This disclosure summarizes information about the Wells Fargo Stable Return Fund G (the “Master Fund”) and the F, N, N15, N25, N35, N60, and AT unit classes, which invest in the Master Fund that prospective investors, including plan sponsors and plan participants, should know before investing. Investors should read and retain this disclosure for future reference.

**Key information**

The Stable Return Fund G and the F, N, N15, N25, N35, N60, and AT unit classes that invest in the Master Fund (collectively referred to as the “Fund”) are collective investment funds managed and trusteed by Wells Fargo Bank, N.A. (“Wells Fargo”) as advised by Galliard Capital Management, Inc. (“Galliard”), a wholly owned subsidiary of Wells Fargo and a registered investment advisor and fiduciary under ERISA Section 3(21).

**Objective.** The Fund seeks to provide investors with a moderate level of stable income without principal volatility. *There is no assurance that the Fund will achieve its objective.*

**Investors should consider this Fund if they are:**
- Looking to preserve principal
- Looking for stable income
- Seeking a long-term investment with low volatility

**Investors should not consider this Fund if they are:**
- Looking for FDIC insurance coverage or guaranteed rates of return
- Unwilling to accept that they may lose money on the investment
- Unwilling to accept the risks involved in the securities market

**Plan sponsors should consider not investing in the Fund if they are unwilling to abide by a 12-month written notice requirement for complete withdrawal.**

**Who may invest**

The Fund is offered exclusively to retirement plans qualified under §401(a) and tax-exempt under §501(a) of the Internal Revenue Code of 1986, as amended (the “Code”), excluding defined benefit plans other than those invested in the Fund as of January 15, 2006, and for which Wells Fargo serves as trustee or investment manager or in any other capacity authorized by law (each, a “Plan” and collectively, the “Plans”). No minimum amount is required for initial and subsequent purchases of Fund units.
Subject to the foregoing, the Fund is offered exclusively to:

(1) Employee pension, profit sharing or stock bonus plans\(^1\) which are qualified within the meaning of Code Section 401(a) and are therefore exempt from tax under Code Section 501(a), including an employee pension, profit sharing or stock bonus plan created or organized in Puerto Rico which is treated as qualified within the meaning of Code Section 401(a) and is exempt from tax under Code Section 501(a) pursuant to Section 1022(i) of the Employee Retirement Income Security Act of 1974, as amended (“ERISA”); (ii) which are administered under one or more documents which authorize part or all of the assets of the trust to be commingled for investment purposes with the assets of other such trusts in a collective investment trust and which adopt each such collective investment trust as a part of the plan; and (iii) with respect to which Wells Fargo is acting as trustee, co-trustee, custodian, investment manager, or agent for the trustee or trustees.

(2) Governmental plans or units described in Code Section 401(a)(24) or in Code Section 818(a)(6) which satisfy the requirements of Section 3(a)(2), or any other available exemption, of the Securities Act of 1933 and any applicable requirements of the Investment Company Act of 1940 and any eligible governmental plans which meet the requirements of Code Section 457(b) and are exempt under Code Section 457(g) and with respect to which the Bank is acting as trustee, co-trustee, custodian, investment manager, or agent.

(3) Trusts for the collective investment of assets of any investor otherwise described in this section 1.2(h) (including without limitation a Fund created under this Declaration of Trust) which qualify as a “group trust” under the Internal Revenue Service Ruling 81-100 or any successor ruling.

(4) Separate accounts maintained by an insurance company, the assets of which are derived solely from contributions made under plans qualified under section 401(a) and exempt under section 501(a) of the Code or a governmental plan or unit described in subparagraph (2) above.

(5) Custodial accounts that are treated as a trust under Code Section 401(f) or under Code Section 457(g)(3) and satisfy all of the other conditions set forth herein (each, a “Plan” and collectively, the “Plans”). No minimum amount is required for initial and subsequent purchases of Fund units.

(6) Plans qualified under Code Section 401(a) that are exempt under Code Section 501(a); funds from Code Section 401(a)(24) governmental retiree benefit plans that are not subject to Federal income taxation; funds from retirement income accounts under Code Section 403(b)(9); and funds from eligible governmental plan trusts or custodial accounts under Code Section 457(b) that are exempt under Code Section 457(g). The Trustee is also permitted, unless restricted in writing by a named fiduciary, to hold funds under this Trust that consist of assets of custodial accounts under Code Section 403(b)(7), provided that if assets of a custodial account under Section 403(b)(7) are invested in an Investment Fund under the terms of this Trust, all assets of such Investment Fund, including the Section 403(b)(7) custodial accounts, are solely permitted to be invested in stock of regulated investment companies. For this purpose a trust includes a custodial account that is treated as a trust under Code Section 401(f), 403(b)(7), 408(h), or 457(g)(3). No minimum amount is required for initial and subsequent purchases of Fund units.

**Fund investments**

Stable value is a fixed income asset class available exclusively to defined contribution retirement plans and government deferred compensation plans. Stable value funds typically invest in a variety of investment contracts, including traditional Guaranteed Investment Contracts (GICs), Security Backed Investment Contracts (also known as Synthetic GICs) and Separate Account GICs. The distinctive feature of these contracts is that they are designed to provide, under most circumstances (see Risk factors section), participants access to their funds at contract value (also called book value), which is equal to their principal balance plus any accrued interest. This contract feature is called “benefit responsiveness.” The contracts are designed to enable the assets of a stable value fund to be valued at their contract value rather than the market value of the securities backing the contracts. Separate Account GICs and Security Backed Investment Contracts earn an income yield which is determined by a crediting rate formula that reflects the earnings of the Contracts’ underlying fixed income securities with gains or losses “smoothed” over time through the crediting rate formula. This positive earnings profile has made stable value funds a popular choice for retirement plan investors who are looking for a conservative fixed income option with an objective of providing principal preservation and a competitive income yield. While it is the intent of the Fund’s management to provide the benefits of stable value investing through the Fund’s investment strategy including a competitive yield without principal fluctuations, THERE CAN BE NO ASSURANCE THAT THE FUND WILL MAINTAIN A COMPETITIVE YIELD OR STABLE PRINCIPAL VALUE UNDER ALL CIRCUMSTANCES. A description of the Fund’s primary investments follows:

