Article 110 Requirements for Electrical Installations

110.3(B) Installation and Use of Equipment

110.9 Interrupting Rating

110.12(B) Integrity of Electrical Equipment and Connections

110.14(C) Temperature Limitations (terminations and devices)

110.28* Space About Electrical Equipment

Article 210 Branch Circuits

210.8(A)* GFCI Protection for Personnel (Dwelling Units)

210.8(B)* GFCI Protection for Personnel (other than Dwelling Units)

210.11 Branch Circuits Required

210.12* Arc-Fault Circuit Protection (AFCI)

210.20 Overcurrent Protection

Article 215 Feeders

215.3 Overcurrent Protection

215.10 Ground-Fault Protection of Equipment

Article 220 Branch Circuit, Feeder and Service Calculations

220.10 Branch Circuit Load Calculations

Article 225 Outside Branch Circuits and Feeders

225.30 Number of Supplies

Article 230 Services

230.40 Number of Service Entrance Conductor Sets

230.71 Maximum Number of Disconnects

230.90(A) Overcurrent Protection (Ungrounded Conductor)

230.95 Ground-Fault Protection of Equipment

Article 240 Overcurrent Protection

240.4 Protection of Conductors

240.6 Standard Ampere Ratings

240.15(B) Circuit Breaker as Overcurrent Device (Tap Rules)

240.21 Location in Circuit

240.83 Markings (Circuit Breakers)

240.86 Series Ratings

240.87* Arc Energy Reduction

Article 250 Grounding

250.24(C) Grounded Conductor Brought to Service Equipment

250.30 Grounding Separately Derived AC Systems

250.32 Buildings or Structures Supplied by a Feeder(s) or Branch Circuit(s)

250.50 Grounding Electrode System

250.66 Size of AC Grounding Electrode Conductor

250.122 Size of Equipment Grounding Conductors

Article 285 Surge-Protective Devices (SPDs)

285.6 Short Circuit Current Rating

285.21 Connection

Article 310 Conductors for General Wiring

310.10(H) Conductors in Parallel

310.15 Ampacities of Conductors

Article 368 Busways

368.10 Uses Permitted

368.56 Branches from Busways

Article 408 Switchboards and Panelboards

408.36 Overcurrent Protection (Panelboards)

408.41 Grounded Conductor Terminations

408.54 Maximum Number of Overcurrent Devices

Schneider Electric®
Article 409 Industrial Control Panels

409.21 Overcurrent Protection (for each incoming Supply Circuit)

409.30 Disconnecting Means

409.104 Wiring Space

409.108 Service Equipment

409.110 Markings (Short Circuit Current Rating)

Article 430 Motors, Motor Circuits and Controllers

430.6 Ampacity and Motor Rating Determination

430.52 Motor Branch Circuit Short Circuit Protection

430.109 Type of Disconnecting Means

430.120 Adjustable Speed Drives

430.122 Conductor Size and Ampacity for Drive

430.126 Motor Overtemperature Protection

430.128 Disconnecting Means for Drive

430.250 Full-Load Current – Three Phase Motors

Article 450 Transformers

450.3 Overcurrent Protection

Article 517 Health Care Facilities

517.20 Wet Procedure Locations

Article 525 Carnivals, Circuses, Fairs and Similar Events

525.23 GFCI Protection

Article 590 Temporary Installations

590.6 Ground-Fault Protection for Personnel

625 Electric Vehicle Charging System

625.14 Rating

625.44* EV Supply Equipment Connection

Article 680 Swimming Pools, Fountains and Similar Installations

680.22 GFCI – Pool Pumps and Receptacles

680.32 GFCI – Storable Pools

680.44 GFCI – Spas and Hot Tubs

680.51(A) GFCI – Fountains

680.62(A) GFCI – Therapeutic Tubs

680.71 GFCI – Hydromassage Bathtubs

Article 690 Solar Photovoltaic Systems

690.15* Disconnection of PV Equipment

Article 695 Fire Pumps

695.3(A)(1) Electric Utility Service Connection

Article 700 Emergency Systems

700.5 Transfer Equipment

700.5(C) Automatic Transfer Switches

700.10(B)(5) Wiring from Emergency Source

700.26 Ground-Fault Protection of Equipment

700.27 Coordination

Article 702 Optional Standby Systems

702.4 Capacity and Rating

702.12* Outdoor Generator Sets

QO and Homeline Combination Arc-Fault Circuit Breakers

TIME SAVER Diagnostics

Simply turn off the circuit breaker, hold down the Push-To-Test button, and then turn the circuit breaker back on. It’s that simple!
