Throughout this manual statements indicating precautions necessary to avoid equipment failure are referenced in a Note. Statements indicating potential hazards that could result in personal injury or property damage are referenced in a Caution! box.

This manual is property of the owner. Leave with the unit when set-up and start-up are complete. Donaldson Company reserves the right to change design and specifications without prior notice.
Caution!

Application of Dust Control Equipment

- Combustible materials such as buffing lint, paper, wood, aluminum or steel dust, weld fume, or flammable solvents represent fire or explosion hazards. Use special care when selecting and operating all dust or fume collection equipment when combustible materials are present to protect workers and property from damage due to fire and/or explosion. Consult and comply with National and Local Codes relating to fire or explosion and all other appropriate codes when determining the location and operation of dust or fume collection equipment.

- When combustible materials are present, consult with an installer of fire extinguishing systems familiar with these types of fire hazards and local fire codes for recommendations and installation of fire extinguishing and explosion protection systems. Donaldson dust collection equipment is not equipped with fire extinguishing or explosion protection systems.

- DO NOT allow sparks, cigarettes or other burning objects to enter the hood or duct of any dust or fume control equipment as these may initiate a fire or explosion.

- For optimum collector performance, use only Donaldson replacement parts.

Warning – Improper operation of a dust control system may contribute to conditions in the work area or facility that could result in severe personal injury and product or property damage. Check that all collection equipment is properly selected and sized for the intended use.
This manual contains specific precautionary statements relative to worker safety. Read thoroughly and comply as directed. Discuss the use and application of this equipment with a Donaldson representative. Instruct all personnel on safe use and maintenance procedures.
Description

The Vibra Shake, Model VS Collectors are high-efficiency, intermittent-duty dust collectors with cartridge-style filters for airflow ranging from 550 to 3,000 cfm. The patented, self-contained unit uses a high frequency, vibration filter cleaning system. A cellulose-based filter cartridge with a nylon mesh pre-filter provides optimum efficiency and ease of maintenance. The nylon mesh pre-filter accumulates a dust cake, and the cartridge acts as a cleanable secondary filter. The Vibra Shake dust collectors standard features include an acoustic-lined blower chamber and automatic filter cleaning.

Designed to increase the versatility of the unit, standard options include a variety of discharge arrangements, dust drawer or hopper-style cabinets, and 5- or 55-gallon dust disposal options.

Purpose and Intended Use

The two-stage filter design makes the VS collector especially effective on fibrous particulate or bimodal dust, which is a mixture of large and small particulate. The VS is for use on negative pressure systems only.

VS collectors are not recommended for applications with very fine, mono-sized nonagglomerative particulate such as welding fume. The filter cartridge will effectively filter the dust, but the high air-to-media ratios will not release the fine particulate from the filter during cleaning.

Typical VS applications include metal working, pharmaceutical, composite and precious metals industries.

Caution!

- Misuse or modification of this equipment may result in personal injury.
- Do not misuse or modify.
**Operation**

Dust enters through the cabinet inlet and passes through a fine mesh pre-filter on the outside of the filter. The pre-filter is spaced 1-in from the filter cartridge and is designed to catch fibrous dust while fine particulate passes through to collect on the outside surfaces of the filter cartridge. Clean, filtered air flows up through the center of the filter cartridge to the blower, through the silencer, and exits through the top clean-air outlet.

Model VS is an intermittent-duty collector, which means that cleaning starts when the fan is turned OFF and the appropriate fan run-down time is complete. The solid-state timer automatically starts the cleaning sequence 60-seconds after the fan is turned OFF for the VS-550, VS-1200, and VS-1500 and 180-seconds for Models VS-2400 and VS-3000. This is the fan run-down time. Power to controls must remain ON to operate cleaning mechanism.

