• For the sanitization and disinfection of hard, non-porous surfaces.
• To inhibit the growth of algae, bacteria, mold and mildew on hard, non-porous surfaces.
• For the control of odor causing bacteria and fungi in water damage restoration situations.
• For use in hospitals and healthcare facilities.
• For use in commercial, agricultural, post harvest, and horticultural water treatment applications.
• For the treatment of water for industrial and commercial water treatment systems.

FOR COMMERCIAL USE ONLY

ACTIVE INGREDIENT:
Hydrogen Peroxide: 23.0%
PEROXACETIC ACID: 5.3%
INERT INGREDIENTS: 71.7%
TOTAL: 100%

DANGER – PELIGRO
STRONG OXIDIZING AGENT
KEEP OUT OF REACH OF CHILDREN
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand this label, find someone to explain it to you in detail.)

FIRST AID:
If in eyes
• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

If on skin or clothing
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

If swallowed
• Call poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by the poison control center.
• Do not give anything by mouth to an unconscious person.

If inhaled
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, give them artificial respiration, preferably mouth-to-mouth if possible.
• Call poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-222-1222 for emergency medical treatment information.

NOTE TO PHYSICIAN:
Probable mucosal damage may contraindicate the use of gastric lavage.

SaniDate 5.0 concentrate should not be combined or mixed with any other pesticide concentrates.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS –
DANGER: Corrosive. Causes irreversible eye damage and skin burns. May be fatal if inhaled or absorbed through skin. Harmful if swallowed. Do not breathe vapors or spray mist. Do not get in eyes, on skin, or on clothing. Wear goggles, face shield, and rubber gloves when handling. Do not enter an enclosed area without proper respiratory protection. Wash thoroughly with soap and water after handling and before eating, drinking, using tobacco or using the toilet. Remove contaminated clothing and wash before reuse.

PHYSICAL AND CHEMICAL HAZARDS:
Corrosive. Strong oxidizing agent. Do not mix with water. In concentrated form. Mix only with water in accordance with label instructions. Never bring concentrate in contact with other pesticides, cleaners or oxidative agents.

DIRECTIONS FOR USE:
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the state or tribal agency responsible for pesticide regulation.

SaniDate 5.0 works best when diluted with water containing minimal levels of organic or inorganic materials, and with water having a neutral pH. Thoroughly rinse out tank with water before mixing concentrate. This product will readily mix with clean, neutral water and does not require agitation.

SaniDate 5.0 concentrate should not be combined or mixed with any other pesticide concentrates.

(For review editor: For labels that list medical premises and metal and/or stainless steel surfaces, one of the following statements must be used.)
This product is not to be used as a terminal sterilant/high level disinfectant on any surface or instrument that (1) is introduced directly into the human body, either into or in contact with the bloodstream or normally sterile areas of the body, or (2) contacts intact mucous membranes but which does not ordinarily penetrate the blood barrier or otherwise enter normally sterile areas of the body. This product may be used to pre-clean or decontaminate critical or semi-critical medical devices prior to sterilization or high-level disinfection.

This product is not for use on Medical device surfaces.

The main areas of use include:
• Dairies, wineries, breweries, and beverage plants
• Packinghouses, food processing, food distribution and storage, beverage processing facilities, milking parlors, dairy production and transfer facilities and equipment
• Farms, farm equipment and harvesting equipment
• Meat and meat products processing, packing, and rendering plants
• Milk and dairy processing/packing plants
• Egg processing/packing plants
• Seafood and poultry processing/packing plants
• Fruit and vegetable processing/packing plants
• Grocery stores, supermarkets, food distribution and storage facilities
• Eating establishments
• Hospitals, doctor’s offices, dental offices, housekeeping services, physical therapy departments, nursing services, autopsy facilities, nursing homes, other healthcare facilities
• Animal hospitals, laboratories, and housing facilities
• Veterinary clinics, kennels, kennel runs, cages, feeding and watering equipment, pet shops, zoos, pet animal quarters, poultry premises, trucks, hatcheries, and livestock quarters and pens
MOLD AND MILDEW CONTROL

SaniDate 5.0 may be used to effectively inhibit the growth of mold and mildew and odors caused by them at a rate of 0.5 fl. oz. in 1 gallon of water in general commercial environments such as:

- Schools, colleges, industrial facilities, dietary areas, office buildings, recreational facilities, health clubs, gyms, spas, retail and wholesale establishments
- Buses, taxis, trucks, trains, airplanes, public transportation facilities
- Hair salons/barber shops

SaniDate 5.0 effectively inhibits the growth of mold and mildew and odors caused by them when applied to hard non-porous surfaces (non food contact surfaces), such as floors, walkways, walls, tables, chairs, benches, countertops, cabinets, bathroom fixtures, sinks, shelves, racks, crates, utility carts, trailers, vehicles, conveyors, refrigerators (exterior), fan blades, drains, piping, commercial, municipal, and process water transfer and handling systems, filter housings, vats, tanks, pumps, valves and systems.

MOLD AND MILDEW CONTROL ON HARD, NON-POROUS SURFACES

Use a rate of 0.5 fl. oz. per gallon for hard, non-porous surfaces, (non food contact surfaces), that are lightly soiled or have been pre-rinsed to remove gross contamination. For heavily soiled hard non-porous surfaces, a pre-cleaning step is required. Apply solution with mop, cloth, sponge, brush, scrubber, or coarse spray device or by soaking so as to wet all surfaces thoroughly. Allow surface to remain wet for 10 minutes then remove solution and entrapped soil with a clean wet mop, cloth, or wet vacuum pickup. Prepare a fresh solution daily or when it becomes soiled or diluted. Repeat treatment every seven days, or more often if new growth appears.