\(^1\) As of the date of this disclosure no new participations by Puerto Rico Plans or Defined Benefit Plans are permissible.
Guaranteed investment contracts ("GICs"). The Fund may invest in GICs issued by credit worthy U.S. and Canadian insurance companies which, at the time of investment, meet credit guidelines established by the Trustee. GICs are obligations of insurance companies which generally provide fixed rates of interest over set periods of time. Some GICs can be structured to have either variable rates or variable maturities, or both. GICs are not insured by any federal agency. GICs may not be recognized as insurance policies in the event of the insolvency of the issuer and therefore the claims of GIC holders may remain unpaid until the claims of policy holders are paid. The instruments are generally not assignable or transferable without the consent of the issuers and have no publicly traded secondary market.

Security backed investment contracts ("SBICs"). Security Backed Investment Contracts are designed to provide principal preservation by providing for participant transactions at contract value. There are two key components in a Security Backed Investment Contract’s structure: 1) a portfolio of fixed income securities ("Underlying Assets") which are held and owned by the Fund on behalf of investors, and 2) investment contracts (also known as wrap contracts) designed to be benefit responsive, which enables participants to make withdrawals at contract value. The following is an overview of these two Security Backed Investment Contract components:

- **Fixed Income Securities.** The Underlying Assets for Security Backed Investment Contracts that the Fund may purchase include, but are not limited to U.S. Treasury securities; U.S. Agency securities; asset-backed securities; certificates of deposit; corporate securities; sovereign/supranational securities; mortgage-backed securities; municipal securities; derivative instruments; money market instruments; collective funds investing primarily in the permissible securities aforementioned above. All securities in the Fund are U.S. dollar denominated.

- **Investment contracts.** The Fund purchases investment contracts ("wrap contracts") which are designed to be benefit responsive from financial institutions such as banks and insurance companies. These wrap contracts are designed to allow for payments to participants to occur at contract value, regardless of the value of its Underlying Assets. The interest rate for a wrap contract is based initially on the yield of the Underlying Assets and then is reset periodically utilizing a crediting rate formula. Typically rates are reset quarterly, but may be reset more or less frequently. The basic function of the crediting rate formula is to amortize the realized or unrealized market value gain or loss in the Underlying Assets over a period of time defined by each contract. The wrap contract’s crediting rate generally tracks interest rates over time on a lagged basis. Wrap contracts are not assignable or transferable and, therefore, are considered illiquid investments. However, as noted above, the Underlying Assets backing the contracts are owned directly by the Fund and are marketable.

Separate account GICs. Separate Account GICs are issued by insurance companies and backed by Underlying Assets held in an account segregated from the insurance company’s general account assets. A Separate Account GIC is also designed to be benefit responsive, which enables participants to make withdrawals at contract value, although the assets are owned by the insurer. Like Security Backed Investment Contracts, the rates credited by Separate Account GICs are reset on a periodic basis.

Cash or cash equivalents. The Fund may hold a certain amount of its assets in cash or instruments which are generally considered to be a functional equivalent of cash in terms of the ability of the Fund to use those assets to provide a ready source of liquidity to respond to redemptions or other unforeseen circumstances.

Collective investment trusts. The Fund may also invest in other collective investment trusts with investment objectives that are consistent with the Fund’s investment strategy.

Investment strategy

The Fund will pursue its objective by actively managing a diversified portfolio of investment contracts, and the associated portfolio of Underlying Assets. All investment contract issuers and securities utilized by the Fund must be rated investment grade by one of the Nationally Recognized Statistical Rating Organizations at time of purchase. For liquidity purposes, the Fund attempts to maintain sufficient liquidity, as determined by the overall manager, by investing in cash and/or cash equivalents. In addition to Galliard, the Fund also utilizes other non-Wells Fargo affiliated investment sub-advisors to manage certain of the assets. As of the date of this disclosure sub-advisors used within the Fund include Jennison Associates LLC, Voya Investment Management Co., Prudential Investment Management Inc., New York Life Investment Management LLC, Pacific Investment Management Company (PIMCO), and Dodge & Cox. All are registered investment advisors and fiduciaries under ERISA Section 3(21). Galliard provides Wells Fargo assistance in selecting unaffiliated sub-advisers, monitoring sub-adviser portfolios, and ensuring all sub-advisers function within established Fund investment guidelines for diversification, quality and interest rate risk (duration). Each sub-adviser’s performance is measured versus its respective fixed income benchmark or investment objective. Through its sub-advisory agreement with Wells Fargo, and subject to
the approval of the Fund Trustee, Wells Fargo, Galliard may use its discretion to change the sub-advisers utilized by the Fund at any time.

**Portfolio diversification.** The Fund generally invests up to 95% of its assets in GICs, Separate Account GICs, and Security Backed Investment Contracts. The Fund will generally not invest more than 3% of its total assets in the GICs of a single issuer at the time of purchase. No single Security Backed Investment Contract issuer or Separate Account GIC Issuer may wrap more than 25% of the Fund’s total assets at the time of placement. It is intended that the Fund’s investment contracts will maintain a minimum weighted average credit quality rating of A. The overall average credit rating of the Underlying Assets in the Fund will be maintained at a minimum of AA-. To calculate the average credit quality, Galliard first calculates a composite rating for each security or contract issuer. If Moody’s, S&P and Fitch all provide a credit rating, the composite rating is the median of the three agency ratings. If only two agencies provide ratings, the composite rating is the more conservative rating. If only one agency provides a rating, the composite rating reflects that agency’s rating. To calculate the overall weighted average rating of the Fund, each composite rating is assigned a numeric value, and issuers or securities that do not have a rating are assigned the lowest quality numeric value on the scale. The numeric ratings of issuers are contract value weighted and the numeric value of Underlying Assets are market value weighted (and rounded to the nearest integer if necessary) to arrive at the weighted average quality for the Fund. The Fund’s Underlying Assets must have a credit rating of “investment grade” (not lower than Baa3 or BBB-) at the time of purchase and meet issuer diversification guidelines. Short-term money market funds may comprise between 5% and 50% of total Fund assets. The duration of the Fund is not to exceed 3.5 years.

