COLORADO’S STORMWATER PROGRAM
FACT SHEET

TYPES OF COLORADO INDUSTRIAL STORMWATER GENERAL PERMITS

- **Light Industry** General Permit (Permit No. COR-010000)
- **Heavy Industry** General Permit (Permit No. COR-020000)
- **Construction** General Permit (Permit No. COR-030000)
- **Metal Mining** General Permit (Permit No. COR-040000)
- **Sand and Gravel** General Permit (Permit No. COR-340000)
- **Coal Mining** General Permit (Permit No. COG-850000)
- **Recycling Industry** General Permit (Permit No. COR-060000)

APPLICATION DEADLINES

- Application for all permit types except construction: 30 days prior to anticipated date of discharge
- Application for construction permit: 10 days prior to the start of construction

CONTACTS

ACRONYMS AND ABBREVIATIONS

- **BMPs** Best Management Practices – physical, structural, and/or managerial practices that, when used singly or in combination, prevent or reduce pollution of stormwater
- **CDPHE** Colorado Department of Public Health and Environment
- **CDPS** Colorado Discharge Permit System (Colorado's version of the NPDES program)
- **CFR** Code of Federal Regulations
- **CRS** Colorado Revised Statutes
- **CWA** Federal Clean Water Act
- **Division, WQCD** Water Quality Control Division, which is under the CDPHE.
- **DMR** Discharge Monitoring Report - report form required for those permittees who have to sample
- **EPA** Environmental Protection Agency
- **MS4** Municipal Separate Storm Sewer System
- **NOI** Notice of Intent (EPA's form to apply for coverage under their general permits. In Colorado, the term "application" is used instead.)
- **NPDES** National Pollutant Discharge Elimination System (Section 402 of the CWA)
- **Regulation 61** Colorado Discharge Permit System Regulations – includes stormwater regulations
- **SIC Code** Standard Industrial Classification Code; a four-digit number used to identify industry types
- **SWMP** Stormwater Management Plan – required under Colorado’s industrial stormwater permits
(similar to EPA’s Storm Water Pollution Prevention Plan, or SWPPP)
COLORADO’S STORMWATER PROGRAM

On November 16, 1990, EPA issued a final regulation on the control of stormwater from municipal and industrial stormwater discharges. The stormwater program is under the NPDES (National Pollutant Discharge Elimination System) part of the Clean Water Act. The regulation is meant to reduce the amount of pollutants entering streams, lakes and rivers as a result of runoff from residential, commercial and industrial areas. The regulation (40 CFR 122.26) covers specific types of industries, and storm sewer systems for municipalities with more than 100,000 population.

In Colorado, the program is under the Colorado Department of Public Health & Environment, Water Quality Control Division. (The Colorado program is referred to as the Colorado Discharge Permit System, or CDPS, instead of NPDES.)

THE STORMWATER PROGRAM - PHASE I

The program began operating under Phase I of the regulations. Colorado’s regulation for Phase II was finalized in March 2001. A summary of the Phase II regulation begins on page 3.

1. MUNICIPALITIES - PHASE I

Under Colorado’s program, Denver, Aurora, Lakewood, Colorado Springs, and CDOT are covered by Phase I of the municipal permitting process. (Municipalities less than 100,000 population and meeting certain other criteria have been brought in under Phase II of the program.)

Municipalities in Phase I had a two-step application process. Part I required an inventory of all their outfalls. It also included a substantial amount of monitoring, and gathering information about existing programs that control stormwater quality.

In Part II of the municipal application, the cities developed a Stormwater Management Program. In general, this included controls on cross-connections and illicit discharges to the storm sewer system, developing policy on such things as street sweeping, roadway deicing, erosion control during construction, etc., and establishing a long-term monitoring program. It also involved developing educational programs, such as one to raise the awareness level of residents about where their used oil or antifreeze goes if they dump it in the storm drain.

2. INDUSTRIES - PHASE I

Industrial facilities which discharge industrial stormwater either directly to surface waters or indirectly, through municipal separate storm sewers, must be covered by a permit. The industries covered by the program include most manufacturers, mining, transportation facilities, power plants, landfills, auto recyclers, and construction projects that disturb five or more acres of land. (See Appendix A for a complete list of covered industries.)