REMEDIAN AND RESTORATION SITES

SaniDate 5.0 is recommended for use on hard, non-porous, environmental surfaces such as walls and other hard, nonporous surfaces such as floors, walls, tables, chairs, countertops, garbage bins/cans, bathroom fixtures, sinks, bed frames, shelves, racks, carts, refrigerators (exterior), glazed tile, and use sites listed on this label made of linoleum, vinyl, glazed porcelain, plastic polyethylene, stainless steel, or glass.

Preventative Treatment

To inhibit surface mold and mildew growth on hard, non-porous surfaces in new or renovated building construction, mix SaniDate 5.0 at a rate of 0.5 fl. oz. in 1 gallon of water and apply evenly by paintbrush, airless sprayer, low pressure hand wand, or backpack sprayer. Assure uniform coverage of surfaces to be protected. Surfaces should be evenly wet without runoff or pooling. Allow surfaces to stay wet with solution for ten (10) minutes. Permit treated surfaces to be thoroughly dry before painting or affixing overlayment materials such as siding, wallboard or flooring. Repeat the application of this product as necessary if mold growth appears, following directions provided below for remedial treatment. Normally, infrequent application will provide effective control. If regrowth occurs, investigate to determine the causes and correct the problem prior to reapplication of SaniDate 5.0. Mold may recur in conditions of persistently high humidity, standing water, or hidden water leaks.

Remedial Treatment (Not for use in California)

SaniDate 5.0 must be used as part of a comprehensive mold remediation or water damage restoration program, including:

- Periodic monitoring and inspection of conditions favorable to mold growth such as moisture ingress and high relative humidity
- Effective repairs as necessary to eliminate conditions favorable to mold growth
- Drying of affected areas to below 20% moisture content

Mix SaniDate 5.0 at a rate of 0.5 fl. oz. in 1 gallon of water and apply evenly by paintbrush, airless sprayer, low-pressure hand wand, or backpack sprayer. Assure uniform coverage of surfaces to be protected. Surfaces should be evenly wet without runoff or pooling. Allow surfaces to stay wet with solution for ten (10) minutes. Permit treated surfaces to be thoroughly dry before painting or affixing overlayment materials such as siding, wallboard or flooring.

The following associations and Internet sites should be consulted for information on standards and guidelines for remedial treatment of mold and mildew:

- IAQA-Indoor Air Quality Association (www.iaqa.org)
- EPA-Environmental Protection Agency (www.epa.gov)
- IICRC-Institute of Inspection, Cleaning and Restoration Certification (http://www.iicrc.org/)

Small Areas-Total Surface Area Affected Less Than 10 Square Feet Clean-up Methods*

Prior to applying SaniDate 5.0, clean the affected area using one of the following or another preferred professional method.

Method 1: Wet vacuum (in the case of porous materials, some mold spores/fragments will remain in the material but will not grow if the material is completely dried).

Method 2: Damp-wipe surfaces with plain water or use a wood floor cleaner; scrub as needed.

Method 3: High-efficiency particulate air (HEPA) vacuum after the material has been thoroughly dried.

Dispose of the contents of the HEPA vacuum in well-sealed plastic bags.

*Minimum personal protective equipment to be worn during clean up includes gloves, N-95 respirator and goggles/eye protection.

Other Construction Materials

Concrete or Cinder Block

Method 1: Wet vacuum (in the case of porous materials, some mold spores/fragments will remain in the material but will not grow if the material is completely dried).

Method 2: High-efficiency air (HEPA) vacuum after the material has been thoroughly dried.

Dispose of the contents of the HEPA vacuum in well-sealed plastic bags.

Special procedures and training are required for remediation of moldy areas larger than 10 square feet. Consult guidelines for remediation of large areas established by the Indoor Air Quality Association (www.iaqa.org) and the US Environmental Protection Agency (www.epa.gov). An excellent reference is the New York City Department of Health publication, “Guidelines on Assessment and Remediation of Fungi in Indoor Environments.” An excellent guide for professional mold remediation is available from the Institute of Inspection, Cleaning And Restoration Certification (IICRC). Standard SS20 is based upon reliable remediation and restoration techniques, and combines academic principles with practical elements of water damage restoration. Where structural members and/or contents have been exposed to water in excess of 24 hours, there is a possibility of extensive microbial growth that may be hidden. In such a case a complete assessment and remediation plan must be prepared that provides for user and occupant safety and documentation and monitoring of the remediation process. IICRC SS20 contains excellent guidance for such a plan. In the context of such a plan, SaniDate 5.0 can be used on materials to be removed and disposed of and in other applications where mold inhibition is indicated. The Standard must be followed exactly and all growth and contaminated organic material removed prior to using SaniDate 5.0. Before using SaniDate 5.0 in mitigation of large projects, you should be knowledgeable of these guidelines and follow their recommendations. In the absence of access to the guidance and standards identified, the user should refer to the following information taken from the U.S. EPA’s guide: Mold Remediation in Schools and Commercial Buildings (March 2001). These guidelines are based on the area and type of material affected by water damage and/or mold growth. Please note that these are guidelines; some professionals may prefer other cleaning methods. Use the appropriate remediation steps prior to application of SaniDate 5.0.
Medium-Total Surface Area Affected Between 10 and 100 Square Feet Cleanup Methods*
Method 1: Wet vacuum (in the case of porous materials, some mold spores/fragments will remain in the material but will not grow if the material is completely dried).
Method 2: Damp-wipe surfaces with plain water or with wood floor cleaner; scrub as needed.
Method 3: High-efficiency particulate (HEPA) vacuum after the material has been thoroughly dried.
Dispose of the contents of the HEPA vacuum in well-sealed plastic bags.

Other Construction Materials Concrete or cinder block
Method 1: Wet vacuum (in the case of porous materials, some mold spores/fragments will remain in the material but will not grow if the material is completely dried).
Method 2: High-efficiency particulate (HEPA) vacuum after the material has been thoroughly dried.
Dispose of the contents of the HEPA vacuum in well-sealed plastic bags.