The vibration motor starts and filter cleaning begins for a preset time of 30-, 60- or 90-seconds. A diaphragm at the bottom of the filter cartridge opens when the fan is turned OFF which allows fine dust particles to fall into the dust drawer or optional hopper for disposal.
Inspection on Arrival

1. Inspect unit on delivery.
2. Report any damage to the delivery carrier.
3. Request a written inspection report from the Claims Inspector to substantiate claim.
4. File claims with the delivery carrier.
5. Compare unit received with description of product ordered.
6. Report incomplete shipments to the delivery carrier and your Donaldson representative.
7. Remove crates and shipping straps. Remove loose components and accessory packages before lifting unit from truck.

Installation Codes and Procedures

1. Safe and efficient operation of the unit depends on proper installation.
2. Authorities with jurisdiction should be consulted before installing to verify local codes and installation procedures. In the absence of such codes, install unit according to the National Electric Code and NFPA No. 70-latest edition.
3. A qualified installation and service agent must complete installation and service of this equipment.

Installation

Site Selection, Grade-Mounted Units

1. The unit can be located on a reinforced concrete foundation or rooftop.
2. Wind, seismic zone, and other live-load conditions must be considered when selecting the location for rooftop-mounted units.
3. Provide clearance from heat sources and interference with utilities when selecting the location for suspended units.

Unit Location

1. When hazardous conditions or materials are present, consult with local authorities for the proper location of the collector.
2. Foundation or roof support must be sized to accommodate the entire weight of the unit, plus the weight of the collected material, piping, and ductwork.
3. Prepare the foundation in the selected location. Install anchor bolts to extend a minimum of 1 3/4-inches above foundation unless otherwise indicated on the Specification Control drawing.
4. Locate the collector to ensure the shortest and straightest inlet- and outlet-duct length, easy access to electrical and compressed-air connections, and routine maintenance.

Caution!

- Combustible materials such as buffing lint, paper, wood, aluminum or steel dust, weld fume, and flammable solvents represent fire or explosion hazards.
- Use special care when selecting and operating all collection equipment when combustible materials are present to protect workers and property from damage due to fire and/or explosion.
- Consult and comply with all National and Local Codes relating to fire or explosion, and all other appropriate codes when determining the location and operation of dust collection equipment.
- Donaldson equipment is not equipped with fire extinguishing or explosion protection systems.
- OSHA may have requirements regarding recirculating filtered air in your facility. Consult with the appropriate local authorities to ensure compliance with all codes regarding recirculating filtered air.
**Electrical Wiring**

**Caution!**
- Electrical installation must be performed by a qualified electrician and comply with all applicable national and local codes.
- Lock out electrical power sources before performing service or maintenance work.
- Do not install in classified hazardous atmospheres without an enclosure rated for the application.

1. All electrical wiring and connections, including electrical grounding, should be made in accordance with the National Electric Code, NFPA No. 70-latest edition.

2. Check local ordinances for additional requirements that apply.

3. The appropriate wiring schematic and electrical rating must be used. See unit’s rating plate for required voltage.

4. If the unit is not furnished with a factory-mounted disconnect, an electric disconnect switch having adequate amp capacity shall be installed in accordance with Part IX, Article 430 of the National Electrical Code, NFPA No. 70-latest edition. Check unit’s rating plate for voltage and amperage ratings.

5. Refer to the wiring diagram for the number of wires required for main power wiring and remote wiring.

**Rigging Instructions**

**Suggested Tools & Equipment**

- Clevis Pins and Clamps
- Lifting Slings
- Crane or Forklift
- Pipe Sealant
- Drift Pins
- Pipe Wrenches
- Drill and Drill Bits
- Screwdrivers
- End Wrenches
- Socket Wrenches
- Large Crescent Wrench
- Spreader Bars

**Hoisting Information**

**Caution!**
- Failure to lift the collector correctly can result in severe personal injury or property damage.
- Use appropriate lifting equipment and adopt all safety precautions needed for moving and handling the equipment.
- Location must be clear of obstructions, such as utility lines or roof overhang.

