GALAXY RESOURCES LIMITED

Corporate Presentation
April 2016
ASX: GXY
Company Highlights

- One of the premier **global lithium opportunities** with market leading assets
- Diversified portfolio with **hard rock and brine based lithium assets** across multiple geographies
- Spodumene and tantalum production re-commenced at end Q1 2016 at Mt Cattlin, with **near-term cash flow expected**
- Flagship Sal De Vida Project in Argentina with market leading brine chemistry
- New management has **reduced net debt from over A$200m historically to A$20m today**
- Highly credentialed Management and Board with **strong networks in the key Asian lithium markets**
- Robust lithium macro trends with **surging demand from energy storage applications** and a lagged supply-side response
With a portfolio of both hard rock and brine based lithium assets, Galaxy is also well networked with key customers in the Asian lithium market.

**James Bay, Quebec, Canada – Hard Rock**
- 100% owned
- Lithium hard rock development
- 22.2Mt at 1.28% Li₂O
- Targeting to commence work on DFS in 2016

**Sal de Vida, Salta & Catamarca, Argentina – Brine**
- 100% owned
- Lithium and potash brine project, 1.1Mt LCE, 4.2Mt KCl
- Formal revision of DFS revision in mid 2016
- Formation of Owners Team
- Reactivation of pilot program

**Mt Cattlin, WA, Australia – Hard Rock**
- Lithium and tantalum mining & processing operations restarted in Q1 2016
- 16Mt at 1.08% Li₂O and 5.7Mlbs Ta₂O₅
- Secured offtake of 60kt of Spodumene to Chinese customers in 2016, 120kt in 2017
- Targeting maiden shipment July/August 2016

**Lithium production heavily concentrated in Asia**
- 88% of global capacity based in Asia
- China produces >50% of global lithium cathodes
- Galaxy is uniquely positioned with existing customer base from its previous Jiangsu Operations

**LiB Manufacturing Capacity (2015, MWh)**
- China: 39,010
- Korea: 16,059
- Japan: 11,978
- U.S.: 4,970
- Rest of World: 2,440
- EU: 1,798

*Source: CEMAC 2015*
An emerging global lithium business and recent addition to the S&P All Ordinaries Index, with leading institutional shareholders

1. Excludes 43.9m unlisted options on issue at various vesting and expiry dates with exercise prices between A$0.03 and A$1.16
2. Excludes 34.1m share appreciation rights
3. Includes cash reserve from debt facility
Market demand for lithium products continues to be very strong with increasing demand from the growing transport and energy storage sectors

- **Strong growth in lithium battery demand** over the next decade, driven by:
  - Continued increase in **demand for lithium battery powered devices** (consumer and portable electronics continuing to grow)
  - Increase in **demand for more advanced lithium batteries** (higher energy density in each generation of new devices)
  - Growth in **hybrid and electric vehicles, mass energy storage systems** (lithium batteries becoming the preferred technology)

- **Accelerating demand growth for lithium in China**, with a target set of 5 million electric vehicles to be on the road by 2020
  - Government continues push on green technology, targeting **4.8 million charging stations and 200,000 electric buses by 2020**

**Forecast lithium demand by application (Mt)**

- Lithium market driven by growth in battery demand +285% (2014-2025)

**Lithium battery demand by application (GWh)**

- Future demand driven by stable growth in consumer electronics and step function growth in auto

Source: signumBOX estimates, CEMAC 2015
Electrification Of China’s Transport Sector

China is becoming the global leader in the electrification of transport lithium battery demand across multiple segments

Overview

- Chinese demand will dwarf the increased demand from new lithium battery gigafactories
- The future of electric vehicles will be driven by adoption across a number of industries and applications including:
  - Light personnel transportation: two-wheel motorbikes, scooters, three-wheel hybrid vehicles, light EVs (Smart-size electric cars)
  - Heavy transportation applications: including public trains and buses
  - Logistics industry: high torque requirement areas including forklifts, scissor lifts, transport buggies

- China is at the forefront of the electric vehicle revolution:
  - Targeting 5 million electric vehicles by 2020
  - Push for up to 50% of government fleet vehicles to be new energy vehicles
  - Aiming for city transportation fleets to hit 20,000 electric buses
  - Continued conversion of 200m+ population of electric bikes to switch over from lead acid to lithium batteries
The China Market For Lithium