**Liquidity management.** The Fund utilizes a “Liquidity Buffer” to manage participant activity within the Fund. In the context of the Fund, a Liquidity Buffer is an amount maintained in cash or cash equivalents with the goal of reducing the Fund’s overall duration and providing an adequate amount of readily available assets to fund projected participant withdrawals.

Participant redemptions are first funded from net contributions and other transfers to the Fund received on the day a disbursement is funded. If additional funds are necessary, funds may be drawn from the Fund’s Liquidity Buffer to fully fund any remaining amount. Only when this Liquidity Buffer is exhausted will the Fund’s assets be liquidated to fund withdrawals. The minimum amount of the Fund’s Liquidity Buffer is often governed by the Fund’s Investment Guidelines; however, the Fund generally maintains a liquidity buffer which is substantially in excess of this amount. Maintenance of a substantial Liquidity Buffer is an important safeguard to help assure that the Fund will not find itself in a position where it is necessary to draw upon the coverage provided by the Fund’s stable value contracts.

While the size of the Liquidity Buffer is an important protection for the Fund, the use of the Fund by separate account clients of Galliard as a source of their liquidity protection may tend, under certain circumstances, to magnify the liquidity needs of the Fund.

For this reason, the Liquidity Buffer of the Fund is set at a level which is believed to be adequate to meet the liquidity needs of all participants. There can be, however, no guarantee that the liquidity needs of all Fund participants will be met by the Liquidity Buffer. If the Liquidity Buffer were inadequate to fund participant withdrawals, the Fund would be compelled to add securities to create the necessary liquidity. Such sales could, depending on prevailing market conditions, cause a deviation between the Fund’s market value and contract value, and ultimately invoke the coverage of the Fund’s stable value contracts.

**Impact of the Fund’s ownership by participants of multiple plans.** A feature of the Fund, which tends to mitigate the risk that the Fund would need to invoke the coverage of its investment contracts, is the diversification of ownership interests in the Fund among the participants of many plans. Such diversification, for example, potentially lessens the possibility that a significant percentage of Fund assets would be withdrawn at the same time. For example, the Fund’s investment contracts generally allow for a certain percentage of the Fund’s assets to be withdrawn at contract value, even if those withdrawals would otherwise not be covered by the contract (this amount is known as a “Corridor”). As a result of the diversification of ownership interests in the Fund, the possibility that multiple plans would independently engage in employer initiated events which were adequate to overcome the capacity allowed by the Corridor to value assets at contract value is smaller than it would be for an account controlled by a single plan.

**Active management.** Certain of the Security Backed Investment Contracts and Separate Account GICs utilized within the Fund are back by Underlying Assets that are actively managed in varying investment styles. The Fund engages in active management of its Underlying Assets with a goal of improving diversification and enhancing performance of the Fund through use of fixed income management strategies including but not limited to sector allocation, yield curve analysis and issue selection. It is hoped that such strategies can positively affect the crediting rate of the Investment Contracts over time.
without adding materially to the volatility of the overall Fund. Portfolio turnover generally involves some expense to the Fund, including non-affiliated dealer mark-ups and other transaction costs on the sale of securities and the reinvestment in other securities.

Frequent trading will result in a higher-than-average portfolio turnover ratio and increased trading expenses. Securities brokers and dealers for the Fund’s portfolio transactions are selected on the basis of their ability to provide the best execution.

The Fund’s advisor, Galliard, manages most of the Underlying Assets within the Security Backed Investment Contracts and Separate Account GICs within the Fund directly.

Certain managers selected for the Fund advise fixed income collective funds trusted by Wells Fargo which fully incorporate the managers’ respective fixed income philosophy and investment approach. These fixed income collective funds are utilized by the Fund, in lieu of establishing separate portfolios.

**Annualized portfolio turnover.** The portfolio turnover rate is not a limiting factor when management deems portfolio changes appropriate. Changes may be made in the portfolios consistent with the investment objectives and policies of the portfolios whenever such changes are believed to be in the best interests of the portfolios and their interest holders. Portfolio turnover ratios for stable value funds are calculated at the underlying fixed income portfolio level. In the event to the Fund invests in traditional GICs or Short Term Investment Funds, portfolio turnover related to those components will not be included in the overall turnover ratio, consistent with Securities and Exchange Commission Form N-1A or N-3, as appropriate.

**Securities lending.** The Fund does not currently engage in securities lending activities.

**Risk factors**

The Fund is designed to allow participants to transact at contract value. There are a number of risks and events associated with investing in investment contracts and fixed income securities. These risks may adversely or positively affect future returns of the Fund. Important risk factors are addressed in this section.

**Cash flow risk.** This is the risk that the net effect of Fund contributions or withdrawals will have a negative impact on the Fund’s crediting rate, thereby decreasing the income which the fund generates for participants, or could ultimately result in the need to invoke the terms of the coverage provided by the Fund’s investment contracts (See “Investment contract risk” below). Also included in this risk is the notion that cash flows may be different than expected, making it more difficult to manage the investments in the Fund.

