2e
A Portable Mentor
Edited by Peggy A. Pritchard and Christine S. Grant
This comprehensive and accessible manual contains career advice, mentoring support, and professional development strategies for women in STEM fields. It features new and essential chapters on leadership and negotiation, as well as important coverage of career management, networking, social media, communication skills, and more.
JUN 2015 • ISBN: 9780123971814

Planning a Career in Biomedical and Life Sciences
Making Informed Choices
By Avrum I. Gotlieb
This book provides tools to effectively plan ahead for a satisfying and successful career in biomedical and life sciences, ending with job hunting, securing an academic or non-academic position, achieving tenure and promotion, and launching into leadership positions.
JAN 2015 • ISBN: 9780128022429
Biotechnology Entrepreneurship
Starting, Managing, and Leading Biotech Companies

*Edited by Craig Shimasaki*

A comprehensive and authoritative guide to biotechnology enterprise and entrepreneurship, this work supports the international educational community in training the biotechnology leaders of tomorrow by using diverse diagrams, graphics, and business flowcharts to support effective management and decision-making.

APR 2014 • ISBN: 9780124047303

Equitable Solutions for Retaining a Robust STEM Workforce
Beyond Best Practices

*By Donna Joyce Dean and Janet Bandows Koster*

This text offers strategies and proven recommendations that accommodate work/life satisfaction for those in the STEM fields. It covers dual careers and strategic decision-making, childcare/dependent care, family-friendly policies, and more.

FEB 2014 • ISBN: 9780128002155

Managing and Leading for Science Professionals
(What I Wish I’d Known While Moving Up the Management Ladder)

*By Bertrand C. Liang*

Focusing on the experiences of scientists and engineers, this book teaches ways to speak top management’s language and explores real issues of importance for technical students and managers who want to move into leadership positions.

OCT 2013 • ISBN: 9780124166868

From Academia to Entrepreneur
Lessons From The Real World

*By Eugene Khor*

This book provides practical advice on entrepreneurship interspersed with insights the author gained from starting his own business and in his associations with other ventures. These same insights can be applied to bring a technology concept from academia to an enterprise.

OCT 2013 • ISBN: 9780124105164
Interdisciplinary Mentoring in Science Strategies for Success
By Ofelia Olivero
This practical resource on interdisciplinary mentoring outlines what successful mentoring is and how it relates to scientists today. Backed by current evidence and research, it provides a better understanding of the mentoring relationship and the overall process as it applies to the increasingly interdisciplinary field of science.

OCT 2013 • ISBN: 9780124159624

A Practical Guide to Writing a Ruth L. Kirschstein NRSA Grant
By Andrew D. Hollenbach
This text provides a solid resource for trainees and their mentors to use as a guide when constructing F30, F31, and F32 grant applications. It presents applicants with insider knowledge on the grant review process, the biases that contribute to the reviews, the extent of information required, and more.

OCT 2013 • ISBN: 9780124201873

Translational Regenerative Medicine
Edited by Anthony Atala and Julie Allickson
This reference outlines the lifecycle for effective implementation of discoveries in regenerative medicine. By addressing science, technology, development, regulatory, manufacturing, intellectual property, investment, financial, and clinical aspects, this work holistically examines the translation of science and disseminates knowledge for practical use of regenerative medicine tools, therapeutics, and diagnostics.

DEC 2014 • ISBN: 9780124103962

MicroRNA in Regenerative Medicine
Edited by Chandan K. Sen
This work encapsulates the uses of miRNA across stem cells, developmental biology, tissue injury, and tissue regeneration. Fifty expert contributors provide focused coverage of methodologies, intervention, and tissue engineering, addressing key topics of this fast-emerging field, pointing to current and future significance of clinical research in the miRNA area.

NOV 2014 • ISBN: 9780124055445
Principles of Tissue Engineering, 4e
Edited by Robert Lanza, Robert Langer, and Joseph Vacanti
This definitive source in tissue engineering includes a greatly expanded focus on stem cells. Coverage includes adult and embryonic stem cells and progenitor populations that may soon lead to new tissue engineering therapies for heart disease, diabetes, and a wide variety of other diseases that afflict humanity. Additionally, new chapters on recent clinical experience in applying tissue engineering are included.

NOV 2013 • ISBN: 9780123983589

Regenerative Medicine Applications in Organ Transplantation
Edited by Giuseppe Orlando
Regenerative medicine is changing the premise of solid organ transplantation, requiring transplantation investigators to become familiar with regenerative medicine investigations. This book illustrates how these two fields are coming together and can benefit one another. It discusses technologies being developed, methods being implemented, and which are the most promising.

NOV 2013 • ISBN: 9780123985231

Cord Blood Stem Cells Medicine
Edited by Catherine Stavropoulos-Giokas, Dominique Charron, and Cristina Navarrete
This book discusses current applications for cord blood stem cells and techniques for banking cord blood, an alternate source of stem cells, which can be used to treat a myriad of disorders and possibly carry the future of research and medicine in treating tissue damage, genetic disorders, and degenerative diseases.