A. Definition of Terms

- Municipal separate storm sewer system, or MS4, means a conveyance or system of conveyances (including roads with drainage system, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):
  1) owned or operated by a State, city, town, county, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or a designated and approved management agency under section 208 of the Clean Water Act that discharges to state waters;
  2) designed or used for collecting or conveying stormwater;
  3) which is not a combined sewer; and
  4) which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2 and 5 CCR 1002-20, Sec. 4.3.7.X(3-91).
- **Stormwater discharge associated with industrial activity:** The Stormwater regulations require that stormwater discharges associated with industrial activity be covered under the permit program. This refers to any point source which is used for collecting and conveying stormwater and which is located at an industrial plant or directly related to manufacturing, processing or raw materials storage areas at an industrial plant. The term includes, but is not limited to, stormwater discharges from: industrial plant yards; immediate access roads and rail lines; material handling sites; refuse sites; sites used for the application or disposal of process waters; sites used for storage and maintenance of material handling equipment; sites that are or have been used for residual treatment, storage or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and finished products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to stormwater. (See 40 CFR 122.26 for a more complete definition.)

B. **Permit Requirements**

The industrial permit requirements include prohibitions against discharges of non-stormwater. They require dischargers to control and eliminate the sources of pollutants in stormwater through the development and implementation of a Stormwater Management Plan (SWMP). The plan must include Best Management Practices (BMPs), which may include treatment of stormwater discharges along with source reduction. Additional requirements are semi-annual inspections, Annual Reports, discharge monitoring reports (in some cases), and annual fees.

**Stormwater Management Plan (SWMP)** - Development and implementation of a Stormwater Management Plan is one of the main permit requirements. One of the most important features is Best Management Practices, or BMPs. These can encompass a wide range of options, both structural and non-structural. Inclusion of BMPs allows most of the permits to avoid numeric effluent limits.

The purpose of a SWMP is to identify possible pollutant sources to stormwater and to set out BMPs that, when implemented, will reduce or eliminate any possible water quality impacts. A SWMP must be developed for each facility covered by the stormwater program. The plan shall identify potential sources of pollution which may reasonably be expected to affect the quality of stormwater discharges associated with industrial activity from the facility. In addition, the plan shall describe and ensure the implementation of practices which are to be used to reduce the pollutants in stormwater discharges associated with industrial activity at the facility and to assure compliance with the terms and conditions of this permit.

D. **Violations/Penalties**

Dischargers of stormwater associated with industrial activity, as defined in the EPA Stormwater Regulation (40 CFR 122.26(b)(14), which do not obtain coverage under the appropriate Colorado general permit, or under an individual CDPS permit regulating industrial stormwater, will be in violation of the Federal Clean Water Act and the Colorado Water Quality Control Act, 25-8-101. For facilities covered under a CDPS permit, failure to comply with any CDPS permit requirement constitutes a violation. Civil penalties for violations of the Act or CDPS permit requirements may be up to $10,000 per day. Criminal pollution of state waters is punishable by fines of up to $25,000 per day.

**THE STORMWATER PROGRAM - PHASE II**

The Water Quality Control Division (“the Division”) amended its regulation to reflect the new federal requirements. The amended state regulation became effective March 2, 2001.

The Phase II regulation contains several important new provisions, as outlined below:
1. **CONSTRUCTION**

   A. The minimum size of construction projects needing permits was reduced from five acres of disturbed area, to just one acre. These requirement went into effect on July 1, 2002.

   B. There is provision for the waiver of a permit for small (under five acres) construction sites, if the rainfall erosivity factor is less than 5 (usually short-term projects in dry areas).

   More details on the various options under this section, such as a description of the waiver, and a discussion on Qualifying Local Programs, are in the Division’s guidance document entitled “Stormwater Fact Sheet – Construction.” It is available at [www.cdphe.state.co.us/wq/PermitsUnit](http://www.cdphe.state.co.us/wq/PermitsUnit), or by calling 303-692-3517.

2. **INDUSTRIAL**

   A. **“No Exposure” Waiver**

   The regulations allow all industrial categories except construction to opt out of permit coverage if they did not have any industrial materials or activities exposed to stormwater. The “no exposure” waiver includes a requirement for certification of ‘no exposure,’ which is good for five years, and must then be renewed. The waiver form is available on the Division’s website.