Stable value separate account portfolios may employ a strategy which incorporates the use of the Wells Fargo Stable Return Fund as a “liquidity buffer” for the separate account. In these situations, a separate account may hold a portion of its assets in the Fund for liquidity management. In these situations, the separate account may call on some or all of the assets so invested in the Fund to supply participants’ liquidity needs. This strategy could potentially have the effect of increasing the normal liquidity needed by the Fund. Galliard manages the Fund’s liquidity taking into consideration the potential liquidity needs specific to individual plans and separate account investors as a group. If a plan fiduciary should request that Galliard change its liquidity strategy in their stable value separate account by replacing the Wells Fargo Stable Return Fund investment in lieu of a money market fund, Galliard may require 12 months notice from such fiduciary before it can fulfill such a change in strategy.

**Counter-party risk.** When the Fund enters into an agreement, such as an agreement to purchase or sell securities, the Fund is exposed to the risk that the other party will not fulfill its obligation.

**Crediting rate risk.** The Fund’s yield is the aggregate of all of the investment contracts’ individual crediting rates plus the yield on the cash portion of the Fund's portfolio. The basic function of the formula used to determine a Security Backed Investment Contract’s or a Separate Account GIC’s crediting rate is to amortize the market value gain or loss of the Underlying Assets over the duration of the portfolio. In circumstances where the Fund’s market value is less than the Fund’s contract value, the crediting rate will decrease in order to amortize the difference. In these circumstances, the Fund's yield may be reduced, crediting less than the income earned by the Underlying Assets.

An investment contract’s crediting rate provides a fixed return for a period of time until the next rate reset. Typically, these rates are reset quarterly but may be reset more or less frequently. The use of the crediting rate formula and periodic reset schedule allow the contract’s return to generally track market rates over time on a lagged basis. So, for example, in an environment where interest rates are rising, the Fund’s crediting rate may be lower than prevailing interest rates. The crediting rate formula’s components include the Underlying Assets’ yield, duration, and market value, in addition to the contract value. The management of these key variables can affect the volatility of the contract’s overall crediting rate.
Debt securities and credit risk. Debt securities, such as notes and bonds, are subject to credit risk and interest rate risk. Credit risk is the possibility that an issuer or credit support provider of an instrument will be unable to make interest payments or repay principal when due. Changes in the financial strength of an issuer or credit support provider or changes in the credit rating of a security may affect its value. Interest rate risk is the risk that market interest rates may increase, which tends to reduce the resale value of certain debt securities, including U.S. Government obligations. Debt securities with longer durations are generally more sensitive to interest rate changes than those with shorter durations. Changes in market interest rates do not affect the rate payable on an existing debt security, unless the instrument has adjustable or variable rate features, which can reduce its exposure to interest rate risk. Changes in market interest rates may also extend or shorten the duration of certain types of instruments, such as asset-backed securities, thereby affecting their value and returns. Debt securities may also have, or become subject to, liquidity constraints.

Derivative risk. The term “derivatives” covers a broad range of investments, including futures, options, and swap agreements. In general, a derivative refers to any financial instrument whose value is derived, at least in part, from the price of another security or a specified index, asset, or rate. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. The use of derivatives can lead to losses because of adverse movements in the price or value of the underlying asset, index, or rate, which may be magnified by certain features of the derivatives. These risks are heightened when the portfolio manager uses derivatives to enhance a Fund’s return or as a substitute for a position or security, rather than solely to hedge (or offset) the risk of a position or security held by the Fund. The success of management’s derivatives strategies will also be affected by its ability to assess and predict the impact of market or economic developments on the underlying asset, index, or rate and the derivative itself, without the benefit of observing the performance of the derivative under all possible market conditions. Certain derivative positions may be difficult to close out when a Fund’s portfolio manager may believe it would be appropriate to do so. Certain derivative positions (e.g., over-the-counter swaps) are subject to counterparty risk.

Transactions in futures contracts involve certain risks and transactions costs. Risks include imperfect correlation between the price of the futures contracts and the price of the underlying securities, the possible absence of a liquid secondary market for any particular instrument, the counterparty or guaranteeing agent defaulting, and trading restrictions imposed by futures exchanges due to price volatility. Futures contracts involve the posting of margin deposits, and movement in the underlying securities may result in calls for additional payments of cash. The need to make such additional payments could require the Fund to liquidate securities at a disadvantageous time.

The Fund, including any of its underlying funds, and Wells Fargo are not required to register as commodity pool operators and will not purchase futures contracts for speculation.

Diplomatic risk. The risk that an adverse change in the diplomatic relations between countries might reduce the value or liquidity of investments in either country.

Foreign investment risk. Foreign investments are subject to additional risks, including potentially less liquidity and greater price volatility. These additional risks also include those related to adverse political, regulatory, market or economic developments, and foreign markets can and often do perform differently from U.S. markets. Moreover, individual foreign economies may differ favorably or unfavorably from the U.S. economy in such respects as growth of Gross Domestic Product, rate of inflation, capital reinvestment, resource self-sufficiency, and balance of payment positions. Additionally, foreign companies may be subject to significantly higher levels of taxation than U.S. companies, including potentially confiscatory levels of taxation, thereby reducing their earnings potential.

Fund-of-Funds risk. To the extent of its investment in other funds, each Fund bears the risks of those funds. There is no assurance that those underlying funds will achieve their objectives.

Inflation-protected debt securities risk. Inflation-protected debt securities are structured to provide protection against the negative effects of inflation. Inflation is a general rise in the prices of goods and services which can erode an investor’s purchasing power. Unlike traditional debt securities whose return is based on the payment of interest on a fixed principal amount, the principal value of inflation-protected debt securities is periodically adjusted according to the rate of inflation and as a result, interest payments will vary. For example, if the index measuring the rate of inflation falls, the principal value of an inflation-protected debt security will fall and the amount of interest payable on such security will consequently be reduced. Conversely, if the index measuring the rate of inflation rises, the principal value on such securities will rise and the amount of interest payable will also increase. The value of inflation-protected debt securities is expected to change in response to changes in real interest rates. Generally, the value of an inflation-protected debt security will fall when real interest rates rise and inversely, rise when real interest rates fall.
**Information risk.** The risk that information about a security is unavailable, incomplete, or inaccurate.