*Limited or Full personal protective equipment is recommended during cleanup. Limited personal protective equipment includes gloves, N-95 respirator or half-face respirator with HEPA filter, disposable overall, goggles/eye protection. Full personal protective equipment includes gloves, disposable full body clothing, headgear, foot coverings, full-face respirator with HEPA filter.

Use professional judgment, consider potential for remediation exposure and size of contaminated area.

Large-Total Surface Area Affected Greater Than 100 Square Feet or Potential for Increased Occupant or Remediator Exposure During Remediation Estimated to be Significant Cleanup Methods*
Method 1: Wet vacuum (in the case of porous materials, some mold spores/fragments will remain in the material but will not grow if the material is completely dried).
Method 2: High-efficiency particulate (HEPA) vacuum after the material has been thoroughly dried.
Dispose of the contents of the HEPA vacuum in well-sealed plastic bags.

Method 4: Discard/remove water-damaged materials and seal in plastic bags while inside of containment, if present. Dispose of as normal waste. HEPA vacuum area after it is dried.

Other Construction Materials Concrete or cinder block Cleanup Methods*
Method 1: Wet vacuum (in the case of porous materials, some mold spores/fragments will remain in the material but will not grow if the material is completely dried).
Method 2: High-efficiency particulate (HEPA) vacuum after the material has been thoroughly dried. Dispose of the contents of the HEPA vacuum in well-sealed plastic bags.

*SaniDate 5.0 is an effective sanitizer for hard, non-porous personal equipment such as boots, gloves, hard hats, rain gear, tools and equipment including but not exclusive to buckets, pails, scrapers, squeezeegees, brooms, mops, shovels, rakes, hooks, wrenches, and screwdrivers.

1. Prior to use of this product, remove gross contamination with a cleaner or other suitable detergent and rinse with potable water.
2. Add 1.6 fl. oz. SaniDate 5.0 to 5 gallons of potable water. Soak items in with diluted solution using mop/wipe, coarse spray or flood techniques.
3. Allow contact for at least (1) one minute.
4. Allow items and/or surfaces to air dry. No potable water rinse is required.

Fogging Instructions: SaniDate 5.0 can be used as an adjunct to acceptable manual cleaning and sanitizing to treat hard, non-porous room surfaces.

1. Prior to fogging, remove or carefully protect all food product and packaging materials.
2. Prior to use of this product, remove gross contamination with a cleaner or other suitable detergent and rinse with potable water.
3. Ensure room is properly ventilated. Vacate all personnel from the room during fogging and for a minimum of 1 hour after fogging, to ensure that there is no strong odor, which is characteristic of acetic acid, before having personnel return to work area.
4. Fog desired areas using 1 quart per 1,000 feet of room area with a solution of 1.6 fl. oz. SaniDate 5.0 to 5 gallons of potable water.
5. Allow surfaces to drain thoroughly before operations are resumed.

TRACTOR TRAILER SANITIZATION
SaniDate 5.0 may be used to sanitize and deodorize vehicles such as trucks, trailers, cabs, (including truck body parts and tires, mats, wheels). Use SaniDate 5.0 to prevent the cross contamination of bacteria, odor-causing fungus and mold between loads.

1. Before sanitation, move the vehicle into an area with an impervious surface and with controlled drainage. Ensure that no sanitization solution will be released into the environment.
2. Remove gross contamination with high pressure water and cleaner or other suitable detergent and rinse with water.
SANITIZATION OF FOOD CONTACT SURFACES

SaniDate 5.0 is effective sanitizer against Escherichia coli, Staphylococcus aureus and Escherichia coli O157:H7. Also effective against beverage spoilage organisms Pediococcus damnosus, Lactobacillus malefermentans, and Saccharomyces cerevisiae. SaniDate 5.0 is for use in circulation cleaning and institutional/industrial sanitizing of pre-cleaned, hard, non-porous food contact surfaces and equipment.

Use as a sanitizer on hard, non-porous surfaces as tanks, vats, piping systems, pipelines, beverage dispensing equipment, evaporators, filters, pumps, evaporators, clean-in-place systems, pasteurizers and aseptic equipment used in dairies, breweries, wineries, beverage and food processing plants, conveyors, boxing or packing equipment, peelers, corers, de-boners, scrapers, collators, slices, dicers, knives, saws, non-wooden cutting boards, tabletops, trays, pans, racks, platters, and cans.

Clean equipment immediately after use:
1. Remove all products from equipment unless treating only the return portion of a conveyor.
2. Remove gross food particulate matter and soil by a warm water flush, or pre-flush, or a pre-scrape and, when necessary, pre-soak treatment.
3. Thoroughly wash surfaces or equipment with a good detergent or compatible cleaning solution. Do not rinse.
4. Add 1.6 fl. oz. SaniDate 5.0 to 5 gallons of potable water, and apply by wiping, mopping, or coarse spray, or by adding to closed system.
5. If applicable, fill closed systems with diluted sanitizer solution at a temperature of 5°C (41°F) to 40°C (104°F).
6. Allow a contact time of one (1) minute.
7. Allow items and/or surfaces to drain thoroughly before resuming operation. Do not rinse.

Fogging Instructions: SaniDate 5.0 can be used as an adjunct to acceptable manual cleaning and sanitizing to treat hard, non-porous room surfaces.

1. Prior to fogging, remove or carefully protect all food product and packaging materials.
2. Prior to use of this product, remove gross contamination with a cleaner or other suitable detergent and rinse with potable water.
3. Ensure room is properly ventilated. Vacate all personnel from the room during fogging and for a minimum of 1 hour after fogging.
4. Fog desired areas using 1 quart per 1,000 feet of room area with a solution of 1.6 fl. oz. SaniDate 5.0 to 5 gallons of potable water.
5. Allow surfaces to drain thoroughly before operations are resumed.