3. **MUNICIPAL**

   A. Small municipalities (<100,000) in urbanized areas, including special districts, have been brought into the municipal part of the program, but with simpler application and permit requirements than for the large municipalities. Some municipalities are required to have permit coverage, while others must be evaluated by the Division to determine whether permit coverage is needed. The list of municipalities currently under an MS4 general permit is in Appendix C. Below are the categories of municipalities which may be brought under the regulation at a future date.

   1) **State must evaluate** for permit coverage:

   If the municipality has a population from 10,000-50,000, is outside of an urbanized area, and has a population density of at least 1000/square mile.

   Designation Criteria:
   - discharge to sensitive waters
   - high growth or growth potential
   - size of population and population density
   - contiguity to an urbanized area
   - significant contributor of pollutants to State waters
   - adequacy of existing stormwater quality control programs

   2) **State can evaluate** for permit coverage:

   Any municipality under 10,000 population, with less than 1000 population/square mile, and outside an urbanized area.

   The definition of an MS4 which requires coverage can also include “Non-standard MS4s,” which are publicly owned storm sewer systems at military bases, schools, hospital or prison complexes, and highways and other thoroughfares, if they are within an urbanized area. It does not include systems in very discrete areas, such as individual buildings.
B. Municipal Permit Requirements

The Division has issued three municipal general permits: one for MS4s within the Cherry Creek Reservoir Basin, one for other MS4s state-wide, and one specifically for Non-standard MS4s. The permits include the six minimum controls as outlined in the regulation:

1) Public education and outreach on stormwater impacts
2) Public involvement/participation
3) Illicit connections and discharge detection and elimination
4) Construction site stormwater runoff control
5) Post-construction stormwater management in development/redevelopment
6) Pollution prevention/good housekeeping for municipal operations

See Appendix B for a more detailed description of each measure.

4. GUIDANCE/MORE INFORMATION

For further information, visit the Division’s website at www.cdphe.state.co.us/wq/PermitsUnit. You may also contact the Stormwater Program staff at (303) 692-3517, or Greg Davis, EPA, at (303) 312-6314. Questions can also be sent via email to the Division at cdphe.wqstorm@state.co.us. The complete text of the federal regulation and related documents, such as fact sheets on various aspects of the regulation and a menu of BMPs, are available on EPA’s website at http://cfpub.epa.gov/npdes/home.cfm?program_id=6.

Colorado’s regulation is available online at www.cdphe.state.co.us/regulations/wqccregs/index.html - look for the section called Point Source Discharge Permit & Control Regulations – Reg 61. Also, Colorado’s Phase II Municipal Guidance, a Construction Fact Sheet, the R-Factor Waiver application, and the industrial No Exposure certification form, are all available at www.cdphe.state.co.us/wq/PermitsUnit.
APPENDIX A

INDUSTRIES REQUIRED TO OBTAIN STORMWATER DISCHARGE PERMITS

The **Standard Industrial Classification (SIC) Code** or codes for the facility usually determines permit coverage. SIC Codes are assigned according to the primary activities performed by a company. They are often assigned for insurance purposes or when a business registers as a corporation. Industries can also determine their SIC Code by checking with their trade association, Chamber of Commerce, legal counsel, or library for the SIC Manual.

The industries are listed here by their SIC Code. The manufacturing industries are generally represented by SIC Codes 20-39. (A two digit code, such as 42, means that all industries under that heading, from 4200 to 4299, are covered.) Use this table to determine which of the Division's general permits is appropriate for your facility.

**Notes:**

(a) For this SIC Code, a stormwater permit is required only if runoff contacts overburden, raw material, intermediate or finished product, or waste products.

(b) For most facilities covered by the stormwater regulations, SIC codes are used to indicate the **primary** function of the facility. This footnote denotes industries which, in most cases, are covered under the stormwater regulations regardless of what other activities are conducted at the site (contact Division for details).

(c) This SIC Code only refers to the **operation** of oil and gas facilities (exploration, production, processing, or treatment operations, or transmission facilities). Construction activities at oil and gas facilities (e.g., construction of well pads, roads, pipelines, etc.) are covered under the Construction general permit.