DEC 2014 • ISBN: 9780124077850

Stem Cell Biology and Tissue Engineering in Dental Sciences
Edited by Ajaykumar Vishwakarma, Paul Sharpe, Songtao Shi, and Murugan Ramalingam
This book highlights the importance of the fast-paced area of stem cell research to the field of dental sciences. It compiles basic embryology and developmental biology, relating it to tissue regeneration and repair, biomaterials, and current applications in dental science.

NOV 2014 • ISBN: 9780123971579
**Stem Cells, 2e**

**Scientific Facts and Fiction**

*By Christine Mummery, Anja van de Stolpe, Bernard Roelen, and Hans Clevers*

This book provides background on stem cells in a clear and well-organized manner. It supplies an understandable review of the history, facts, and current knowledge, distinguishing itself from the multiplicity of websites on the subject by being scientifically, politically, and ethically neutral.

JAN 2014 • ISBN: 9780124115514

---

**Mesenchymal Stem Cells in Cancer Therapy**

*By Khalid Shah*

This book sheds light on current stem cell-based targeted therapies for cancer and informs readers about critical and cutting-edge stem cell therapies. It also points out the vast plain of unresolved questions in stem cell research for cancer therapeutics.

JAN 2014 • ISBN: 9780124166066

---

**Cell Press Reviews**

**Stem Cells to Model and Treat Disease**

This publication offers essays from leaders in the stem cell field on some of the most important questions being faced in clinics and research labs, including the safety and efficacy of stem cell treatments, the use of stem cells to regenerate organs, the use of reprogrammed stem cells to model and treat disease, and the use of stem cells in clinical applications, such as HIV disease and stroke.

DEC 2013 • ISBN: 9780124201910

---

**Essentials of Stem Cell Biology, 3e**

*Edited by Robert Lanza and Anthony Atala*

This book serves the needs of those embracing the latest advances in stem cells. A combined effort of seven editors and more than 200 scholars and scientists whose pioneering work has defined our understanding of this field, this book leaves no topic uncovered.

NOV 2013 • ISBN: 9780124095038
Mesenchymal Stem Cells and Skeletal Regeneration
By Elena Jones, Peter Giannoudis, Xuebin Yang, and Dennis McGonagle
This book covers current understanding of the role of mesenchymal stem cells (MSCs) and other mesenchymal progenitors in skeletal regeneration. It summarizes recent findings pertaining to the definition and characterization of MSCs in skeletal tissues and discusses the mechanisms of their actions in regeneration of bone in vivo.
MAR 2013 • ISBN: 9780124079151

Principles of Cloning, 2e
Edited by Jose Cibelli, Ian Wilmut, Rudolf Jaenisch, John Gurdon, Robert Lanza, Michael West, and Keith H. S. Campbell
This book is a comprehensive source on animal cloning. The contributing authors are the principal investigators on each of the animal species cloned to date, presenting state-of-the-art information in their respective areas. Coverage is focused on the basic biological mechanisms of how cloning works, as well as current and potential applications in basic biology, agriculture, biotechnology, and medicine.
OCT 2013 • ISBN: 9780123865410

Immune Biology of Allogeneic Hematopoietic Stem Cell Transplantation Models in Discovery and Translation
Edited by Gérard Socié and Bruce Blazar
With the use of illustrative figures, highlighted key issues, description of recent successes, and discussions of unanswered questions, this book brings together the current state of HSCT to enhance the prospects for the future.
DEC 2012 • ISBN: 9780124160040
Resident Stem Cells and Regenerative Therapy
Edited by Regina Coeli dos Santos Goldenberg and Antonio Carlos Campos de Carvalho
This work features basic research in tissue specific stem cells, experiments with animal models, and clinical trials that are transforming the field of regeneration. It provides a clear understanding of endogenous stem cells, their role in current regenerative therapies, and prospects for future research.
SEP 2012 • ISBN: 9780124160125

Human Stem Cell Manual, 2e
A Laboratory Guide
Edited by Suzanne Peterson and Jeanne F. Loring
This practical and comprehensive guide for medical and biology researchers who want to use stem cells for basic research, disease modeling, drug development, and cell therapy applications offers a cohesive global view of the current state of stem cell research, with chapters written by pioneering stem cell researchers in Asia, Europe, and North America.
AUG 2012 • ISBN: 9780123854735

Elsevier offers a varied collection of eight stem cell and biochemistry series.
The series are published regularly, are highly cited, and have a high usage per article. For more information, visit us at store.elsevier.com/series.

- Progress in Molecular Biology and Translational Science
- Current Topics in Membranes
- Methods in Cell Biology
- International Review of Cell and Molecular Biology
- Advances in Genetics
- The Enzymes
- Current Topics in Developmental Biology
- Methods in Enzymology

Elsevier’s Reference Modules are reviewed and updated on a regular basis to ensure the information you receive is current and accurate.

Reference Modules combine thousands of related Elsevier reference work articles into one evolutionary source of trustworthy information now kept current with continuous, time-stamped currency review and article updates made by subject experts.

Organized around an interdisciplinary subject hierarchy, each Reference Module guides users to easily build foundational knowledge in a primary subject area, broaden perspective in new areas, and stay current where it matters most. Look for new Reference Modules in 2015.

For more information, visit ReferenceModules.com, or email us at refmods@elsevier.com.