SANITIZATION OF FOOD STORAGE AREAS

1. Remove all food prior to sanitization of food storage areas.
2. Prior to use of this product, remove gross contamination with a cleaner or other suitable detergent and rinse with potable water.
3. Apply 1.6 fl. oz. SaniDate 5.0 to 5 gallons of potable water with a mop, cloth, sponge, or hand trigger spray so as to wet all surfaces thoroughly.
4. Allow to remain wet with solution for one (1) minute.
5. Allow items and/or surfaces to air dry. No potable water rinse is required.

SANITIZING OF EATING ESTABLISHMENT EQUIPMENT such as plates, utensils, cups, glasses.

1. Scrape/pre-wash plates, utensils, cups, glasses, etc. whenever possible.
2. Wash all items with a detergent.
3. Rinse thoroughly with potable water.
4. Add 1.6 fl. oz. SaniDate 5.0 to 5 gallons of potable water. Immerse all items for at least 1 minute or for a contact time as specified by a local governing sanitizing code.
5. Place all sanitizing items on a rack or drain board to air dry. Do not rinse.

SANITIZING OF TABLEWARE IN LOW TO AMBIENT TEMPERATURE WARE WASHING MACHINES

1. Prepare solution by adding 1.6 fl. oz. SaniDate 5.0 to 5 gallons of potable water.
2. Inject solution into final rinse water. Solution must contact tableware for a minimum of 1 minute.
3. Place all sanitizing items on a rack or drain board to air dry. Do not rinse.

Fogging Instructions: SaniDate 5.0 may be used as an adjunct to acceptable manual cleaning and sanitizing to treat hard, non-porous room surfaces.

1. Prior to fogging, remove or carefully protect all food product and packaging materials.
2. Prior to use of this product, remove gross contamination with a cleaner or other suitable detergent and rinse with potable water.
3. Ensure room is properly ventilated. Vacate all personnel from the room during fogging and for a minimum of 1 hour after fogging.
4. Allow equipment to drain dry before using. Do not rinse.

GENERAL DISINFECTION

SaniDate 5.0 disinfects as it cleans in one operation. This product can be used to clean, disinfect, and deodorize floors, walls and other hard, nonporous surfaces such as tables, chairs, countertops, garbage bins/cans, bathroom fixtures, sinks, bed frames, shelves, racks, carts, refrigerators, coolers, glazed tile, and use sites listed on this label made of linoleum, vinyl, glazed porcelain, plastic polyethylene, stainless steel, or glass.

SURFACE DISINFECTION

Use SaniDate 5.0 as a disinfectant at a rate of 0.5 fl. oz. in 1 gallon of water. Apply solution with mop, cloth, sponge, brush, scrubber, or coarse spray device or by soaking so as to wet all surfaces thoroughly. Treated surfaces must remain wet for ten (10) minutes.

SaniDate 5.0 is effective sanitizer against the following bacteria and fungi:

- Aspergillus fumigatus
- Salmonella enterica
- Pseudomonas aeruginosa
- Klebsiella pneumoniae
- Staphylococcus aureus
- Listeria monocytogenes
- Enterobacter aerogenes
- Streptococcus agalactiae
- Bacillus melaninogenica
- Bordetella bronchiseptica
- Streptococcus uberis
- Fusobacterium necrophorum
- Streptococcus dysgalactiae
- Trichophyton mentagrophytes
- Methicillin-resistant Staphylococcus aureus (MRSA)
SaniDate 5.0 is effective against the following food and beverage spoilage organisms:

- *Pediococcus damnosus*
- *Saccharomyces cerevisiae*
- *Lactobacillus malefermentans*

**VIRICIDAL**

When used at the disinfectant rate of 0.5 fl. oz. per gallon of water, SaniDate 5.0 is an effective viricide against:

- Human Influenza Virus (H1N1)
- Canine Distemper Virus
- Avian Influenza Virus (H9N2)

This product may be used to clean, disinfect and deodorize inanimate hard surfaces in general commercial environments:

- Hospitals, doctor’s offices, dental offices, housekeeping services, physical therapy departments, nursing services, autopsy facilities, nursing homes, other healthcare facilities
- Schools, colleges, industrial facilities, dietary areas, office buildings, recreational facilities, health clubs, gyms, spas, retail and wholesale establishments
- Animal hospitals, veterinary clinics, animal life science laboratories, kennels, kennel runs, cotters, cages, feeding and watering equipment, pet shops, zoos, pet animal quarters, poultry premises, trucks, tractor trailers, hatcheries, live stock quarters, stables, stalls, and pens
- Packinghouses, food processing and rendering plants
- Grocery stores, supermarkets, food distribution and storage facilities
- Farms, farm equipment and harvesting equipment
- Commercial floral shops
- Hair salons/barber shops
- Pharmaceutical/cosmetic facilities
- Buses, taxis, trucks, trains, airplanes, public transportation facilities

Not for use on medical devices or medical equipment.

**COMBINATION DISINFECTION AND CLEANING**

Use a rate of 0.5 fl. oz. per gallon for hard, non-porous surfaces that are lightly soiled or have been pre-cleaned to remove gross contamination. For heavily soiled hard non-porous surfaces, a pre-cleaning step is required. Apply solution with mop, cloth, sponge, brush, scrubber, or coarse spray device or by soaking so as to wet all surfaces thoroughly. Allow surface to remain wet for ten (10) minutes, then remove solution and entrapped soil with a clean wet mop, cloth, or vacuum pickup. Prepare a fresh solution daily or when it becomes soiled or diluted. Applications involving treatment of food contact surfaces require a sterile or potable water rinse following disinfection.