Significant tightening of available supply of lithium carbonate – continued rapid growth in demand from battery and energy storage segments

- China continues policy push in renewable energy – expansion of generation capacity, electrification of transportation etc.
  - Record breaking year for new energy (xEV) vehicle sales, over 379k units sold and projected at 500k+ units for 2016
  - Over 70% of LCE production in China is reliant on spodumene supply from Talison, limited availability of feedstock from domestic production and imports from South America
  - Tianqi and Albemarle (co-owners of Talison) have expressed that no spodumene will be made available for third parties, essentially creating a supply monopoly in China
  - Now Mt Cattlin has become the only new supply of spodumene into the market, lithium converters in China eagerly seeking alternate supply, offtakes already signed with premium pricing in light of recent price increases in lithium carbonate

Source: IRESS (Market caps as at 8-Apr-16), company disclosure
Notes: 1. Total production capacity and EV/Resource figures have been adjusted based on attributable project ownership. Assumed 50% ownership of both Mt Cattlin and James Bay for Galaxy and General Mining
2. Ownership figures are as at 8-Apr-16. General Mining have a sole and exclusive right to earn a 50% equity interest in both Mt Cattlin and James Bay by providing a A$23m of development funding over 3 years.
Mt Cattlin – Overview

A significant lithium and tantalum ore reserve with production coming online into a robust demand market

- Mt Cattlin is a spodumene (lithium concentrate) and tantalum mining operation, located in Ravensthorpe, Western Australia
  - In partnership with General Mining (ASX:GMM) who have earned a 50% equity interest in the project for A$25m
- Only new lithium mine to begin production, globally, since the recent large and sustained increases in lithium prices
  - Processing facility working through its 3 month ramp up to base case throughput rate of 800ktpa by Q3 2016
  - Funding of capex required for operating optimisation and working capital covered by pre-payments from offtakers
  - Restart capex sufficient to support an annual throughput capacity of 1.5Mt
- Significant cash flows to Galaxy from Mt Cattlin expected with first delivery in July/August 2016
  - Target production for 2017 c.150,000 tonnes
  - High margin operation with current operating costs

Source: General Mining Announcement (2015.08.04)

Note:
1 Galaxy understands that all material assumptions underpinning the production target and financial information set out in the General Mining announcement released continue to apply and have not materially changed.
Mt Cattlin – Project Economics

Mining and processing operations re-commenced at the end of Q1 2016, coming online in a strong pricing environment

Operations and offtake agreements

- Project metrics substantially enhanced due to continued improvement in lithium economics
  - Increased spodumene prices increase project revenues and improve production margins
  - Overall cost of mining operations also reduced now as part of industry trend in recent years
  - Combined with rising demand for lithium, all resulting in attractive economics for Mt Cattlin
- Major Chinese customers established for spodumene offtake which is the preferred feedstock for lithium converters

✓ 60,000 tonnes sold for 2016 delivery at US$600/t
✓ Negotiated upfront prepayment of 50% of 2016 volumes
✓ Binding commitment to purchase 120,000 tonnes in 2017
✓ Pricing not fixed for 2017 and will subject to further review, to be finalized in Q4 of 2016

Note:
1 Based on A$47.80/t (US$35.85/t at 0.75 AUD:USD) DFS forecast operating costs, 5% spodumene production royalties, 5% marketing fees payable, 5% impurity penalty, 75% spodumene recoveries, 6% Li spodumene grade and a 1.04% Li mined head grade

Annual production forecast (kt spodumene)

Net cash flow sensitivities (100% basis)

✓ Galaxy cash flows will be utilising A$214m in unused tax losses
✓ Further revenue upside from tantalite production (excluded from net cash flows shown)
Mt Cattlin – Production Restarted

Binding spodumene offtake agreements signed with production restarted on schedule at the end of Q1 2016

- **Plant Refurbishment**
  - Ongoing: Plant adjustments allowing for improved lithium recovery and lower operating expenditure

- **Lithium Offtake**
  - March 2016: Signed binding terms for 60,000t of volume in 2016 for US$600/t, negotiated 50% prepayment of 2016 contract value