**Interest rate risk.** Interest rate risk is the risk that the market value of the Underlying Assets will fluctuate as interest rates go up and down. For example, when interest rates go up, the market value of bonds will go down.

**Investment contract risk.** The Fund purchases investment contracts from financial institutions. These contracts are designed to enable the Fund to utilize contract value, rather than the market value of the Underlying Assets, when determining the Fund’s value for participant transactions, pursuant to standards of practice issued by the Financial Accounting Standards Board. While these contracts normally allow for contract valuation, there can be no assurance this valuation can be maintained in the risk that the contract issuer will default on its obligation under the contract, or that another event of default may occur under the contract rendering it invalid; that the contract will be terminated before a replacement contract with favorable terms can be secured.

In addition, the contracts may contain terms which reflect circumstances in which the Underlying Assets may be excluded, in whole or in part, from contract value treatment. If these Underlying Assets were not provided contract value treatment, they must be marked to market and could impact the ability to realize the full principal value of the investment in the Fund. While the specific terms of the Fund’s various investment contracts may differ among the contract issuers, here are a few examples of circumstances where contract value treatment may not be provided to specific underlying assets:

- Credit defaults and other impairments of Underlying Assets are generally excluded from the investment contracts’ coverage, subject to certain allowances and/or cure periods. The contracts are not intended to guarantee the credit quality or provide default protection for the Underlying Assets. Acting within the investment guidelines applicable to the Fund, the Fund relies on the credit analysis of its investment adviser or sub-advisers to avoid buying securities which may become impaired. Notwithstanding this, however, there can be no guarantee that Underlying Assets held by the Fund will not become impaired. The impairment of any of these Underlying Assets could cause the specific assets to be excluded from the investment contract’s coverage, which could cause a loss of principal value in The Fund.

- Certain employer events are also excluded from the investment contracts’ coverage. For example, the contracts recognize certain “employer initiated events or communications,” substantially increase the likelihood of large redemptions from the Fund. Thus, such employer initiated events may significantly increase the risk that a contract issuer be required to make a payment. Therefore, most investment contracts limit the contract value coverage provided for Fund withdrawals arising as a result of an employer initiated event. This limitation could cause a loss of principal in the Fund. Examples of employer initiated events include: advising Fund participants to redeem their Fund holdings, significant restructurings of operations, or large scale layoffs.

Finally, each contract recognizes certain “Events of Default” which can invalidate contracts’ coverage. Among these are investments outside of the range of instruments which are permitted under the investment guidelines contained in the investment contract, fraudulent or other material misrepresentations made to the investment contract provider, changes of control of the investment adviser not approved by the contract issuer, changes in key regulatory requirements, or failure of the trust to be tax qualified.

While the Fund’s investment advisor endeavors to minimize the likelihood of any loss of contract value coverage from such events, THERE CAN BE NO ASSURANCE THAT SUCH A LOSS OF CONTRACT VALUE COVERAGE WILL NOT OCCUR, WHICH COULD RESULT IN A LOSS OF PRINCIPAL VALUE OF YOUR INVESTMENT.

**Issuer risk.** The value of a security may decline for a number of reasons that directly relate to the issuer such as management performance, financial leverage, and reduced demand for the issuer’s goods, services, or securities.

**Liquidity risk.** This risk generally relates to the degree to which an investment can be easily sold or converted into cash.

In a fixed income context, it is the risk that a security cannot be sold at the time desired, or cannot be sold without adversely affecting the price. The securities in some foreign companies may be less easy to buy and sell (that is, less liquid) and their prices may be more volatile than securities of comparable U.S. companies. In addition, the differing securities market structures and various potential administrative difficulties, such as delays in clearing and settling portfolio transactions or in receiving payment of dividends, may reduce liquidity and adversely affect the value of some securities. In a stable value context, it is the risk relating to participants’ ability to access funds without market value risk or other penalty. At the portfolio level, it means the ability to meet cash flow demands without having to sell investments at distressed prices. Liquidity risk is increased in an institutional context, such as a stable value fund, which must anticipate...
the withdrawal needs of institutional clients that may react to market or other needs in ways which may be difficult to anticipate. The Fund is structured to provide adequate liquidity for normal withdrawal needs. However, the Fund should be considered a long-term investment for participants to accumulate retirement assets.

Management risk. This is the risk that the investment techniques and risk analyses used by the Fund’s portfolio managers will not produce the desired results, which may lead to unanticipated losses or underperformance.

Market risk. The market price of securities owned by a Fund may go up or down, sometimes rapidly or unpredictably. Securities may decline in value or become illiquid due to factors affecting securities markets generally or particular industries represented in the securities markets, such as labor shortages or increased production costs and competitive conditions within an industry. A security may decline in value or become illiquid due to general market conditions which are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest rates or currency rates, or adverse investor sentiment generally. During a general downturn in the securities markets, multiple asset classes may decline in value or become illiquid simultaneously.

Mortgage- and asset-backed securities risk. Mortgage and asset-backed securities represent interests in “pools” of mortgages or other assets, including consumer loans or receivables held in trust. In addition, mortgage dollar rolls are transactions in which a Fund sells mortgage-backed securities to a dealer and simultaneously agrees to purchase similar securities in the future at a predetermined price. Mortgage- and asset-backed securities, including mortgage dollar roll transactions, are subject to certain additional risks. Rising interest rates tend to extend the duration of these securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, these securities may exhibit additional volatility. This is known as extension risk. In addition, these securities are subject to prepayment risk, which is the risk that when interest rates decline or are low but are expected to rise, borrowers may pay off their debts sooner than expected. This can reduce the returns of a Fund because the Fund will have to reinvest that money at the lower prevailing interest rates. This is also known as reinvestment risk. These securities also are subject to risk of default on the underlying mortgage or assets, particularly during periods of economic downturn.