**DISINFECTION OF POULTRY PREMISES, TRUCKS, COOPS, CRATES**

1. Before disinfection, move the vehicle into an area with an impervious surface and with controlled drainage. Ensure that no disinfection solution will be released into the environment.
2. Remove gross contamination with high pressure water and cleaner or other suitable detergent and rinse with water.
3. Apply SaniDate 5.0 using a coarse spray device at a rate of 0.5 fl. oz. per 1 gallon of water for a period of ten (10) minutes.
4. Rinse all treated surfaces that will contact food or commodities with potable water before use.

**ANIMAL HEALTH**

SaniDate 5.0 is designed for use in animal hospitals, animal laboratories, kennels, pet shops, zoos, pet animal quarters, poultry premises, poultry hatcheries, livestock and dairy quarters. When used as directed, it is specifically designed to disinfect, deodorize and clean inanimate, hard, non-porous surfaces such as walls, floors, sink tops, furniture, operation tables, kennel runs, cages and feeding and watering equipment. In addition it will disinfect bins and cans, and any other hard, non-porous areas that are prone to odors caused by microorganisms.

All treated equipment that will contact feed or drinking water must be rinsed with potable water before use.

For heavily soiled areas, a pre-cleaning step is required. Prepare a fresh solution for each use.

**DISINFECTION OF PHARMACEUTICAL AND COSMETIC SURFACES**

SaniDate 5.0 is recommended for use on hard, non-porous, environmental surfaces such as floors, walls and processing equipment in pharmaceutical and cosmetic processing facilities. This product is effective at 0.5 fl. oz. per gallon for pre-cleaned or lightly soiled surfaces to disinfect.
facilities occupied or traversed by poultry. 
3. Empty all troughs, racks and other feeding and 
watering appliances and equipment. 
4. Thoroughly clean all surfaces with soap or 
detergent and rinse thoroughly with water. 
5. Saturate all surfaces with a solution of 0.5 fl. 
 oz. per 1 gallon of water for a period of ten 
(10) minutes. 
6. Ventilate buildings, coops, and other closed 
spaces. Allow to dry before reintroducing 
eggs or poultry. 
7. Thoroughly scrub all treated feed racks, man- 
gers, troughs, automatic feeders, fountains 
and waterers with soap or detergent, and 
rinse with potable water before reuse.

TO FOG POULTRY PREMISES, TRUCKS, 
COOPS, CRATES
SaniDate 5.0 can be used as an adjunct to 
acceptable manual cleaning and disinfecting to 
treat hard, non-porous surfaces.

1. Clean out any remaining eggs and chicks. 
Remove all poultry and feeds from premises, 
trucks, coops and crates 
2. Remove gross soils, such as litter, droppings, 
down, shell fragments or other hatching relat- 
ed debris from floors, walls and surfaces of 
facilities occupied or traversed by poultry. 
3. Empty all troughs, racks and other feeding 
and watering appliances and equipment. 
4. Ensure room is properly ventilated. Vacate 
all personnel from the room during fogging 
and for a minimum of 1 hour after fogging, 
to ensure that there is no strong odor, which 
is characteristic of acetic acid, before having 
personnel return to work area. 
5. Fog desired areas using 1 quart per 1,000 
feet of room area with a solution of 1 fl. oz. 
of SaniDate 5.0 per gallon of potable water 
(0.25 fl. oz. per quart of potable water) or a 
dilution rate of 1:125. 
6. Ventilate buildings, coops, and other closed 
spaces for minimum of one hour. Allow 
surfaces to dry before reintroducing eggs or 
poultry.
7. Thoroughly scrub all treated feed racks, man- 
gers, troughs, automatic feeders, fountains 
and waterers with soap or detergent, and 
rinse with potable water before reuse.

DISINFECTION AND DEODORIZING OF 
ANIMAL HOUSING FACILITIES (BARNS, 
KENNELS, HUTCHES)
1. Remove all animals and feed from premises, 
vehicles and enclosures. 
2. Remove all litter and manure from floors, 
walls and surfaces of barns, pens, stalls, 
chutes, and other facilities occupied or 
traversed by animals. 
3. Empty all troughs, racks and other feeding 
and watering appliances. 
4. Thoroughly clean all surfaces with soap or 
detergent and rinse with water. 
5. Saturate all surfaces with a solution of 0.5 fl. 
 oz. per 1 gallon of water for a period of ten 
(10) minutes. 
6. Immerse all halter, ropes, and other types of 
equipment used in handling and restraining 
animals, as well as forks, shovels and scrap- 
ers used for removing litter and manure. 
7. Ventilate buildings, cars, boats and other 
closed spaces. Do not house livestock or 
employ equipment until treatment has been 
absorbed, set or dried. 
8. Thoroughly scrub all treated feed racks, man- 
gers, troughs, automatic feeders, fountains 
and waterers with soap or detergent, and 
rinse with potable water before reuse.

TERRARIUM AND SMALL ANIMAL CAGE 
DISINFECTION
1. Remove all animals and feed from enclosure 
to be cleaned. 
2. Thoroughly clean all hard, non-porous sur-
faces with soap or detergent and rinse 
with water. 
3. Saturate all surfaces (floors, walls, cages and 
other washable hard, non-porous environ-
mental surfaces) with a solution of 0.5 fl. oz. 
per 1 gallon of water for a period of ten (10) 
minutes. For smaller surfaces, use a trigger 
spray bottle to spray all surfaces with solution 
until wet. Then wipe surfaces dry.
4. Thoroughly scrub all treated surfaces with 
soap or detergent and rinse with potable 
water before reuse.
5. Do not return animals to the habitat until it is 
dry and ventilated.
6. Clean terrarium at least once weekly or more 
as needed.

FOOT BATH MATS, PADS, WALK 
THROUGH TRAYS
Place foot bath mats, pads or trays at the 
entrances of all rooms and buildings to prevent 
cross contamination from area to area in animal 
containment areas, livestock and dairy quarters, 
poultry premises, greenhouses, packing houses, 
food processing and rendering plants.