(d) For facilities under this SIC Code, as per the Colorado Discharge Permit System Regulations, Section 61.4(3)(b)(i)(C), the operator of an existing or new discharge composed entirely of stormwater from an oil or gas exploration, production, processing, or treatment operation, or transmission facility is not required to submit a permit application unless the facility has had a discharge of a reportable quantity, or contributes to a violation of a water quality standard:

(e) Facilities at sand and gravel operations may be covered under the Sand and Gravel general permit; facilities at construction sites may be covered under the Construction general permit; other facilities, including mobile plants, may be covered under the Light Industry general permit.

(f) In this SIC Code, only facilities with vehicle maintenance (including fueling), equipment cleaning, or airport deicing need a stormwater permit.

(g) Airports that use 1000 gallons of deicer(s) or more annually, and that have annual fuel sales of one million gal/year or more, are covered under the Heavy Industry general permit. Airports that do not meet these criteria need the Light Industry general permit.

**Permit types:**

- **L:** **Light Industry** General Permit ( Permit No. COR-010000)
- **H:** **Heavy Industry** General Permit ( Permit No. COR-020000)
- **N:** **Construction** General Permit ( Permit No. COR-030000)
- **M:** **Metal Mining** General Permit ( Permit No. COR-040000)
- **C:** **Coal Mining** General Permit ( Permit No. COG-850000)
- **S:** **Sand and Gravel** General Permit ( Permit No. COR-340000)
- **R:** **Recycling Industry** General Permit ( Permit No. COR-060000)
APPENDIX B

Municipal Permits - Six Minimum Measures

1. **Public Education and Outreach on Stormwater Impacts.** Permittees must implement a public education program to distribute educational materials to the public and business communities (or conduct equivalent outreach activities) about the impacts of stormwater discharges on waterbodies and the steps that the public and businesses can take to reduce stormwater pollution.

2. **Public Involvement/Participation.** This program will require that the public play an active role in the development and implementation of the municipality's stormwater management program. At a minimum, permittees must comply with state and local public notice requirements when implementing their stormwater management programs. The means of public notice should be effective, i.e., should attempt to reach a majority of citizens, through the use of a community publication or newspaper of general circulation.

3. **Illicit Discharge Detection and Elimination.** Permittees will be required to develop and implement a program to detect and eliminate illicit discharges to the MS4. The owner or operator will also be required to develop (if not already completed) a storm sewer system map (or equivalent) showing the location of all outfalls, and all State waters that receive discharges from the MS4. To ensure the effectiveness of this measure, the owner or operator would be required to effectively prohibit, through ordinance, order, or similar means, illicit discharges into the MS4, and implement appropriate enforcement procedures and actions as needed. This measure would also require the owner or operator to develop and implement a plan to detect and address illicit discharges (including illegal dumping) to the system. The plan will require the following components: procedures for tracing the source of an illicit discharge; procedures for removing the source of the discharge, and procedures for locating priority areas likely to have illicit discharges.

4. **Construction Site Stormwater Runoff Control.** Permittees will be required to develop, implement, and enforce a pollutant control program to reduce pollutants in stormwater runoff to their MS4 from construction activities that result in land disturbance of one or more acres. The program will need to include, at a minimum, requirements for construction site owners or operators to implement appropriate erosion and sediment control BMPs, such as silt fences, temporary detention ponds and hay bales, and to control other waste such as discarded building materials; procedures for site plan review; procedures for receipt and consideration of information provided by the public; procedures for inspections during construction; and penalties to ensure compliance.

5. **Post-Construction Stormwater Management in New Development and Redevelopment.** Permittees will be required to develop, implement, and enforce a program to address the quality of stormwater discharges to their MS4 from new development and redevelopment projects that result in land disturbance of one or more acres. This will involve ordinances or the equivalent, and requiring site-appropriate and cost-effective structural and non-structural BMPs, as appropriate.