Multi-style management risk. Because certain portions of the Fund’s assets are managed by different portfolio managers using different styles, the Fund could experience overlapping security transactions. Certain portfolio managers may be purchasing securities at the same time other portfolio managers may be selling those same securities. This may lead to higher transaction expenses.

Political risk. The risk that political actions, events or instability may be unfavorable for investments made in a particular nation’s or region’s industry, government or markets.

Prepayment risk. Prepayment risk is the risk that the issuers of the bonds owned by a fund will prepay them at a time when interest rates have declined. Because interest rates have declined, the fund may have to reinvest the proceeds in bonds with lower interest rates, which can reduce the fund’s return.

Regulatory risk. Changes in government regulations may adversely affect the value of a security.

Sector emphasis risk. Investing a substantial portion of a Fund’s assets in related industries or sectors may have greater risks because companies in these sectors may share common characteristics and may react similarly to market developments.

Stripped securities risk. Stripped securities are the separate income or principal components of debt securities. These securities are particularly sensitive to changes in interest rates, and therefore subject to greater fluctuations in price than typical interest bearing debt securities. For example, stripped mortgage-backed securities have greater interest rate risk than mortgage-backed securities with like maturities, and stripped treasury securities have greater interest rate risk than traditional government securities with identical credit ratings.

U.S. government obligations risk. U.S. Government obligations include securities issued by the U.S. Treasury, U.S. Government agencies, or government sponsored entities. While U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. Government, securities issued by U.S. Government agencies or government-sponsored entities may not be backed by the full faith and credit of the U.S. Government. The Government National Mortgage Association (GNMA), a wholly owned U.S. Government corporation, is authorized to guarantee, with the full faith and credit of the U.S. Government, the timely payment of principal and interest on securities issued by institutions approved by GNMA and backed by pools of mortgages insured by the Federal Housing Administration or the Department of Veterans Affairs. Government-sponsored entities (whose obligations are not backed by the full faith and credit of the U.S. Government) include the Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (FHLMC). Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA but are not backed by the full faith and credit of the U.S.
Government. FHLMC guarantees the timely payment of interest principal, but its participation certificates are not backed by the full faith and credit of the U.S. Government. If a government-sponsored entity is unable to meet its obligations or its creditworthiness declines, the performance of a Fund that holds securities issued or guaranteed by the entity will be adversely impacted. U.S. Government obligations are subject to low but varying degrees of credit risk, and are still subject to interest rate and market risk.

**Yield curve risk.** Yield curve risk refers to the exposure that a security or portfolio may have in the event of changes in the yield differences required by investors between short and long term debt instruments, (i.e. the yield curve) that will affect the return of an investment either positively or negatively.

**Fees and expenses**

**Trustee fee.** Wells Fargo does not charge a trustee fee to the G, F, or AT classes. Wells Fargo does charge a trustee fee to the N, N15, N25, N35, and N60 classes. As indicated below, Wells Fargo receives these fees from the Fund. Wells Fargo will provide prior notice when their trustee fee increases. Wells Fargo performs the following trustee services for the Fund:

- Administration
- Investment management
- Investment monitoring
- Regulatory compliance, reporting, and legal support
- Fund disclosures and communications
- Product enhancement and support
- Service provider selection and oversight

**Advisory expense.** Wells Fargo has retained Galliard, a wholly-owned subsidiary of Wells Fargo, and will compensate Galliard an investment advisory fee for services provided to the Fund. This arrangement does not increase the fees paid by the Plans.

**Fund administrative expense.** Wells Fargo will charge the Fund for the following services performed by both affiliated and unaffiliated providers:

- **Audit expense.** Wells Fargo will pay to KPMG, a certified public accountant, a fee for the performance of audit services, as required by applicable law.

- **Form 5500 preparation expense.** Wells Fargo will pay to Ernst & Young, a certified public accountant, a fee for the preparation of Form 5500.

- **Custody expense.** Wells Fargo provides custody services for the Fund but does not charge a fee for this service.

- **Fund accounting expense.** Galliard provides fund accounting services to the Fund but does not charge a fee for this service.

- **Transfer agency expense.** Wells Fargo and Galliard provide trade aggregation and processing for the Fund but neither charges a fee for this service.

- **Other expenses.** Wells Fargo may also incur and pay on behalf of the Fund other third party expenses, including legal, licensing, technology support, and other administrative expenses, excluding costs incurred in establishing and organizing the Funds.

**Investment contract fees.** The Fund will pay investment contract fees for the Security Backed Investment Contracts and Separate Account GICs that are described in the Fund Investment section above. Investment contracts are selected on the basis of issuer credit quality, ability to meet contract bid specifications and cost.

**Underlying Fund expenses.** The Underlying Funds may charge investment management and trustee fees to the Funds. The Underlying Funds will also incur operating expenses, including fund accounting, audit, and other administrative expenses. These Underlying Fund Expenses will be in addition to the fees and expenses charged by Wells Fargo to the Funds.

The amounts associated with these expenses are provided in the Annual Fund Expense Table. The Underlying Funds pay expenses for trading costs which are not included in these operating expenses but are reflected in the net asset values of the Underlying Funds.

**Plan operations expense.** An authorized Plan Fiduciary has instructed Wells Fargo to deduct a fee from the Fund for Plan record-keeping, consultant, and/or participant education expenses performed by contracted service provider(s) chosen by the Plan.

**AdviceTrack® (AT class) program fee.** The AdviceTrack investment program is a managed retirement solution that provides participants with professional investment advice, based on a personalized investment strategy. Wells Fargo has retained Morningstar Associates, LLC, as an independent financial expert to provide investment advice for the AdviceTrack program. Morningstar receives 0.13% for their investment advice and Wells Fargo receives 0.50% as program manager.