1. Prior to use of this product, rinse or brush 
footwear surfaces to remove gross filth. 
2. Make a solution using 0.5 – 1.0 fl. oz. of 
SaniDate 5.0 per gallon of water and 
add to foot bath mat, pad or tray, filling to 
capacity. 
3. Place boots and shoes in the foot bath mat, 
pad or tray containing the recommended 
solution of SaniDate 5.0. Allow surface to 
remain wet for ten (10) minutes prior to 
entering next area. Change solution daily or 
as needed.

For Foaming applications, add 2 - 4 fl. oz. per 
gallon of water mixed with foaming solution. 
Follow foaming directions as specified by the 
manufacturer of the foam generator/erator.

DISINFECTION OF WATER FILTER 
MEDIA, MEMBRANES AND RELATED 
COMPONENTS AND SYSTEMS
SaniDate 5.0 is an effective disinfectant used for the 
reduction and removal of bio-organisms on the 
surfaces of the filter and membrane media, 
media housings, and related devices and equip-
ment. It may be used for filter media or related 
system components or in Clean in Place (CIP) 
systems.

Disinfection and/or treatment of filter media 
and membrane in potable water systems should 
be performed when system is NOT in use or 
online.

For filter media disinfection applications, use a 
rate of 0.1 - 1 fl. oz. per gallon, and allow to 
soak for ten (10) minutes. Drain filter media and 
then rinse with clean water. Prior to producing 
product water (Permeate), test a sample of the 
permeate using BioSafe Systems Test Strips to 
determine the level of active ingredients remain-
ing in the permeate.

For clean in place (CIP) applications involving 
filters, use a rate of 2.5 to 10.25 fl. oz. per 100 
gallons. Recirculate solution for a minimum of 
10 minutes. Upon completion of cleaning cycle, 
flush filter housings and/or assemblies with 
clean water. Test a sample of water being used 
to flush filter media with BioSafe Systems Test 
Strips to determine levels of active ingredients 
remaining in the flush water.

For direct disinfection of membranes, use a 
solution of 0.1 fl. oz. per 1 gallon of water, 
or 0.5 fl. oz. for 5 gallons of water, within a 
pH range of 3-7 and maximum water tempera-
ture of 80 degrees F. Allow the membranes to 
soak for a minimum of 10 minutes. Flush or 
rinse membranes with clean water after treat-
ment. Test flush water with BioSafe Systems Test 
Strips to determine remaining active ingredient 
levels.

For membrane CIP systems, use a dilution rate 
of 2.5 – 10.25 fl. oz. per 100 gallons within a 
pH range of 3-7 and a maximum water tempera-
ture of 80 Degrees F. After thorough draining of 
the solution, rinse the media thoroughly with clean 
sterile water for a minimum of ten (10) min-
utes. Test sample of flush water with BioSafe 
Systems Test Strips to determine remaining active 
ingredient levels.

To calculate the amount of product to be used 
for CIP systems, identify total volume of all tanks, 
vessels and piping. Prepare dilution based on 
sum of all identified tank, vessel and piping 
volumes.

COMMERCIAL FLORIST USE DIRECTIONS
To clean, disinfect, and deodorize hard, non-
porous surfaces, prepare solution by adding 
0.5 - 1 fl. oz. for one gallon of water.
1. Remove all leaves, petals, garbage, and 
refuse. Pre-clean surfaces using pressurized 
water where possible.
2. Apply SaniDate 5.0 solution to hard 
(inanimate) non-porous surfaces thorough-
ly wetting surfaces as recommended and 
required with a cloth, mop, brush, sponge, 
or sprayer.
3. Allow treated surfaces to remain wet for ten 
(10) minutes.
4. Ventilate treated surfaces and allow to air 
dry.
5. Prepare a fresh solution at least daily or 
sooner if use solution becomes visibly dirty.
DISINFECTION OF HARD, NON-POROUS FOOD-CONTACT SURFACES IN FOOD PROCESSING PLANTS AND FOOD SERVICE ESTABLISHMENTS

Before using this product, food products and packaging materials must be removed from area or carefully protected.

1. Prior to use of this product, remove gross soil particles from surfaces to be treated. For heavily soiled surfaces, a pre-wash is required.
2. Apply 0.5 fl. oz of SaniDate 5.0 per gallon of water with a mop, cloth, sponge, or hand trigger spray so as to wet all surfaces thoroughly.
3. Allow to remain wet with solution for ten (10) minutes.
4. Rinse all treated surfaces thoroughly with potable water before operations are resumed.

DISINFECTION OF NON-FOOD CONTACT PACKAGING EQUIPMENT

1. Prior to use of this product, remove gross soil particles from surfaces to be treated. For heavily soiled surfaces, a pre-wash is required.
2. For disinfection, apply 0.5 fl. oz. of SaniDate 5.0 per gallon of water to surfaces at a temperature of 25° to 45° C.
3. Allow to remain wet with solution for ten (10) minutes.
4. Rinse surfaces thoroughly with potable water before operations are resumed.

PACKINGHOUSE, FOOD STORAGE FACILITIES, FOOD PROCESSING AND RENDERING PLANT DISINFECTION

Apply SaniDate 5.0 on all surfaces and equipment found in commercial packinghouses including dump tanks, drenches, crates, containers, conveyors, storages, walls, floors, and process lines.

Cover or remove all food and packaging materials before disinfection.

For Pre-Cleaned Surfaces: Use a rate of 0.5 fl. oz per gallon for hard non-porous surfaces that are lightly soiled or have been pre-cleaned to remove gross contamination.

To Fog Dairy, Beverage, Food Storage Facilities, Packing Houses and Food Processing Plants: SaniDate 5.0 can be used as an adjunct to acceptable manual cleaning and disinfecting to treat hard, non-porous room surfaces.