- **Production Restart**
  - End Of Q1 2016: Mining and processing operations restarted at the end of Q1 2016

- **Accelerated Ramp-Up**
  - Post Q1 2016: Accelerated ramp-up period post restart of production

- **Potential Expansion**
  - Post initial ramp up: Diamond drilling commenced for further resource development; crushing circuit upgrade, newly fabricated fines circuit allow for throughput capacity up to 1.5mtpa

- **Mt Cattlin mining operations**
  - Mt Cattlin production has restarted with an accelerated ramp-up period expected
  - Significant volume material in tailings dam and ROM pads
    - Immediate focus at restart through to May is on the processing circuit
  - Also commenced mining of blasted ore in the Dowling pit, with ore to be stockpiled for processing in Q3 2016
  - Binding commitment from offtake partners to purchase 120k tonnes of lithium concentrate in 2017
Sal De Vida – Overview

One of the world’s largest and highest quality undeveloped brine deposits with significant expansion potential

- A premier lithium and potash brine development project
  - 100% owned by Galaxy
  - Located between Salta and Catamarca Province in Argentina, in an area known as the ‘Lithium Triangle’
- The Lithium Triangle is home to more than 60% of the world’s annual production of lithium
  - Sal de Vida is located on the same salar as FMC Lithium’s Fenix operations
- Brine projects have the advantages of lower operational costs and greater ability to expand production facilities
- Definitive Feasibility Study completed in 2013, assumed lithium carbonate price of US$5,500/t
  - Latest lithium carbonate pricing indications suggest prices of up to US$14,000/t in Japan and US$20,000/t in China
- Discussions underway for potential strategic JV partners at the project level

- Calculated NPV based on an assumed lithium carbonate price of US$5,500/t

- Most recent volume contract pricing for lithium carbonate in China now up to **US$20,000/t net**

- Formal review and revision of DFS financials by mid-2016, in light of recent macro-economic/policy changes in Argentina, and latest lithium market pricing

Notes:
1. Released 2013.04.12
2. Based on lithium carbonate pricing of US$5,500/t
Galaxy Resources Limited (ASX:GXY)

Sal De Vida – World Class Chemistry

One of the highest quality lithium brine developments globally, as demonstrated by its leading brine chemistry

- High lithium (Li) content to facilitate large scale production
- High potassium (K) yields significant potash credits, reducing operating costs
- Low magnesium (Mg), a low Mg/Li ratio reduces costs and yields higher quality, impurities are detrimental to being able to achieve grade spec

**Sal De Vida – 2016 Workplan**

Preparation work at Sal de Vida is ramping up with aim of bringing the flagship project into next stage of development

### Milestones For 2016

**Formal DFS revision to be completed by mid 2016**
- Revised DFS considering improved macro-economic conditions and Argentine policy developments expected to have a highly favourable impact on Sal de Vida’s DFS NPV
  - Most recent contract pricing for lithium carbonate in China recently up to US$12,800/t net
  - Recent devaluation of the Argentine peso
  - Removal of 5% export duty on high grade lithium
- Formal revision work on DFS underway
  - More detailed estimations based on current market pricing
  - Focused on major capital items, such as earthworks, key equipment etc.

**Owners Team being assembled**
- A multi-disciplinary team of specialised professionals is being assembled to take the project through its next stage of development
- Owners Team to be populated with industry veterans with decades of experience in the development and operations of lithium brine projects in South America, comprised of both local and international personnel

**Reactivation of pilot program**
- Previous pilot production facilities to be refurbished with planning underway for reactivation of the pilot program to commence ahead of main project build out

**Strategic discussions**
- Discussions ongoing for potential strategic JV partners for Sal De Vida at the project level
- Galaxy leveraging its strong industry network to commence discussions with strategic offtake partners for future production from Sal de Vida
James Bay – Overview

The project provides a valuable option for capitalising on long term lithium demand growth, potential future supply to North American markets