6. **Pollution Prevention/Good Housekeeping for Municipal Operations.** Permittees will be required to develop and implement an operation and maintenance/training program with the ultimate goal of preventing or reducing pollutant runoff from municipal operations. These include facilities such as streets, roads, highways, municipal parking lots, maintenance and storage yards, fleet or maintenance shops with outdoor storage areas, salt/sand storage locations and snow disposal areas operated by the permittee, and waste transfer stations, and activities such as park and open space maintenance, fleet and building maintenance, street maintenance, new construction of municipal facilities, and stormwater system maintenance, as applicable.

APPENDIX D

REFERENCES/GUIDANCE
(updated 2/08)

A. Division Documents

- **Water Quality Control Division – Stormwater Permitting**
  Available at: [www.cdphe.state.co.us/wq/PermitsUnit/stormwater](http://www.cdphe.state.co.us/wq/PermitsUnit/stormwater)
  Includes all stormwater general permits, applications, SWMP guides, reporting forms, and:
  - **General:**
    - Stormwater Fact Sheet
    - Stormwater Permit Fees
  - **Construction:**
    - Construction Fact Sheet
    - Oil and Gas Industry Construction Fact Sheet
    - R-Factor Waiver
  - **Industrial:**
    - No Exposure Certification
    - Stormwater Sampling Guidance Document
  - **Municipal (MS4):**
    - Colorado Phase II Stormwater Municipal Guide
    - Non-Standard MS4s Municipal Guide Fact Sheet
    - Qualifying Local Programs Guidance
    - Municipally Owned Industry Q&A

B. EPA Documents

- **EPA Stormwater Phase II**
  A very useful web page with a lot of information and good FAQs. Includes many fact sheets covering the Small MS4 Program, the Construction Program, and the Industrial “No Exposure” Waiver. Available on the net at [http://cfpub1.epa.gov/npdes/pubs.cfm?program_id=6](http://cfpub1.epa.gov/npdes/pubs.cfm?program_id=6)
  - EPA’s Stormwater Phase II Compliance Assistance Guide, March 2000

  Database of monitoring results showing effectiveness of structural and non-structural BMPs. Data contributions are being solicited on an on-going basis. Available as CD-ROM, or on the web at [http://www.bmpdatabase.org](http://www.bmpdatabase.org)
  - Call Jane Clary or Jonathan Kelly at Wright Water Engineers, Inc., (303) 480-1700, or email at clary@wrightwater.com for a copy of the CD-ROM and user’s guide (free).

- **Stormwater Management for Industrial Activities: Developing Pollution Prevention Plans and Best Management Practices** (EPA-832-R-92-006, 9/92); and
  **Developing Your Stormwater Pollution Prevention Plan: A Guide for Construction Sites**
C. Local and Other Documents, Courses

• **Urban Drainage and Flood Control District (UDFCD) Drainage Criteria Manual (Vol. 3)**
  This is a stormwater BMP manual developed for the Denver metro area. Includes regional, residential, industrial, commercial, and construction BMPs. This manual is a highly respected across the country and a great resource for professionally accepted design criteria for construction BMPs. Available free from the “download” section of the Urban Drainage and Flood Control District web page: www.udfcd.org

• **Center for Watershed Protection**
  The Center provides objective and scientifically sound information on effective techniques to protect and restore urban watersheds. Workshops, journals, publications and links are available.
  ♦ 8391 Main Street, Ellicott City, MD 21043-4605, Phone: (410) 461-8323
  ♦ http://www.cwp.org

• **Rocky Mountain Education Center** (Located at Red Rocks Community College, Lakewood)
  Contact the Rocky Mountain Education Center at (800) 933-8394.
  Schedule of classes available online at: http://www.rrcc.edu/rmeccetc.html

  • **Stormwater Management and Erosion Control Course**
    One-day course, with an optional additional half-day in the field, on the principles and practices of erosion and sediment control. Recommended for municipal erosion control inspectors and those practicing erosion control in the field. This course is required for the CDOT certified erosion control supervisor certification. Course is given at Red Rocks Community College in Lakewood. Course CETC #150.

  • **Stormwater Compliance Inspector Course**
    Two-day course (including half-day in the field) on preparing for and conducting a comprehensive construction site inspection. Recommended for municipal erosion control inspectors, construction site managers, and those practicing erosion control in the field. Prerequisite: Stormwater Management and Erosion Control Course (see above). Course is given at Red Rocks Community College in Lakewood. Course CETC #151.