1. Remove gross filth from surfaces to be treated.
2. Prior to fogging, remove or carefully protect all food product and packaging materials.
3. Ensure room is properly ventilated. Vacate all personnel from the room during fogging and for a minimum of 1 hour after fogging, to ensure that there is no strong odor, which is characteristic of acetic acid, before having personnel return to work area.
4. Fog desired areas using 1 quart per 1,000 feet of room area with a solution of 1 fl. oz. of SaniDate 5.0 per gallon of potable water (0.25 fl. oz. per quart of potable water) or a dilution rate of 1:125.
5. Allow surfaces to drain thoroughly before operations are resumed. Any food contact surfaces must be rinsed with potable water prior to re-use.

Foaming Applications: Apply SaniDate 5.0 as a foam treatment to enhance contact on hard, non-porous surfaces, vertical surfaces and irregular surfaces such as metal grating and structural steel where contact is difficult to maintain with coarse spray treatments. Add a foaming agent to the spray tank that contains the diluted SaniDate 5.0 solution. Apply foam until the surface treated is completely covered. Allow foam treated surface to air dry. Do not rinse.

CONTROL OF ALGAL AND SLIME-FORMING BACTERIAL GROWTH IN INDOOR, CLOSED LOOP, NON-POTABLE, NON-FOOD CONTACT WATER SYSTEMS

TREATMENT OF COOLING WATER SYSTEMS (such as cooling towers, evaporative condensers).

Severely fouled systems should be cleaned before treatment. Discontinue use of chlorine or bromine products prior to using this product. SaniDate 5.0 should be added to the system directly and not mixed with other chemicals or additives prior to dosing. Other chemicals should be added separately. Check compatibility of SaniDate 5.0 with any other chemicals or additives prior to use. Contamination with certain chemicals could result in lack of efficacy. Add SaniDate 5.0 at a point in the system where uniform mixing and even distribution will occur such as the cooling tower basin sump. Shock doses may be applied for 1 to 2 hours, as necessary, whereas intermittent doses are applied for 5 to 60 minutes 1 to 100 times per day. For either shock, intermittent or continuous dosing, apply 4.5 to 22.5 fl. oz. of SaniDate 5.0 solution per 1,000 gallons of water. This will provide 25 to 176 ppm of SaniDate 5.0. For best results, where dump tanks are present at time of treatment, the most effective control will be obtained by breaking up algae mats and/or evenly dispersing diluted SaniDate 5.0 over the algae mats. Apply SaniDate 5.0 as needed to control and prevent algae growth; apply more often in times of higher water temperatures.

Use SaniDate 5.0 for the treatment of waters used in the handling, processing, packing or storage of raw fruits and vegetables. SaniDate 5.0 may also be used to control the growth of spoilage and decay causing bacterial and fungal diseases on post harvest fruits and vegetables. For post harvest applications, fruits and vegetables can be sprayed or submerged in the resulting solution for a minimum contact time of 45 seconds, followed by adequate draining.

Note: May cause bleaching of treated surfaces, test commodity if unsure.

TREATMENT OF FRUIT AND VEGETABLE PROCESSING WATERS

Use SaniDate 5.0 for the treatment of waters used in the processing of raw fruits and vegetables. Mix SaniDate 5.0 with water either batch-wise or continuously at a rate of 59.1 to 209.5 fl. oz. of SaniDate 5.0 solution to 1,000 gallons water. This will provide 462 to 1636 ppm of SaniDate 5.0, or 24 to 85 ppm 100% peracetic acid in the use solution. The fruits and vegetables can be sprayed or submerged in the resulting solution for a minimum contact time of 45 seconds, followed by adequate draining.

At this use dilution, SaniDate 5.0 will control the growth of spoilage and decay causing non-public health organisms in process waters and on the surface of fresh cut or post harvest fruits and vegetables. This product is not intended for control of any public health organisms on fruit and vegetable surfaces.

TREATMENT FOR NON-POTABLE WATER SYSTEMS (wash tanks, dip tanks, drench tanks, evaporators, humidification systems and/or storage tanks)

Treat water containing plant pathogens with 0.62-2.1 fl. oz. of SaniDate 5.0 for every 10 gallons of water or use a dilution rate of 1:620-1:2,200. This will provide 462-1636 ppm of SaniDate 5.0, or 24 to 85 ppm 100% peracetic acid in the use solution.

POST HARVEST SPRAY TREATMENTS ON PROCESS AND PACKING LINES

Inject SaniDate 5.0 directly into spray, misting, humidification, fogging and spray bar system make up system water on process and packing lines to prevent bacterial and fungal diseases on post-harvest fruits and vegetables. Inject at a rate of 1:250 - 1:2,500 concentrate to clean water. For best results, where dump tanks are used, make post harvest spray treatment as pro-
HARVEST POTATOES IN STORAGE

DIRECT INJECTION INTO STORAGE

HARVESTED POTATOES PRIOR TO SPRAY TREATMENTS FOR NEWLY AREAS AND EQUIPMENT

1. Remove all potatoes prior to disinfection of potato storage areas and equipment.
2. Prior to use of this product, remove gross soil particles from surfaces to be treated. For heavily soiled surfaces, a pre-wash is required.
3. Apply 0.5 fl. oz of SaniDate 5.0 per gallon of water with a mop, cloth, sponge, or hand trigger spray so as to wet all surfaces thoroughly.
4. Allow to remain wet with solution for ten (10) minutes.
5. Rinse all treated surfaces thoroughly with potable water before operations are resumed.

DISINFECTION OF POTATO STORAGE AREAS AND EQUIPMENT

Use SaniDate 5.0 to treat water to suppress / control algae, bacterial slime and odors, and sulfides in agricultural irrigation and drainage water and ditches. For irrigation water, apply 4.8 to 24 fluid ounces of SaniDate 5.0 per 1,000 gallons of water. For maintenance, treat clean water with a dilution of 1:2200 of SaniDate 5.0. For maintenance, treat clean water with a dilution of 1:22,000 to 1:44,000 of SaniDate 5.0 as needed, for the control of algae and bacteria.