1. Use all lifting points provided.

2. Use clevis connectors, *not hooks*, on lifting slings.

3. Use spreader bars to prevent damage to units casing.

4. Check the Specification Control drawing for weight and dimensions of the unit, subassemblies, and components to ensure adequate crane capacity.

5. Refer to applicable OSHA regulations and local codes when using cranes, forklifts, and other lifting equipment.

6. Lift unit and accessories separately, and assemble after unit is in place.

7. Use drift pins to align holes in section flanges during assembly.

**Caution!**
Secure the upper portion of the collector to the forklift mast. The collectors have a high center-of-gravity and may overturn if not secured properly.
Standard Equipment

Dust Drawer Units

Standard equipment consists of a self-contained unit housing the filters, blower, clean- and dirty-air chambers, and dust drawers. Locate the unit as close to the dust source as possible, except where explosive or flammable material exists.

Hopper and Leg Installation

1. Prepare foundation in the selected location. Install anchor bolts to extend a minimum of 1 3/4-in above foundation.
2. Lift the hopper using a crane.
3. Stand each leg on its pad in position under hopper.
4. Use drift pins to align holes in the hopper with the holes in the legs.
5. Secure legs to hopper using bolts, washers, and nuts provided. Do not tighten hardware at this time. Do not remove crane.
6. Position and bolt the cross brace in place using the hardware provided. Do not tighten hardware.
7. Bolt inside and outside cross braces together where they form a X. Do not tighten hardware.
8. Lift the hopper and leg assembly and lower slowly to the anchor bolts.
9. Level the hopper at the top flange using steel shims if necessary. Secure leg pads to anchor bolts with the appropriate customer-supplied washers and nuts.
10. Tighten all hardware on the legs, cross braces, and anchor bolts. Recheck level and adjust as necessary.
11. Remove crane.

VS-550  VS-2400
Cabinet Assembly

1. Place 1/4-in diameter, rope-type sealant around the hopper’s top flange toward the outside of the bolt pattern.
2. Lift the cabinet into position over the leg and hopper assembly and lower slowly.
   **Note:** Access the lifting lugs on VS-2400 and VS-3000 by removing the top cover panel. Lifting lugs are located on the blower support panel.
3. Align the holes in the hopper flange with the holes in the cabinet and secure using the hardware supplied.
   **Note:** Inlet collars can be located on any side of the VS-500, -1200, or -1500 hopper by removing the cover plate.

Ductwork

- Locate the unit to ensure the shortest duct lengths.
- Elbow radius should be two times the duct diameter.
- Maximum 30° branch entries.
- Avoid using tees.
- Connect duct joints with sheet metal screws, rivets, or solder and finish with a single wrap of duct tape.
- Size all ductwork for the air velocity recommended for the material conveyed.
Electrical Connection

**Caution!**

- Electrical installation must be performed by a qualified electrician and comply with all applicable national and local codes.
- Lock out electrical power sources before performing service or maintenance work.
- Do not install in classified hazardous atmospheres without an enclosure rated for the application.

1. Using the wiring diagram supplied, wire the customer-supplied disconnect switch and fan starter. Make the connections to the fan motor, and control box. Use appropriate wire gauge for rated amp load as specified by local codes.

2. Turn the fan motor ON then OFF to check for proper rotation by referencing the rotation arrow located on the motor’s mounting plate.

   **To reverse rotation, three-phase power supply:**
   Turn electrical power OFF at source and switch any two leads on the output-side of the fan-motor starter.

**Caution!**

- **Do not** look into fan outlet to determine rotation.
- Check that the exhaust plenum is free of tools or debris before checking blower/fan rotation.
- Stand clear of exhaust to avoid personal injury.

Cleaning Operation

1. Unit shutdown.
2. Rundown time: 60-second, single shaker motor; 180-second, double shaker motor.
3. 60-second cleaning cycle.
4. No time delay on start-up. If start-up is initiated during the cleaning operation, the shaker motor will turn OFF.