- Lithium pegmatite project located in James Bay, Quebec Province, Canada
  - Strategically located in a mining friendly jurisdiction with a low cost of energy and good infrastructure
- Galaxy owns 100% of James Bay, recently entered into an agreement with GMM, who have an option to earn 50% interest for US$5m in development funding over a 3 year period
- Agreement requires 50% of funds to be deployed in first 2 years
- Expected to begin project DFS in second half of 2016
  - Will take advantage of Mt Cattlin experience to fast track DFS process
- Total indicated and inferred resources are 22.2Mt at 1.28% Li₂O
  - Further drilling program to be used to expand current JORC resources
- Valuable option to be a future supplier into the rapidly growing North American market
Multiple catalysts should support a sustained market re-rating

- **MT CATTLIN**
  - Production ramp up
  - Production commenced in Q1 2016 with a focus on production ramp-up
  - Tantalum offtake to be finalized, lithium offtake for 2017 contracts to be negotiated at increasingly favourable lithium prices

- **SAL DE VIDA**
  - DFS revision by mid-2016
  - Formal DFS revision to be released which reflects the improved lithium market prices and Argentine macro policy changes
  - High quality Sal de Vida leadership team currently being assembled

- **MACRO**
  - Robust lithium demand
  - Favourable economics and accelerating demand growth for lithium
  - Significant tightening of supply side, both in lithium carbonate and concentrate feedstock, entering into period of significant price increase

- **CORPORATE**
  - Financial strength
  - Financial restructuring that has taken over 2 years is now complete, with the balance sheet strengthened, settlement of its outstanding convertible bonds and completion of a new 3-year debt financing
APPENDIX

Lithium Market and Galaxy Background
Lithium is the world’s lightest metal element with the highest electrochemical potential – lithium battery now a technology of choice

- Lithium is a small, soft silver-grey metal, the 3rd element in the periodic table
  - Highest specific heat capacity among solids
  - Highest electrochemical potential of all metals
  - Low atomic mass and low density

- Lithium can be mined as a hard rock mineral (pegmatite) or extracted from brine (salar)

- Preferred material for use in energy storage batteries compared to traditional lead acid or nickel based batteries
  - Superior energy density
  - Lighter, more compact and portable
  - More efficient
  - Longer life cycle
  - More environmentally friendly

- Lithium is an emerging “green mineral”
  - Production from brine is based on solar evaporation
  - High recyclability of lithium battery products
  - Key material for the booming energy storage industry

Hard rock lithium mineral

Lithium Demand By Application (2014)

Source: signumBOX estimates
Galaxy’s projects will also produce potash and tantalum – two commodities with positive demand mechanics and limited supply options

**POTASH**
- Sal de Vida is expected to produce 95ktpa potash for 40+ years
- Potash refers to a variety of potassium bearing minerals that are primarily used to produce fertiliser
  - Essential to the world’s food supply with no substitutes
  - South America is a growing fertiliser demand centre
- Demand for potash is driven by global population growth and the reduction in arable land
  - Increasing food demand requires higher yielding crops
  - Higher yielding crops require more fertiliser

**TANTALUM**
- Mt Cattlin will produce tantalum alongside spodumene from its reserves which have grades of 149ppm Ta₂O₅
- Tantalum is a rare, hard, dark grey metal
  - Very high natural corrosion resistance
  - Significant tantalum supply from Africa
- Tantalum is primarily used in the manufacture of capacitors for electronic equipment
  - High capacitance for a small amount of metal
  - Superior alloying qualities

**2014 Tantalum Ore Production (t)**

**Note:**
1 Excludes production of tantalum contained in tin slags
Growing demand is creating new opportunities for emerging lithium producers, with Galaxy at the forefront of the next wave of suppliers

2014:
Large companies invest heavily in lithium-ion batteries
- Taiwan’s Aleees, Sony and Siemens partner to develop a pure electric bus in September
- BMW launch second home charging station for electric and plug-in hybrid vehicles

2015:
Increasing demand creates new opportunities for growing lithium companies as current producers lack expansion capacity
- Albemarle (NYSE:ALB) after acquiring Rockwood, as yet to announce start of production at La Negra, already delayed for 2 years from when first announced under Rockwood Lithium
- FMC (NYSE:FMC) currently experiencing constrained production, reported revenue decline due to lowered third party supply
- Orocobre (ASX:ORE) encountering further delays in the ramp-up of production at the Olaroz Project