**Annual Fund expense table**

The following table shows the total annual operating expenses that are deducted directly from the Fund and reduces the rate of return. The expenses are accrued on a daily basis. The cumulative effect of fees and expenses will reduce the growth of your retirement savings. Fees and expenses are only one of many factors to consider when you decide to invest in this Fund. You may also want to think about whether an investment in this Fund, along with your other investments, will help you achieve your financial goals.
Unit classes. Wells Fargo has created various unit classes of certain CITs with differing imbedded fees. Imbedded fees are accrued in the Net Asset Value (NAV) of the unit class on a daily basis. The summary below provides an explanation of the primary use of and the fees associated with the different unit classes.

- The G unit class or Master Fund is not available to Wells Fargo clients for direct investment.
- The F unit class is primarily used when Wells Fargo exercises investment discretion or acts in a 3(21) or 3(38) fiduciary capacity. The unit class includes fund investment advisory and administrative expenses.
- The N unit classes are primarily used when Wells Fargo exercises no investment discretion for the account and includes fund investment advisory, administrative, trustee and, when applicable, plan operations expenses.
- The AT unit class is exclusively used in the AdviceTrack program. Only select Wells Fargo CITs have the AdviceTrack program option.

Valuation of units

Valuation of units. An investment by a Plan in the Fund results in the issuance of a given number of participation interests (“Units”) in the Fund for that Plan’s account. Wells Fargo determines the purchase price and redemption price of Units (the “Unit Value”) at the close of each day Wells Fargo is open for business or any time Wells Fargo deems appropriate in its discretion (a “Valuation Date”). Generally, the Fund’s Unit Value equals the total value of each asset held by the Fund, less any liabilities, divided by the total number of Units outstanding on the Valuation Date.

Suspension of trading. Under certain circumstances, Wells Fargo may in its discretion choose temporarily not to execute requests to purchase or redeem Units of the Fund. Such circumstances include restriction or suspension of trading on the exchanges where the Fund’s portfolio securities are traded and such other unusual circumstances as would, in the judgment of Wells Fargo, make disposal of the Fund’s investments not reasonably practicable. This may result in a delay in the valuation date as of which the execution of redemptions or purchases occur.

Purchases and redemptions of units

Direction of investments. The Plans are administered generally by a representative of the Plan Sponsor (“Plan Administrator”) or an administrative committee (the “Committee”) appointed by the sponsoring company’s board of directors as set forth in the Plan documents. Only authorized persons, which may include the Plan Administrator, the Committee, a Plan participant, discretionary trustee, or an investment manager, can direct the purchase or redemption of Units.

Purchases of units in the Fund. Wells Fargo, as trustee of the Fund, receives contributions to the Fund and invests them in accordance with the proper investment directions from an authorized party. In certain cases, at Wells Fargo’s discretion, in-kind contributions will be accepted to purchase Units if Wells Fargo determines that such a transaction will not result in adverse transfer or other costs to the Fund.

All investments in the Fund are subject to a determination by Wells Fargo that the investment instructions are complete. Wells Fargo reserves the right at its discretion to (i) suspend the availability of Units and (ii) reject requests for purchase of Units when, in the judgment of Wells Fargo, such suspension or rejection is in the best interest of the Fund. Certificates for Fund Units will not be issued.

</table>

The numbers above are as of 3/31/2015.

1 Administrative expenses consist primarily of investment contract fees.
2 Administrative expenses calculate to less than 0.000% of the Fund’s total market value.
**Reinvestment of income.** The Fund reinvests all of its income (including realized capital gains, if any).

Such income will not be paid out as dividends or other distributions. Income earned on assets in the Fund is reinvested and included in the Fund’s daily Net Asset Value ("NAV").

**Trading cutoff times.** Requests to purchase or redeem Units of the Fund must be received by the Plan Administrators before 4:00 p.m. (ET) on a Valuation Date. If the markets close early, trading for the Fund may close early, and requests to purchase or redeem Units of the Fund must be received before such earlier time. Requests received in proper form before these times are processed at that day’s NAV. Requests received after these times are processed at the next business day’s NAV. Some Plans may have earlier cutoff times due to administrative requirements.

**Redemption of units.** The Plan Administrator, Committee, participant, or other authorized party may instruct Wells Fargo in writing to redeem some or all Units. Units will be redeemed at the Unit Value pursuant to the trade cutoff times described above. Redemption proceeds will generally be paid to the account within one business day after receipt of the redemption request, and in all cases within six business days after such receipt. See exceptions in the Withdrawal limitations section.

Redemptions are subject to determination by Wells Fargo that the investment instructions, distribution requests and other distribution documents, if any, are complete.

Subject to applicable legal and regulatory restrictions, Wells Fargo may impose reasonable notice requirements at its discretion, and may suspend redemption privileges or postpone the date of payment of redemption proceeds indefinitely.

When Wells Fargo has actual knowledge that a Plan is not legally permitted to invest in or to continue to invest in the Fund, such Plan’s interest in the Fund will be immediately redeemed. Wells Fargo may make such redemptions at its sole discretion.

Units in the Fund are not transferable.

Although Wells Fargo does not anticipate the need to make in-kind distributions of portfolio securities, Wells Fargo may, under extraordinary circumstances and at its discretion, make such distributions in lieu of or in addition to cash distributions.

**Withdrawal limitation — Participants.** Qualified Plan participant initiated withdrawals are honored at any time without penalty, regardless of their frequency or amount unless payments are being delayed to all Fund unit holders. The Fund also requires participants to invest in a “non-competing fund” for at least 90 days before transferring to a “competing” fund option. Examples of “competing” fund options include a money market fund, a high quality bond fund with a duration of three years or less, other principal preservation funds, or a brokerage window. The Plan administrator for each Plan will establish a Plan’s requirements.

**Withdrawal limitation — Plan sponsors.** Any Plan sponsor or Plan fiduciary-initiated withdrawal from the Fund will require a 12-month written notice of the intent to withdraw assets from the Fund. At the discretion of Wells Fargo, the notification periods identified for withdrawals may be waived only under extenuating circumstances as determined by the Trustee in its sole discretion.