Timer Connection

M1 White and black motor leads factory wired, single and double shaker motor.
M2 White and black motor leads factory wired, double shaker motor only
L1 Black 115-Volt line voltage IN, factory wired.
L2 White 115-Volt line voltage IN, factory wired.
Note: In grounded systems, connect L2 to the transformer’s 110-V neutral terminal.
L3 Factory wired pressure switch.

Wiring Diagram
Optional Equipment

55-Gallon Drum Pack

The drum pack is designed to fit a customer-supplied, standard 55-gallon drum and provides easy access for dust removal and disposal. A flexible hose connects the drum cover hopper. Placing a pallet under the drum allows heavier materials to be moved quickly using a forklift or pallet jack. If a pallet is used, the length of flexible hose may need to be shortened.

1. Place 1/4-in diameter, rope-type sealant between the hopper flange and the drum cover mounting flange toward the inside edge of the bolt pattern.
2. Fasten using the bolts, washers, and nuts supplied.
3. Attach the drum cover to the 55-gallon drum.
4. Use latches to secure the cover to the drum, if equipped.

Drum Cover Assembly

Drum Cover with Slide Gate Assembly

55-Gallon Drum Pack with and without Slide Gate
5-Gallon Pail Pack

1. Apply sealant to the hopper flange or the pail cover mounting plate flange toward the inside edge of the bolt pattern.

2. Fasten the pail pack to the hopper using the bolts, washers, and nuts supplied.

5-Gallon Pail Pack with and without Slide Gate
Preliminary Start-Up Check

1. Check all electrical connections for tightness and contact.
2. Check for and remove all loose items in or near the inlet and outlet of the unit.
3. Check that all remote controls are wired into the control system, and all service switches are in the OFF position.
4. Check that all optional accessories are installed properly and secured.
5. Check that hopper discharge is open and the storage container is sealed, if equipped. Excess airflow to the blower will cause electrical failure.
6. Turn power ON at source.
7. Turn the compressed-air supply ON. Adjust pressure regulator for 90 to 100-psig.
8. Turn the fan motor ON then OFF to check for proper rotation by referencing the rotation arrow located on the motor’s mounting plate.

To reverse rotation, three-phase power supply:

Turn electrical power OFF at source and switch any two leads on the output-side of the fan-motor starter.

9. Adjust the blower/fan for proper airflow by adjusting the volume control damper on the blower/fan discharge, if equipped.

Note: Excess airflow can shorten filter life, cause electrical system failure, and blower motor failure.

Service Information

Caution!

- Lock out electrical power sources before service or maintenance work is performed.
- Turn compressed-air supply OFF and bleed lines before servicing.

Operational Checklist

1. Monitor overall performance of the collector.
4. Monitor dust disposal.

Dust Disposal

1. Turn unit OFF and empty dust container as necessary to minimize dust in the hopper.
2. If the optional 5- or 55-gallon drum attachment is used, empty when drum is 2/3 full.
3. If optional slide gate is used, close gate before servicing drum.
4. Reinstall drum and open gate.

Caution!

- Do not look into fan outlet to determine rotation.
- Check that the exhaust plenum is free of tools or debris before checking blower/fan rotation.
- Stand clear of exhaust to avoid personal injury.
Filter Replacement

Prefilter

1. Remove the nylon mesh prefilter and wash in cold water.

   Note: Hot or warm water will shrink the prefilter.

2. Reinstall the prefilter placing the top edge against the upper end cap of the filter cartridge. Stretch the screen for a tight fit and secure Velcro®.

   Note: The prefilter must cover all holes in the perforated liner. Stretch to fit.

Filter Cartridge

Caution!

- Use proper safety and protective equipment when removing contaminants and filters.
- Dirty filters may be heavier than they appear.
- Use care when removing filters to avoid personal injury.
- Do not drop filters.