CONTROL OF ALGAL AND SLIME-FORMING BACTERIAL GROWTH IN AGRICULTURAL IRRIGATION SYSTEMS AND WATER

FOR AGRICULTURAL IRRIGATION WATER AND DRAINAGE DITCHES

Use SaniDate 5.0 to treat water to suppress / control algae, bacterial slime and odors, and sulfides in agricultural irrigation and drainage water and ditches. For irrigation water, apply 4.8 to 24 fluid ounces of SaniDate 5.0 per 1,000 gallons of water. This amount will provide 2 – 10 ppm of 100% peroxyacetic acid. Product can be simply added to the body of water, as the residual control will allow for even distribution throughout the water column. Apply SaniDate 5.0 as needed to control and prevent algae growth; apply more often in times of higher water temperatures.

Water damage restoration

Use SaniDate 5.0 to control the growth of odor causing bacteria and fungi in water damage restoration situations. This product is suitable for use on hard, non-porous surfaces, along with the following porous and semi-porous materials: carpets, carpet cushion, sub floors, drywall, trim, frame lumber, tackless strip and paneling.

SEWER BACKUP AND RIVER FLOODING

(Not for use in California)

During mitigation procedures prepare a solution of SaniDate 5.0 by adding 1 fl. oz. of the product to 1 gallon of potable water, allowing for the diluting effect of absorbed water within the saturated materials. Remove heavy soil or gross filth from surfaces by cleaning with SaniDate 5.0溶液 by wiping, mopping, or as a coarse spray. Saturate all affected materials with the solution using a coarse spray before cleaning and extraction. Allow surfaces and materials to remain wet with solution for ten (10) minutes. Follow with a thorough extraction. Use proper ventilation.

CONTROL OF BACTERIAL GROWTH ON HARD, NON POROUS SURFACES

BACTERIOSTATIC (Not for use in California)

At 0.5 fl. oz. per 1 gallon of water, SaniDate 5.0 is effective at inhibiting the growth of bacteria when used in the presence of 400 ppm hard water and organic soil. This product can be used on floors, walls and other hard non-porous surfaces such as tables, chairs, countertops, bathroom fixtures, sinks, shelves, racks, carts, refrigerators, coolers, glazed tile, and use sites listed on this label made of linoleum, vinyl, glazed porcelain, plastic (such as polypropylene and polyethylene), stainless steel, or glass.

CHEMIGATION:

General Requirements -
1. Apply this product only through a drip system or sprinkler including center pivot, lateral move, end tow, side (wheel) roll, travelor, big gun, solid set, hand move,
serves an average of at least 25 individuals daily at least 60 days out of the year.
2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Do not apply when wind speed favors drift beyond the area intended for treatment.

Specific Requirements for Flood Chemigation -
1. Systems using a gravity flow pesticide dispensing system must meter the pesticide into the water at the head of the field and downstream of a hydraulic discontinuity such as a drop structure or weir box to decrease potential for water source contamination from backflow.
2. The systems utilizing a pressurized water and pesticide injection system must meet the following requirements:
   a. The system must contain a functional check valve, vacuum relief valve and low-pressure drain located appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
   b. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
   c. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
   d. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
   e. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
   f. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being filled with a system interlock.

Specific Requirements for Drip (Trickle) Chemigation -
1. The system must contain a functional check valve, vacuum relief valve and low-pressure drain located appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, sole-
Application Instructions -

1. Remove scale, pesticide residues, and other foreign matter from the chemical supply tank and entire injector system. Flush with clean water. Failure to provide a clean tank, void of scale or residues may cause product to lose effectiveness or strength.

2. Determine the treatment rates as indicated in the directions for use and make proper dilutions.

3. Prepare a solution in the chemical tank by filling the tank with the required water and then adding product as required. The product will immediately go into suspension without any required agitation.

4. Do not apply SaniDate 5.0 in conjunction with any other pesticides or fertilizers; this has the potential to cause reduced performance of the product. Avoid application in this manner.

CONTAINER DISPOSAL (Containers equal to or less than 5 gallons):
Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration. Do not burn, unless allowed by state and local ordinances.

CONTAINER DISPOSAL (Containers greater than 5 gallons):
Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution for 30 seconds. Stand the container on its end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration. Do not burn, unless allowed by state and local ordinances.

STORAGE AND DISPOSAL:
Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE:
Store in original containers in a cool, well-vented area, away from direct sunlight. Do not allow product to become overheated in storage. This may cause increased degradation of the product, which will decrease product effectiveness. In case of spill, flood area with large quantities of water. Do not store in a manner where cross-contamination with other pesticides or fertilizers could occur.

PESTICIDE DISPOSAL:
Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label directions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY:

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions For Use of this product should be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of BIOSAFE SYSTEMS LLC or Seller. All such risks shall be assumed by Buyer and User, and Buyer and User agree to hold BIOSAFE SYSTEMS and Seller harmless for any claims relating to such factors.

BIOSAFE SYSTEMS warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above when used in accordance with directions under normal use conditions. This warranty does not extend to the use of the product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or BIOSAFE SYSTEMS, and Buyer and User assume the risk of any such use. BIOSAFE SYSTEMS MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE, NOR ANY OTHER EXPRESSED OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

In no event shall BIOSAFE SYSTEMS or Seller be liable for any incidental, consequential or special damages resulting from the use or handling of this product. THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF BIOSAFE SYSTEMS AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF BIOSAFE SYSTEMS OR SELLER, THE REPLACEMENT OF THE PRODUCT.

BIOSAFE SYSTEMS and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of BIOSAFE SYSTEMS.