2016-2017:
Tesla’s Gigafactory expected to be operational
- Tesla set to generate 35GWh of lithium-ion battery production per year
- Other major manufacturing facilities also coming online

2020:
Multiple lithium-ion battery megafactories expected to be online
- LG Chem (7GWh), Foxconn (15GWh), BYD (20GWh) and Boston Power (10GWh) have all announced lithium-ion battery factories
- Combined with Tesla, the factories are expected to triple current lithium-ion battery production capacity by 2020

1. Benchmark Mineral Intelligence
The new Board and Management Team has successfully transformed the balance sheet, reducing net debt from over A$200m to A$20m

- Galaxy’s Chairman is a respected leader in the global mining industry and a co-founder of First Quantum (TSX: FM)
- New Managing Director appointed in 2013 successfully led Galaxy turnaround and restructuring
- Team brings strong financial acumen to Galaxy, with over an aggregate A$300m of debt restructuring, M&A and financing completed without external advisors
- Importantly, the current management and key employees have successfully developed lithium projects into production and have established customer relationships in key Asian markets

### Non-Executive Board members

**Martin Rowley** – Independent Non-Executive Chairman
- Co-founder and Executive Director of First Quantum
- First Quantum is among the largest copper production companies in the world with a market cap of C$4bn
- Non-Executive Chairman of Forsys Metal Corp (TSX: FSY)
- Previously Non-Executive Chairman of Lithium One Inc. (acquired by Galaxy in July 2012)

**Jian-Nan Zhang** – Non-Executive Director
- Deputy General Manager of Fengli Group, a subsidiary of a leading private Chinese industrial group

### Executive Board members

**Anthony Tse** – Managing Director
- 20+ years corporate experience in high growth industries, including technology, media and resources
- Extensive senior management experience in corporate strategy and development, M&A, capital markets
- Former Director Corporate Development at Hutchison Whampoa’s TOM Group (HKSE:2383), Deputy General Manager of TOM Online (NASDAQ:TOMO), President of CETV and CEO of CSN Corp.

**Charles Whitfield** – Executive Director
- Principal Investment Officer of Drumrock Capital
- Formerly Managing Director at Citigroup, Corporate Equity Solutions, and Deutsche Bank, Strategic Equity Transactions
Disclaimer

This document contains forward looking statements concerning the projects owned by Galaxy. Statements concerning mining reserves and resources may also be deemed to be forward looking statements in that they involve estimates based on specific assumptions. Forward-looking statements are not statements of historical fact and actual events and results may differ materially from those described in the forward looking statements as a result of a variety of risks, uncertainties and other factors. Forward-looking statements are inherently subject to business, economic, competitive, political and social uncertainties and contingencies. Many factors could cause the Company’s actual results to differ materially from those expressed or implied in any forward-looking information provided by the Company, or on behalf of, the Company. Such factors include, among other things, risks relating to additional funding requirements, metal prices, exploration, development and operating risks, competition, production risks, regulatory restrictions, including environmental regulation and liability and potential title disputes. Forward looking statements in this document are based on Galaxy’s beliefs, opinions and estimates of Galaxy as of the dates the forward looking statements are made, and no obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments. There can be no assurance that Galaxy’s plans for development of its mineral properties will proceed as currently expected. There can also be no assurance that Galaxy will be able to confirm the presence of additional mineral deposits, that any mineralization will prove to be economic or that a mine will successfully be developed on any of Galaxy’s mineral properties. Circumstances or management’s estimates or opinions could change. The reader is cautioned not to place undue reliance on forward-looking statements. Data and amounts shown in this document relating to capital costs, operating costs, potential or estimated cashflow and project timelines are internally generated best estimates only. All such information and data is currently under review as part of Galaxy’s ongoing operational, development and feasibility studies. Accordingly, Galaxy makes no representation as to the accuracy and/or completeness of the figures or data included in the document. Not For Release in US This presentation does not constitute an offer of securities for sale in any jurisdiction, including the United States. Any securities described in this presentation may not be offered or sold in the United States absent registration or an exemption from registration under the United States Securities Act of 1933, as amended, following the preparation of required documents and completion of required processes to permit such offer or sale.