1. Disconnect electrical power.

2. Open and remove the bottom access door and set aside.

3. Loosen four filter support knobs.

4. Turn the retaining ring counterclockwise to release the ring and filter.

5. Remove the retaining ring and filter and dispose of filter properly.

6. Check the gasket surface on the shaker panel and clean as necessary.

7. Install new filter reusing the retaining ring and tighten the four filter support knobs by hand.

8. Check the door gasket for condition and replace as necessary.

9. Replace bottom access door and secure with latches.

   Note: Slight bleed-through on new filters is normal and will disappear as the filter seasons.
Control Box

See Detail

Control Box Assembly

Single VS-550, 1200, and 1500
Switches preset to OFF position.
Default set to 60-sec wait, 60-sec clean.

Double VS-2400 and 3000
Switch 1 to ON position.
Set to 180-sec wait, default 60-sec clean.

Note: F2 and F3 present on units with optional transformer only
**Shaker Assembly**

- Shaker bar
- Jam nut
- Shaker spring
- Cotter pin

**Pressure Switch Connection**

- 3/16-in ID tubing
- Connect to high pressure port
- Pressure switch
- Low-pressure port
- Open to clean-air chamber
- Control box

---

**Ambient Pressure Switch**

- Clean-air chamber
- Dirty-air chamber

**Delta Pressure Switch**

- Pressure switch
- Control box
- 3/16-in ID tubing
- Connect to high pressure port
- Clean-air chamber
- Dirty-air chamber

---

Eccentric: shaker bar must be at the lowest position of the shaft rotation to position the shaker ring. Adjust using jam nuts to .125 +-.005-in gap all around. Four 1/8-in drill bit equally spaced at 90° can be used to maintain gap.

Shaker motor not wired correctly  
See Electrical Connection on Page 10.

Faulty shaker motor  
Replace.

Pressure switch tubing not installed correctly  
Check tubing connection and condition. Do not kink or pinch tubing. Note: the main blower fan must be ON for a minimum of 30-seconds for the timing sequence to start.

Faulty pressure switch  
With power to the timer board ON, remove the two wires from the pressure switch. Using a small wire, jumper across the end of the two white wires and maintain contact for at least 30-seconds. Remove the jumper wire and wait 60-seconds for VS-550, 1200, and 1500 or 180-seconds for VS-2400 and 3000. If the shaker motor starts, replace the pressure switch.

The Donaldson Torit Warranty

Donaldson warrants to the original purchaser that the major structural components of the goods will be free from defects in materials and workmanship for ten (10) years from the date of shipment, if properly installed, maintained and operated under normal conditions. Donaldson warrants all other Donaldson built components and accessories including Donaldson Airlocks, TBI Fans, TRB Fans, Fume Collector products, Donaldson built electrical control components and Donaldson built Afterfilter housings for twelve (12) months from date of shipment. Donaldson warrants Donaldson built filter elements to be free from defects in materials and workmanship for eighteen (18) months from date of shipment. Donaldson does not warrant against damages due to corrosion, abrasion, normal wear and tear, product modification, or product misapplication. Donaldson also makes no warranty whatsoever as to any goods manufactured or supplied by others including electric motors, fans and control components. After Donaldson has been given adequate opportunity to remedy any defects in material or workmanship, Donaldson retains the sole option to accept return of the goods, with freight paid by the purchaser, and to refund the purchase price for the goods after confirming the goods are returned undamaged and in usable condition. Such a refund will be in the full extent of Donaldson’s liability. Donaldson shall not be liable for any other costs, expenses or damages whether direct, indirect, special, incidental, consequential or otherwise. The terms of this warranty may be modified only by a special warranty document signed by a Director, General Manager or Vice President of Donaldson. Failure to use genuine Donaldson replacement parts may void this warranty. THERE EXIST NO OTHER REPRESENTATIONS, WARRANTIES OR GUARANTEES EXCEPT AS STATED IN THIS PARAGRAPH AND ALL OTHER WARRANTIES INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, WHETHER EXPRESS OR IMPLIED ARE HEREBY EXPRESSLY EXCLUDED AND DISCLAIMED.