Redemptions or exchanges of Fund shares may be delayed or suspended for up to 12 months, or even longer if Wells Fargo obtains an exemptive order or other appropriate relief from the Comptroller of the Currency.

**Plan change communication.** Plan changes or corporate events resulting in a material impact to a Plan’s investment in the Fund should be communicated to Galliard, or applicable service provider, for each Plan as soon as possible. Such communication facilitates the Fund’s advisor in its role of managing the Fund and meeting the requirements of the Fund’s investment contract issuers.

**Scope of responsibility and limitation of liability**

Wells Fargo and its agents will not be liable with respect to any direction received from a Plan Administrator, Committee, participant, or other authorized party and has no duty to inquire as to whether any such direction is made in accordance with the provisions of the applicable Plan. Wells Fargo and the agents of the Fund will not incur any personal liability for any act or obligation of, or claim against, the Fund, and all persons dealing with the Fund, in any way, must look only to the assets of the Fund for payment of any obligation of the Fund.

Wells Fargo recommends that each employer or Plan Administrator consult with an attorney, accountant, or other appropriate professional advisor(s) regarding the advisability of adopting a Plan and/or investing in the Fund.

**Float.** Although not a frequent occurrence, Wells Fargo receives compensation ("float") from the use of uninvested funds. Float on funds received too late in the day (such as proceeds from trade settlements or earnings) to be invested that same day or received without sufficient information to invest them properly begins to accrue on the date the funds are received and ends on the date the amounts are deposited to the Fund, which is generally the next business day if Wells Fargo has complete information relating to the investment of such deposit. Float may continue to accrue if Wells Fargo has insufficient information regarding the deposit to invest them properly in the Fund.
Earnings on the float depends on numerous factors that affect short-term yields, such as current interest rates, Federal Funds rates, credit risk, and the duration of the particular debt instrument. Short term yields are typically similar to the Federal Funds Effective Rate, which is shown in the Federal Reserve’s Publication H.15 and available on the Federal Reserve’s website. Uninvested funds are not segregated from other deposit funds, so attributing an exact earnings or interest factor applicable to the Fund is not possible. Wells Fargo may also incur certain costs related to uninvested funds, such as the cost of FDIC insurance and any collateralization requirements on certain uninvested funds. Under certain circumstances, Wells Fargo may estimate the float earned and credit that estimated amount back to the Fund. For funds in the Wells Fargo deposit products, Wells Fargo could be considered to earn indirect compensation by using the deposits as part of its lending base from which interest bearing loans are issued, all as part of standard bank operations.

**Gifts.** Wells Fargo has a policy regarding receipt of gifts, which would constitute compensation under the 408(b)(2) regulation. In general, Wells Fargo employees cannot accept cash or cash equivalent gifts. Gifts valued over $200 ($300 to various events) must be approved in advance. Gifts based on family or similar relationships or discounts generally available in similar contexts are not included. Any gifts given to Wells Fargo or its employees would be direct compensation. Wells Fargo does not expect the value of gifts it or its employees receive as a service provider to this plan to exceed $250.

**Soft dollar.** Wells Fargo, an affiliate, or a non-affiliated advisor may receive research paid for by “soft dollar” credits from executing broker/dealers on securities transactions as permitted in Section 28(e) of the Securities and Exchange Act of 1934. Not all research generated may be useful to each account for which a particular transaction was made. In exchange for those research services, an account may pay somewhat higher commissions for the securities transactions than commissions obtainable on a non-soft dollar basis. In instances where a service includes both a research component and a non-research component, the non-research portion will be paid in “hard dollars” by Wells Fargo. The types of products, research, or services Wells Fargo obtains with “soft dollars” includes various quotation services with real time, options, and exchange pricing; information on various indices; information on current versus historical equity spreads, risk/return analysis, analytical reports, financial statements, charting graphics, and screening of fundamental, economic, and political data. Wells Fargo determines in good faith that the commissions are reasonable in relation to the value of the brokerage and research provided.

**Regulatory oversight**

**Office of the Comptroller of the Currency.** Office of the comptroller of the currency. Wells Fargo, as a national bank, is subject to the regulations of the Office of the Comptroller of the Currency (“OCC”). These regulations help ensure that banks meet their fiduciary obligations to their customers. Investments in the Fund, however, are not bank deposits, are not insured by the FDIC or any other agency of the U.S. Government, and may lose value.

**ERISA.** The Employee Retirement Income Security Act of 1974, as amended (“ERISA”), places certain investment restrictions on the Fund. ERISA provides that fiduciaries, including Wells Fargo and Galliard, are subject to certain fiduciary obligations in addition to any obligations imposed by instruments establishing the Fund. Wells Fargo and Galliard do provide services as a Fiduciary. Galliard is also an investment advisor registered under the Investment Advisers Act of 1940.

**Federal income tax.** The Fund is intended to be a group trust qualified under Section 401(a) of the Code, and exempt from Federal income tax under Section 501(a) of the Code. The Fund is expected to remain exempt from federal income taxation so long as it is operated in accordance with its terms as they may be amended from time to time to conform with rules and regulations adopted by the Internal Revenue Service.

**Annual reports.** Each year, Wells Fargo makes available annual reports on the Fund to employers and Plan Administrators. The annual reports contain audited financial statements and other information on the Fund not contained in this document. The Fund’s annual year-end is December 31. A copy of the most recent annual report can be viewed online at [www.wellsfargo.com/advantagefunds](http://www.wellsfargo.com/advantagefunds), keyword “collective.” Employers and Plan Administrators can access the web site or may obtain a copy of the annual report by contacting their Relationship Manager.

**Copies of the disclosure.** Employers and Plan Administrators may obtain additional copies of this disclosure by contacting their Relationship Manager. Participants should contact their employer or Plan Administrator.
